IDENTIFICATION OF MACHINES

Each Union Special machine is identified by a Style number which is stamped into the name plate.

Machines similar in construction are grouped by a Class number, which contains no letters. Example: "51200". Letters suffixed to a Class number indicates the standard Style of a machine. Example: "51200 BA". Letter "Z" is reserved as a suffix to the standard Style identification to specify machine is of "Special" construction. Example: "51200 BAZ".

APPLICATION OF CATALOG

This catalog is a supplement to Catalog No. 104 L, and should be used in conjunction therewith. Only parts found on Styles 51200 BA and 51200 BY, but not on Style 51200 BM, are illustrated.

This catalog applies specifically to the standard Styles of machines as listed herein, and can also be applied with discretion, to some Special machines of Class 51200. References to direction, such as right, left, front, back, etc., are taken from the operator's position while seated at the machine. Operating direction of handwheel is toward the operator.

STYLES OF MACHINES

High Speed Streamlined Flat Bed, Medium Throw, Top Feed, One Needle, Light Weight Presser Bar and Needle Bar Driving Mechanism, Needle Bearing Needle Bar Drive, Single Reservoir Enclosed Automatic Lubricating System and Filter Type Oil Return Pump, Oil Pump Base Plate, Lateral Looper Travel.

51200 BA For attaching soles to uppers of felt slippers and similar operations on medium to medium heavy weight materials. Seam specification 401-SSa-1. Stitch range 7 to 16 per inch.

51200 BY For closing shoes and for similar operations on medium to medium heavy weight materials.

NEEDLES

Each Union Special needle has both a type number and a size number. The type number denotes the kind of a shank, point, length, groove, finish and other details. The size number, stamped on the needle shank, denotes the largest diameter of the blade measured in thousandths of an inch midway between the shank and the eye. Collectively, the type number and size number is the complete symbol.

To have needle orders promptly and accurately filled, forward a sample needle, the empty package, or description on label. A complete order would read as follows: "1000 Needles, Type 506 GS, Size 040".

Type No.	Description and Sizes
506 GS	Round shank, rocked point, extra short, double groove, struck groove, ball eye, chromium plated - sizes 032, 036, 040, 044, 049.

Standard needle for Styles 51200 BA and 51200 BY is Type 506 GS in sizes 040 and 036 respectively.

NEEDLES (Continued)

Selection of the proper needle size should be determined by size of thread used. Thread should pass freely through the needle eye in order to produce a good stitch formation.

For best results, use only genuine Union Special needles in the operation of these machines. They are packaged under our brand name, *Union Special* which is backed by a reputation for producing highest quality needles for more than three-quarters of a century.

IDENTIFYING PARTS

Where construction permits, each Union Special part is stamped with its catalog number. A part too small for its complete catalog stamping is identified by a letter symbol which distinguishes it from another part similar in appearance.

Each part number represents the same part regardless of catalog in which it appears.

IMPORTANT! ON ALL ORDERS, PLEASE INCLUDE PART NAME AND STYLE OF MACHINE FOR WHICH PART IS ORDERED.

TERMS

Prices are strictly net cash and are subject to change without notice. All shipments are forwarded f. o. b. shipping point. Parcel Post shipments are insured unless otherwise directed. A charge is made to cover postage and insurance.

OILING

The oil has been drained from the machine before shipping, and the reservoir must be filled before beginning to operate. Use a straight mineral oil with a Saybolt viscosity of 200 to 250 seconds at 100° Fahrenheit.

Oil is filled at the spring cap in the top cover and the level is checked at the sight gauge on the front of the machine. The oil level should be maintained between the red lines on the gauge. The capacity of the oil reservoir is 12 ounces.

The machine is automatically lubricated and no oiling, other than keeping the main reservoir filled, is necessary.

A daily check before the morning start should be made and oil added if required. Oil which has gone through the machine is filtered and pumped back into the main reservoir, making too frequent oilings unnecessary. Excessive oil in the main reservoir may be drained at the plug screw in the main frame directly under the handwheel.

The following is a numerical list of the parts in this machine. Quantities, part numbers, and descriptions are given. Following the parts list are photographs of some of the major parts.
