FINE ADJUSTMENT SYSTEM OF THE NEEDLE GUARD ON VERTICAL ROTARY HOOKS

It is well known that lock stitching is created when the hook point grazes the needle, and catches the loop formed by the needle thread.

The innovative idea of the **CM Cerliani** patent produces a fine adjustment of the peripheral needle guard fastened with only two screws to the hook, without the necessity of the third screw for the mere adjustment function and thus applicable on all existing vertical hooks. Furthermore, the patented method turns out to be simpler and more economic, needing one less screw than the known system and allowing the adjustment of the needle guard directly on the sewing machine.

The needle guard, bent naturally inwards, is forced outwards by unscrewing the adjusting screw placed between the fastening screw and the point of the needle guard in correspondence with the hook point, thus obtaining the necessary adjustment without need to take off the hook.

The innovation produced by this patent allows the fitters and technical assemblers to adjust with precision the needle guard through a simple cheap and reliable operation.

CM Cerliani: we invent.... the others try to follow us!

Ask for this feature as "R" version hook

Italian Pat.:1.338.887 / USA Pat.: 6.748.887 / China Pat.: ZC03100217.X / etc.

CERLIANI introduces Hooks, Bobbin cases and Shuttles exclusively of our own production. For their fabrication we guarantee the use of quality choice materials and the constant precision in each phase of manufacturing, so as to insure that each piece will function perfectly as to the smooth sliding, quietness and long durability. Our technical expertise if requested, can be used for the design and machining of special parts for specific technical requirements. For these reasons our special attention to quality becomes guarantee of the effective economy of the products.

Product line description

	CB Shuttle	Horizontal Rotary Hook	Vertical Rotary Hook
KH Hook to use with bobbin case/cap			
KP Bobbin case/Cap			
KK Hook to use with bobbin case/cap complete with bobbin case/cap			
KL Complete capless hook (hook with drop-in bobbin case)			

Item list (Reader's guidance)

- 2013 PRODUCTION -

Type of CM Article (see previous page)

KK = Hook to use with bobbin case/cap complete with bobbin case/cap
KL = Complete capless hook (hook with drop-in bobbin case)

KH = Hook to use with bobbin case/cap
KP = Bobbin case/Cap

Type of gib (only for the rotary hooks):

Short gib (A TYPE): for sewing heavy materials.

Full gib (B TYPE): for general sewing from light to heavy materials.

Shorten full gib (B TYPE): It is a little bit shorter than the full gib.

Tacking gib (C TYPE): for sewing medium and light materials.

Jam proof gib (D TYPE): this gib is fitted to our jam proof range of hooks (our exclusive patent for a long time). It is connected to the hook body by three screws and three coil springs. If the sewing thread gets caught in the raceway the special mechanism allows the thread to get out without having to remove or dismantle the hook.

Diameter of hole/shaft of the CM Article (HOOK only), measured in mm

Type of bobbin braking system (For Bobbin Case/Cap only):

MF = Bobbin Case with adjustable no backlash spring. **NBL** = Bobbin Case with no-backlash spring.

Magnet = Bobbin Case with magnet to brake the bobbin.

-- = Bobbin Case without any NBL/braking system of the bobbin.

Relation between hook point and needle passing window:

FA = The hook point is at the same level as the bottom of the needle passing window.

FA is suited for needles with thickness 70 through 100 (metric, corresponding to American Singer sizes 10 through 16) and is used for all generic stitching on normal fabrics.

FB = The hook point is higher than the bottom of the needle passing window.

FB is suited for needles with a very deep groove, such as Singer MR, Schmetz SERV 7 or Groz-Beckert SAN as well also for needles with thickness 120 through 160 (metric, corresponding to American Singer sizes 19 through 23).

SPECIAL COATINGS

ASPECT	- NAME OF COATING - APPLICATION	PROPERTIES	PERFORMANCES	LUBRICATION	APPLICATION FIELDS
STANDARD COATING					
-shining	<p>Hard chromium</p>  <p>-on the basket</p>	<ul style="list-style-type: none"> -high hardness (1050 HV) -high coating thickness (0.02mm) -Galvanic chromium coating 	<ul style="list-style-type: none"> -low friction coefficient -dry sewing with little oil up to 800 ÷ 1000 stitches per minute -sewing up to 6000 stitches per minute with regular lubrication -smooth rotation between basket and hook -proven reliability 	-not necessary within the indicated conditions.	Every Field: From household sewing machines to high speed machines.
SPECIAL COATING ON REQUEST					
-dull black	<p>TS</p>  <p>-on the basket</p>	<ul style="list-style-type: none"> -low hardness -high coating thickness (0.2 mm) -PTFE structure on chromium substratum 	<ul style="list-style-type: none"> -low friction coefficient -dry sewing with little oil up to 800 ÷ 1000 stitches per minute -smooth rotation between basket and hook -proven reliability 	-not necessary	<ul style="list-style-type: none"> -in embroidery to improve the sewing qualities -in light dry sewing at limited speed with low thread tensions
-glossy yellow-gold	<p>TTN</p>  <p>-on the basket</p>	<ul style="list-style-type: none"> -high hardness (2500 HV) -very thin coating thickness (4 µm) -TiN structure (Titanium Nitride) 	<ul style="list-style-type: none"> -dry sewing up to 3500 stitches per minute -sewing with reduced lubrication up to 4500 stitches per minute -sewing with low tensions up to 6000 stitches per minute with regular lubrication -low friction coefficient in any working condition -wear-resistance of the basket -proven reliability 	-not necessary within the indicated limits. One drop of oil every 8 hours enhances however the performance	<ul style="list-style-type: none"> -in light sewing for a high stitching quality with low thread tensions -in sewing with synthetic threads -in the corsetry field -in applications with overheating problems of the hook
-glossy black	<p>DC20</p>  <p>-on the basket</p>	<ul style="list-style-type: none"> -extreme high hardness (3000 HV) -very thin coating thickness (3 µm) -layer structure 	<ul style="list-style-type: none"> -dry sewing up to 3500 stitches per minute. Peaks up to 4000 stitches per minute are possible. -low friction coefficient -high wear-resistance of the basket -long service life even with dry sewing -reliability 	-not necessary within the indicated conditions. If present, it can enhance the performances of endurance and smoothness	<ul style="list-style-type: none"> -medium-heavy sewing with wear problems of the race and excessive increase of the play -where it is necessary to replace often the basket due to the wear -embroidery with dry stitching for a long service life of the hook.
-glossy black	<p>DC10</p>  <p>-on the hook body, gib and basket</p>	<ul style="list-style-type: none"> -extreme high hardness (3000 HV) -very thin coating thickness (3 µm) -uniform structure 	<ul style="list-style-type: none"> -dry sewing up to 4000 stitches per minute -low friction coefficient -extremely high wear-resistance of the whole hook through coating both race and hook point -very long service life (effect is even more evident when abrasive threads are used) -proven reliability 	-not necessary within the indicated conditions. If present, it can enhance the performances of endurance and smoothness	<ul style="list-style-type: none"> -in the presence of very abrasive threads (very heavy sewing) -where dry sewing at high speed is required -where there are problems of great wear also on the point of the hook

Noiseless Hook

Since its foundation **CM CERLIANI** has always made Customer Service a business philosophy; many specific requests of sewing machines manufacturers and end-users around the world have been developed over the years by **CM CERLIANI**® Engineering Department.

The hook noisiness has always been a very important factor in the evaluation of a high quality hook, but becomes a real necessity in some specific fields of application. The specific demand of some of the largest manufacturers of quilting machines in the world gave way for the development of a set of **CM CERLIANI**® patents to achieve:

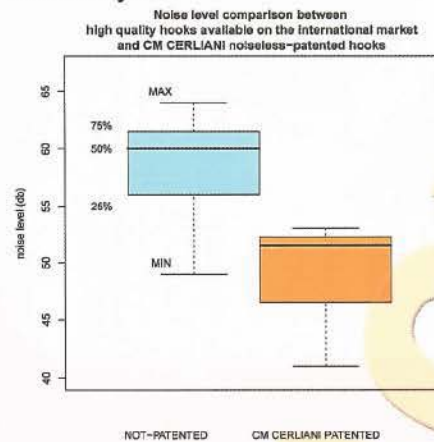

THE NOISELESS HOOK!

The purpose is attained through various details which have the purpose of reducing the noise generated respectively by the coupling between hook body and basket and between basket and bobbin case.

The first part of the implementation, thanks to special magnets, significantly reduces the vibrations of the basket rotating in the race of the hook body, which is the main cause of noise.

CM CERLIANI® developed and patented several designs of this technique using magnets of different shape and size, depending on the type and the dimensions of the different hooks. The most applied solution is that of a toroidal shaped magnet (i.e. as a ring) that is recessed into the inside bottom of the hook body, conveniently modified for this purpose. The magnet attracts the steel basket gently and significantly reduces vibrations during sewing.

Rigorous statistical analysis performed by the University of Lugano, Switzerland, conducted on random samples (of sufficiently large size to generate a 99% confidence level on the reached conclusions), show, without a doubt, the effectiveness of this patent in the reduction of the noise emitted by the hook in comparison to both, **CERLIANI** hooks without patent, and other quality hooks on the market. For example, in the specific case of large capacity hooks used in quilting machines, the noise level of the hooks of well-known, high quality brands ranges from 49 dB to 64 dB (with the hook rotating at 3,000 rpm), with an average of 59 dB (the observed median is 60 dB, meaning that at least 50% of the tested hooks have a noise level higher than 60 dB). With the **CM CERLIANI**® noiseless-patented hook, the upper bound of the noise level is decreased to 51.9 dB, with an average noise level of 49.5 dB (and the median goes down to 51.5 dB, meaning that at least 50% of the sampled **CM CERLIANI**® hooks have a noise level less than 51.5 dB). The conclusion of the statistical analysis by the University of Lugano is that the average noise level has been reduced by 9.5 dB and that the "noiseless-patent by **CM CERLIANI**® has consistently and steadily reduced the noise level of their hooks compared to all other high quality hooks available on the international market and considered in this analysis".

The second part of the implementation, thanks to special gaskets, eliminates the noise generated by the play existing in the coupling between the bobbin case and basket, which is a secondary, but significant, cause of the noise generated by the hook while sewing. **CM CERLIANI**® has developed and patented various executions of this technique, through the use of gaskets of different shape and size in relation to the type and to the overall dimensions of the different hooks. The most applied solution is that of an O-ring that is recessed on the internal diameter of the basket, suitably modified for this purpose. The gasket exerts a slight pressure on the bobbin case and reduces vibration while sewing, until eliminating the noise generated by its banging against the basket during sewing. The rigorous testing and subsequent analysis of the results show that this patent completely neutralizes the source of secondary noise generated by the collisions between bobbin case and basket. In practice, it reduces the overall noise generated by the hook of about 2 dB! This noise reduction is much more noticeable at low operating speed of the sewing machine (as it is the case with quilting machines and embroidery machines), as at low speeds the noises generated by all the rest of the sewing machine are minor and also in some cases the sewing speed is close to one of the vibration frequencies characteristic of the bobbin case – basket system.

The noise reduction is particularly appreciated by end-users who work in quiet environments and with only one or a few sewing machines, as typically home users, professionals, craftsmen and small business owners.

Since the design of the hook must be modified to accommodate the magnet system, ask **CM CERLIANI**® Sales Department if your required hook is already available in the "Noiseless" version.

The code of each hook in the patented "Noiseless" version, is found by adding the final letter "L" to the standard hook code.

Example:
 Standard hook: 130.09.539
 Noiseless patented hook: 130.09.539L

Ask for this feature as "L" version hook
Noiseless Hook.....for quieter sewing!

Italian Pat.: MI2008A002105 / European Pat.: 2189565
