Union Special Wants to Help You Cut Sewing Machine Maintenance Costs

Union Special is offering two practical systems to help pinpoint and reduce your sewing machine maintenance costs: a record keeping system to help spot machines requiring abnormally high maintenance, and a parts inventory system to speed routine repairs.

Machine Maintenance Records

Repair-prone machines or inexperienced competent operators can eat up your maintenance dollars in short order. To help spot these problems, Union Special suggests two variations of a simple maintenance record keeping system using cards provided by Union Special.

The first system utilizes a "Machine Maintenance Record" card (Form 237) for each sewing machine in a plant. When a repair is required, the card is pulled from the file and the repair date, parts used, and their cost are entered in the spaces provided and the card is refiled.

**FORM 237—
Machine Maintenance
Record card**

The second system is normally used when more detailed information on repair costs is desired. Two record cards are used: a "Repair Request Card" (Form 234), and a "Machine Repair Record" (Form 233). When a machine requires service, the forelady or foreman fills out the top of a "Repair Request Card" and gives it to a mechanic. He fills in the time the repair work is started, the parts used and their cost,

and the completion time. This data is then transferred to the permanent "Machine Repair Record" kept in the office.

Whichever system is used, management now has an invaluable tool to reduce needless maintenance costs.

Repair Part Inventories

While record keeping tells management which machines require abnormally high maintenance, it does little to help reduce the downtime caused by routine repairs. To alleviate this situation, Union Special recommends that manufacturers establish a formal parts inventory system for each type of sewing machine they operate.

Excessive machine downtime and wasted hours by mechanics can be eliminated with an orderly in-plant inventory of the most commonly needed parts. There is no longer a need to cannibalize other machines for spare parts. Long waits for deliveries are avoided and machine downtime is kept to a minimum. The cost of a parts inventory is small when the overall savings are considered.

Machine Repair Record card**

FOREWORD

The 50000 series streamlined close-coupled puller machines covered by this catalog represent the latest design of the UNION SPECIAL flatbed line. Light weight needle bars and driving mechanisms and light weight presser bars make it possible to attain the utmost in speed and production. The new light weight parts and needle bearings make them lighter running and smoother operating. The light weight presser bar mechanism reduces pressure required to lift the foot. The clutch mechanism for the close-coupled puller is housed in the upper roller, to insure a uniformly controlled feeding. All parts are made by precision methods insuring complete interchangeability.

Automatic lubrication and a new filter type oil return pump, used in conjunction with isolated mounting oil pan base plate, for returning filtered oil to the main reservoir has made maintenance simple.

It is our constant aim to furnish carefully prepared information which will enable our customers to secure all possible advantages from the use of UNION SPECIAL machines. The following pages illustrate and describe the parts used in all of the machines covered in this catalog.

Union Special representatives will be found in all manufacturing centers, ready to cooperate with you to plan and estimate requirements.

IDENTIFICATION OF MACHINES

Each UNION SPECIAL machine carries a Style number which is stamped in the name plate on the machine. Style numbers are classified as standard and special. Standard Style numbers have one or more letters suffixed, but never contain the letter "Z". Example: "Style 51800 BA". Special Style numbers contain the letter "Z". When only minor changes are made in a standard machine, a "Z" is suffixed to the standard Style number. Example: "Style 51800 BAZ".

The distance between the rows of stitches or between needles is represented by a gauge number measured in 1/64ths of an inch, going from left to right. Thus, 16-64-16 gauge represents a distance of 16/64 or 1/4 inch between 1st (extreme left) and 2nd needles, a distance of 64/64 or 1 inch between 2nd and 3rd needles, and finally, a distance of 16/64 or 1/4 inch between 3rd and 4th needles. This would also indicate a four needle machine.

APPLICATION OF CATALOG

This catalog applies specifically to the standard Style of machines as listed herein. It can also be applied with discretion to some Special machines in Classes 51400, 51700, 51800. References to direction such as right, left, front, back, etc., are taken from the operator's position while seated at the machine. Operating direction of handwheel is toward the operator.

STYLE OF MACHINE IN CLASS 51400

Streamlined Flat Bed, Two Needle, Left Needle in Front, Independent Row, Low Throw, Close-Coupled Puller With Clutch in Upper Feed Roller, Double Disc Take-up, Light Weight Presser Bar and Needle Bar Driving Mechanism, Single Reservoir Enclosed Automatic Lubricating System, Filter Type Oil Return Pump and Oil Siphon Assembly, Lateral Looper Travel, Maximum Work Space to Right of Needle Bar 7 3/4 Inches.

51400 BE For hemming and simultaneously inserting elastic in tops and legs of knitted undergarments and for similar operations on light to medium weight materials. Seam specification 401-EFg-2. Type 106 GS needle. Standard gauges Nos. 16, 18, 24.

STYLE OF MACHINE IN CLASS 51700

Streamlined Flat Bed, Two Needle, Needles Abreast, Independent Row, High Throw, Close-Coupled Puller With Clutch in Upper Feed Roller and Tiltable Lower Feed Roller, Single Disc Take-up, Light Weight Presser Bar and Needle Bar Driving Mechanism, Single Reservoir Enclosed Automatic Lubricating System, Filter Type Oil Return Pump and Oil Siphon Assembly, Lateral Looper Travel, Maximum Work Space to Right of Needle Bar 7 3/4 Inches.

51700 BU For attaching waistband strips to dungarees, service pants, work trousers and for similar operations on medium heavy to heavy weight material. Strips guided next to feed dog. Seam specification 401-LSk-2. Type 128 GAS needle. Standard gauge No. 96 only.

STYLES OF MACHINES IN CLASS 51800

Streamlined Flat Bed, Four Needles, Left Needle in Front for Each Pair of Needles, Independent Row, High Throw, Close-Coupled Puller With Clutch in Upper Feed Roller, Single Disc Take-up, Light Weight Presser Bar and Needle Bar Driving Mechanism, Single Reservoir Enclosed Automatic Lubricating System, Filter Type Oil Return Pump and Oil Siphon Assembly, Lateral Looper Travel, Maximum Work Space to Right of Needle Bar 7 3/4 Inches.

STYLES OF MACHINES IN CLASS 51800 (Continued)

51800 BA For attaching bibs to overalls and for similar operations on medium heavy to heavy weight sanforized and non-sanforized materials. Strips used in long lengths guided next to feed dog. Floor treadle controlled strip collapsing mechanism. Knee press for raising presser foot. Seam specification 401-LS1-4. Type 130 GS needle. Standard gauges Nos. 12-56-12, 12-64-12, 16-64-16, 16-76-16.

51800 BB Same as 51800 BA, except it is not equipped with strip collapsing mechanism and has a floor treadle for raising the presser foot.

NEEDLES

Each UNION SPECIAL needle has both a type number and size number. The type number denotes the kind of shank, point, length, groove, finish and other details. The size number, stamped on the needle shank, denotes the largest diameter of blade, measured in thousandths of an inch, midway between the shank and the eye. Collectively, the type number and the size number is the complete symbol.

To have orders promptly and accurately filled, forward the empty package, a sample needle, or the type and size number should be given. See description on packages. A complete order would read as follows: "1000 Needles, Type 106 GHS-080/032".

The type numbers of the needles recommended for each style of machine covered by this catalog are given in the machine style description. Other needles are available, but the ones indicated are those recommended to produce the most satisfactory results. The type numbers of the recommended needles, together with their descriptions, and the sizes available are listed below:

<u>Type No.</u>	<u>Description and Sizes</u>
106 GHS	Round shank, round point, extra short, double groove, struck groove, ball eye, ball point, chromium plated - sizes 070/027, 075/029, 080/032, 090/036.
128 GAS	Round shank, round point, short, double groove, struck groove, ball eye, spotted, chromium plated - sizes 080/032, 090/036, 100/040, 110/044, 125/049, 140/054, 150/060, 170/067.
130 GS	Round shank, round point, short, double groove, struck groove, ball eye, spotted, government, chromium plated - sizes 080/032, 090/036, 100/040, 110/044, 125/049, 140/054, 150/060.

Selection of the proper needle size should be determined by the size of thread used. Thread should pass freely through needle eye in order to produce a good stitch formation.

ORDERING REPAIR PARTS

ILLUSTRATIONS

This catalog has been arranged to simplify ordering repair parts. Exploded views of various sections of the mechanism are shown so that the parts may be seen in their actual position in the machine. On the page opposite the illustration will be found a listing of the parts with their parts numbers, descriptions and the number of pieces required in the particular view being shown.

ORDERING REPAIR PARTS (Continued)

Numbers in the first column are reference numbers only, and merely indicate the position of that part in the illustration. Reference numbers should never be used in ordering parts. Always use the part number listed in the second column.

Component parts of sub-assemblies which can be furnished for repairs are indicated by indenting their descriptions under the description of the main sub-assembly. Example:

49	29105 AA	Looper Drive Lever Eccentric Assembly -----	1
50	22559 A	Bearing Cap Screw, lower-----	2
51	22559 B	Bearing Cap Screw, upper-----	2
52	22894 C	Eccentric Set Screw -----	4
53	22894 D	Eccentric Spot Screw -----	1

It will be noted in the above example that the eccentric, ball stud and bearing are not listed. The reason is that replacement of these parts individually is not recommended, so the complete sub-assembly should be ordered.

In those cases where a part is common to all of the machines covered by this catalog, no specific usage will be mentioned in the description. However, when the parts for the various machines are not the same, the specific usage will be mentioned in the description and, if necessary, the difference will be shown in the illustration.

At the back of the book will be found a numerical index of all the parts shown in this book. This will facilitate locating the illustration and description when only the part number is known.

IDENTIFYING PARTS

Where the construction permits, each part is stamped with its part number. On some of the smaller parts, and on those where construction does not permit, an identification letter is stamped in to distinguish the part from similar ones.

Part numbers represent the same part, regardless of catalog in which they appear.

IMPORTANT! ON ALL ORDERS, PLEASE INCLUDE PART NAME AND STYLE OF MACHINE FOR WHICH PART IS ORDERED.

USE GENUINE NEEDLES AND REPAIR PARTS

Success in the operation of these machines can be secured only with genuine UNION SPECIAL Needles and Repair Parts as furnished by the Union Special Corporation, its subsidiaries and authorized distributors. They are designed according to the most approved scientific principles, and are made with utmost precision. Maximum efficiency and durability are assured.

Genuine needles are packaged with labels marked *Union Special*. Genuine repair parts are stamped with the Union Special trademark, U S Emblem. Each trademark is your guarantee of the highest quality in materials and workmanship.

TERMS

Prices are net cash and subject to change without notice. All shipments are forwarded f. o. b. shipping point. Parcel Post shipments are insured unless otherwise directed. A charge is made to cover postage and insurance.

OILING AND THREADING

The oil has been drained from the machine before shipping and the reservoir must be filled before beginning to operate. Use a straight mineral oil with a Saybolt viscosity of 90 to 125 seconds at 100° Fahrenheit.

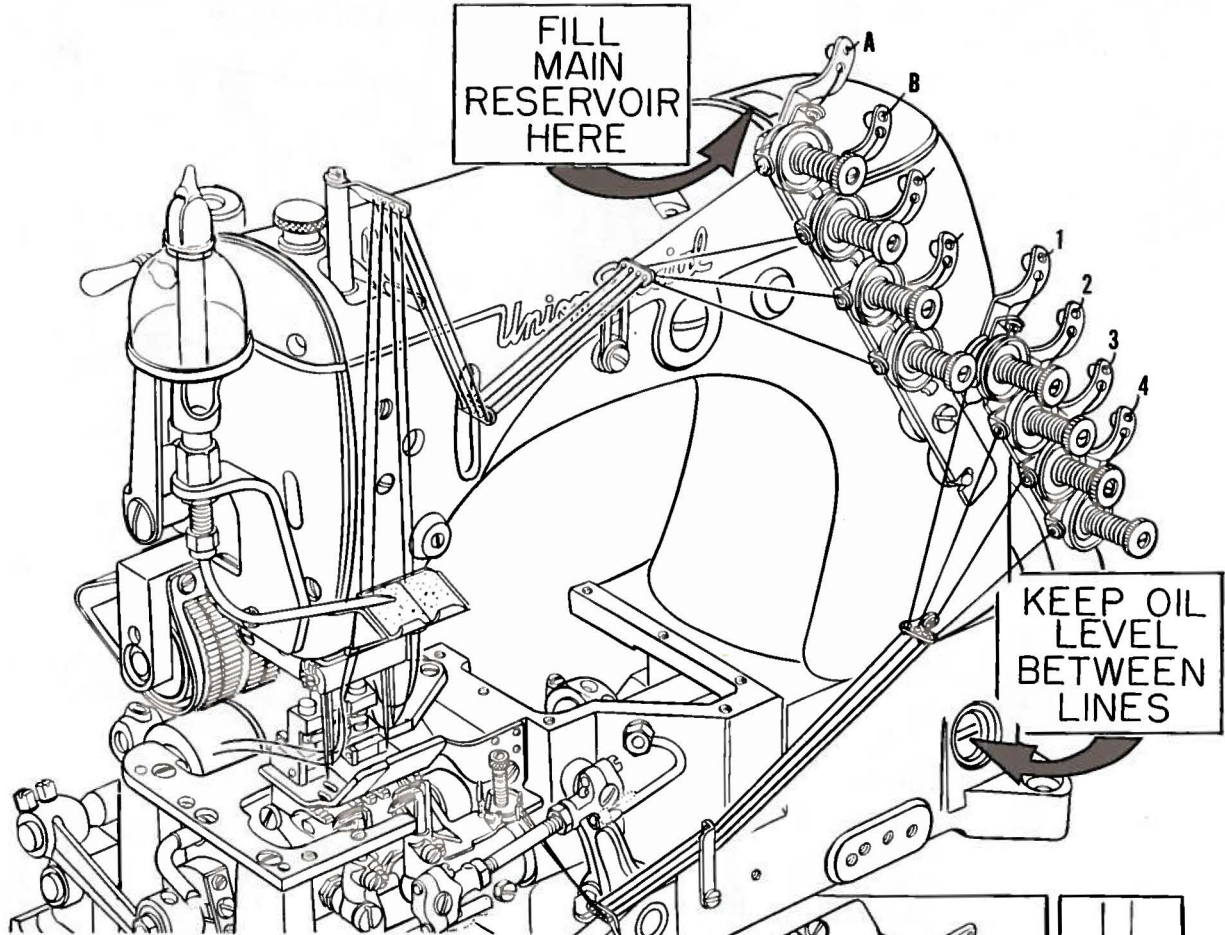

Oil is filled at the spring cap in the top cover and the level is checked at the sight gauge on the front of the machine. The oil level should be maintained between the red lines on the gauge. The capacity of the reservoir is 12 ounces.

The machine is automatically lubricated and no oiling other than keeping the main reservoir filled is necessary.

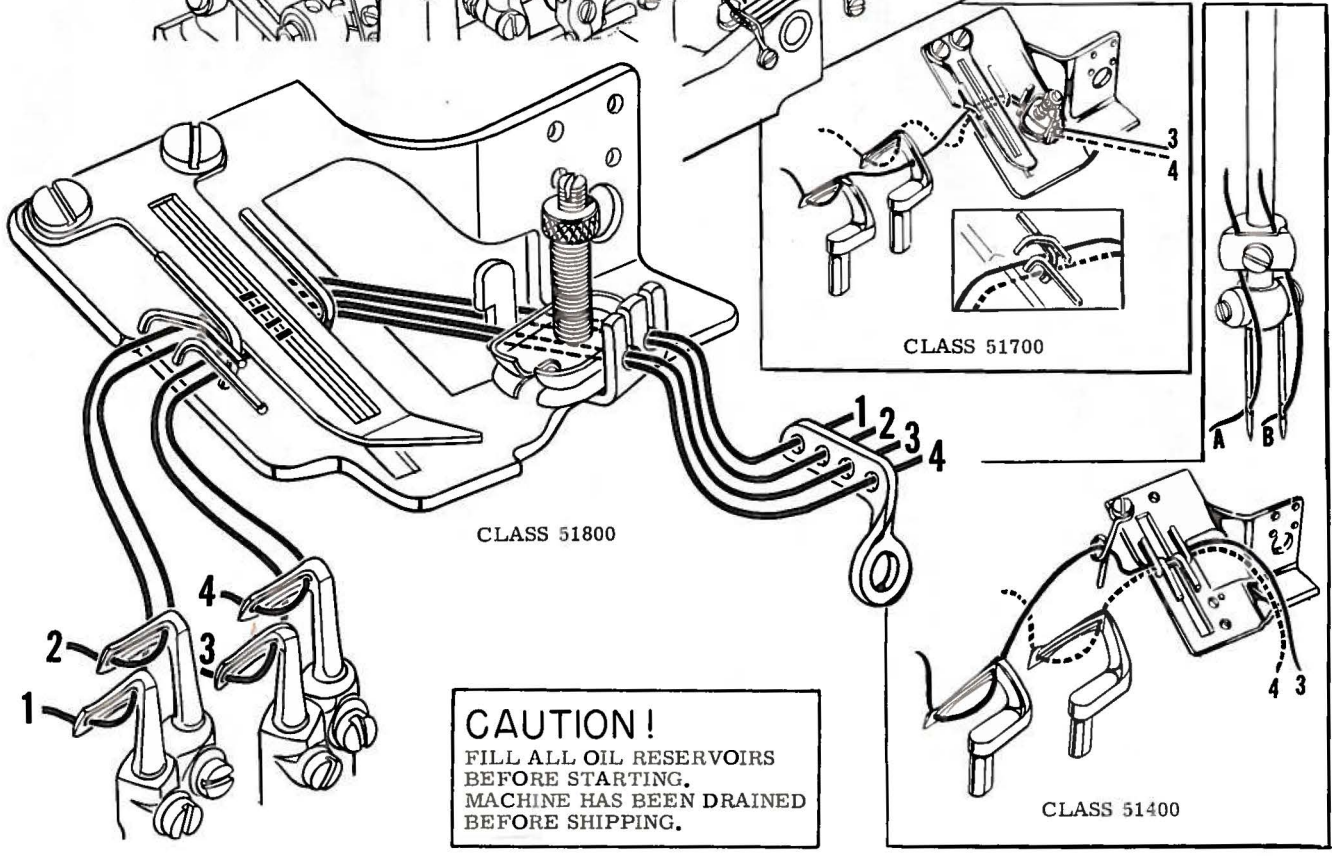

A daily check before the morning start should be made and oil added if required. Oil which has gone through the machine is filtered and pumped back into the main reservoir making too frequent oilings unnecessary. Excessive oil in the main reservoir may be drained at the plug screw in the main frame directly under the handwheel.

The accompanying drawing also shows the manner in which a four needle machine is threaded. Two needle machines are threaded in substantially the same manner. The looper threading of the various classes is indicated in the inserts.

Here are Oil Specifications for Union Special Sewing Machines

Specification 174 specifies a high quality petroleum oil, viscosity 100 seconds at 100°F. Recommended for all oiling applications on high speed machines.

Specification 175 specifies a high quality petroleum oil, viscosity 100 seconds at 100°F., water white or with a maximum A.S.T.M. color number of 1. *For use where freedom from oil staining is paramount.*

Specification 87 specifies a high quality petroleum oil, viscosity 300 seconds at 100°F.

Specification 100 specifies a general purpose high quality grease for use in ball bearings and transmitters. It is similar to commercial N.L.G.I., grease No. 3. Where No. 3 grease is not obtainable, No. 2 may be used.
