# INDUSTRIAL SEWING MACHINES

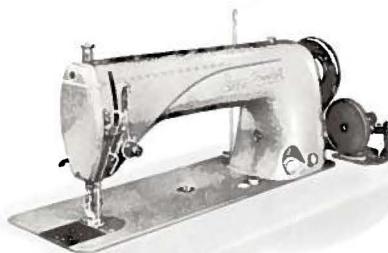

*... for Every Purpose!*

Job requirements vary — that's why Union Special builds a wide variety of specially designed sewing machines. It is also the reason why Union Special field representatives make a careful study of requirements before giving you detailed recommendations on the kind of equipment to install. Plants equipped with modern, high speed Union Specials have an important advantage. Union Special machines are built to do the job faster . . . better . . . cheaper, and they stay on the job with minimum time out for repairs. You're ahead when you use Union Special.

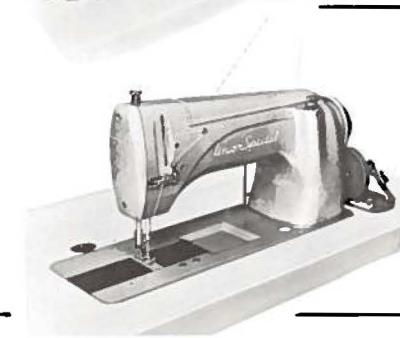

## 50000 SERIES MACHINES

The thousands of manufacturers using Union Special's new 50000 SERIES machines are finding these ultra-modern, streamlined models to be invaluable aids in cutting costs of operations and boosting production of a wide variety of products. Each of the many machines in the improved 50000 SERIES is specially designed to do a specific job efficiently, quickly, and economically!

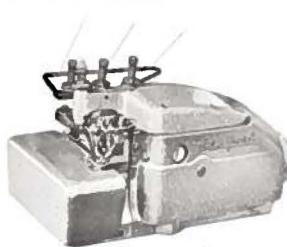

## THE 61400 LOCKSTITCH

Never before has a general purpose Lockstitch machine been so thoroughly engineered for handling modern industrial sewing requirements! And never has a machine offered more than the new Union Special SIXTY-ONE-FOUR — a superior machine for light or heavy weight work . . . for short runs as well as long . . . for tacking and back stitching . . . for curved seams and straight runs.

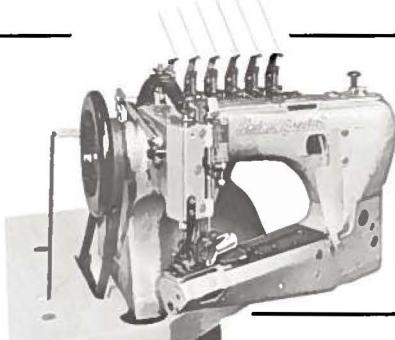

## NEEDLE FEED LOCKSTITCH MACHINES

Latest improvements in engineering, manufacturing methods, and materials have been combined in Union Special Class 61800 and Class 62200 needle feed Lockstitch machines providing operators with smooth, streamlined, light-running machines that reduce fatigue and strain. It's no wonder that manufacturers in plants throughout the country are praising the superior performance of these ultra-modern machines!

## THE NEW CLASS 39500 OVEREDGER

This new development antiquates every machine presently on the market for use where a curved needle machine is recommended. From its handsome, dynamically functional, modern design to its innermost mechanism, the THIRTY-NINE-FIVE has been produced to accelerate quicker . . . run faster . . . operate more smoothly and quietly . . . with less maintenance . . . and yield a greater profit than any other like equipment available to users today.

## 35700-35800 FEED-OFF-THE-ARM MACHINES

Union Special's popular feed-off-the-arm felling machines are light running, smooth operating machines that offer great advantages: sewing head of the latest type, new presser bar which practically eliminates feed marking, and presser foot which will lift at the lightest touch. Faster felling is certain with Union Special Class 35700-35800 feed-off-the-arm machines.

## IDENTIFICATION OF MACHINES

Each Union Special machine is identified by a Style number which is stamped into the name plate on the machine.

Machines similar in construction are grouped by a class number, which contains no letters. Example: "61900". Letters suffixed to a class number indicates the standard Style of a machine. Example: "61900 N". The letter "Z" is reserved as a suffix to the standard Style identification to specify machine is of "Special" construction. Example: "61900 NZ".

## APPLICATION OF CATALOG

This catalog applies specifically to the standard styles of machines as listed herein. It can also be applied with discretion to some Special styles of machines in Class 61900. References to direction, such as right, left, front, back, etc., are taken from the operator's position while seated at the machine. Operating direction of handwheel is toward the operator.

## STYLES OF MACHINES IN CLASS 61900

Streamlined Flat Bed Lockstitch Machine, Single Needle, Light Duty, Prepared for Pinking Attachment, Needle Feed and Drop Feed, Rotary Hook, Horizontal Hook Shaft, Push Button Stitch Regulator. One Reservoir Enclosed Automatic Lubricating System for Main Driving Mechanism, Separate Reservoir for Automatic Lubrication of Rotary Hook, Upper Left Head Mechanism Manually Lubricated, 1 9/64 Inch Needle Bar Travel.

61900 N For simultaneously seaming and pinking wash and wear fabrics and other light weight materials. Width of pink 5/16 inch and 3 rows of feed. Seam specification 301-SSa-1. Stitch range 9 to 18 per inch.

61900 P For simultaneously seaming and pinking wash and wear fabrics and other light weight materials. Width of pink 3/8 inch and 2 rows of feed. Seam specification 301-SSa-1. Stitch range 9 to 18 per inch.

## NEEDLES

Each Union Special needle has both a type number and a size number. The type number denotes the kind of shank, point, length, groove, finish and other details. The size number, stamped on the needle shank, denotes the largest diameter of the blade measured in thousandths of an inch across the eye. Collectively, the type number and size number is the complete symbol.

To have orders promptly and accurately filled, forward the empty package, a sample needle, or the type and size number should be given. See description on packages. A complete order would read: "1000 Needles, Type 180 GXS, Size 036".

Standard needle for machine Style 61900 N or 61900 P is Type 180 GXS. It has a round shank, round point, lockstitch, short length, ball eye, single groove, wide angle groove, struck groove, deep spot, ball point, and is chromium plated. Available in sizes 028, 032, 036, 040, 044, 048, 054, 060.

Selection of proper needle size should be determined by size of thread used. Thread should pass freely through needle eye in order to produce a good stitch formation.

For best results, use only genuine Union Special needles in the operation of these machines. They are packaged under our brand name, *Union Special*, which is backed by a reputation for producing highest quality needles for more than three-quarters of a century.

## IDENTIFYING PARTS

Where the construction permits, each part is stamped with its part number. On some smaller parts, and on those where construction does not permit, an identification letter is stamped in to distinguish the part from similar ones.

Each part number represents the same part regardless of catalog in which it appears.

IMPORTANT! ON ALL ORDERS, PLEASE INCLUDE PART NAME AND THE STYLE OF MACHINE FOR WHICH PART IS ORDERED.

## TERMS

Prices are strictly net cash and subject to change without notice. All shipments are forwarded at the buyer's risk f.o.b. shipping point. Parcel Post shipments are insured unless otherwise directed. A charge is made to cover the postage and insurance.

## LUBRICATION

Before starting to operate, be sure to remove the vent hole plug from the right side of the hook shaft gear case. This plug is used during shipment only, to prevent oil leakage through the vent hole. Then, lubricate machine thoroughly in accordance with instructions and run slowly for several minutes to distribute the oil to the various parts. Full speed operation can then be expected without damage.

## RECOMMENDED OILS

Use a straight mineral oil of a Saybolt viscosity of 200 to 250 seconds at 100° Fahrenheit in hook oil reservoir, feed driving shaft gear case, and hook shaft gear case. This is equivalent to Union Special oil specification No. 83.

Stainless water white straight mineral oil of the same viscosity as that described in the preceding paragraph, can be used in the hook oil reservoir. The stainless oil is Union Special specification No. 86.

Oils conforming to specification No. 83 or No. 86 may also be used in the manually oiled places.

Fill main reservoir through the oil cup (C) in the top of the machine. This oil level should be checked from time to time and kept between the lines on the gauge (D) in front of the machine.

With the needle bar at the top of its stroke, oil holes (A and B, Fig. 1) in the top of the machine twice daily.

The hook oil reservoir is drained when machine leaves factory and must be filled before starting to operate. It is filled at plug screw (E). Its level should be checked twice daily and kept between the lines of the gauge (F).

The hook shaft gear case is filled before shipment with a sufficient volume of oil to bring the level up to the plug screw hole (G, Fig. 2) in gear case cover when machine is tilted back against rest pin. Remove plug screw and check level of oil about every six months.

**CAUTION!** Do not use a compound oil in the hook oil reservoir, feeding drive shaft gear case, or hook shaft gear case, as these oils separate and froth.

Lubrication of the mechanism below the bed plate is automatically accomplished through the feed driving shaft which is tubular. Oil is introduced into the shaft at the gear end by means of an oil distributing plate (A, Fig. 3) which is secured to the large gear case cover (B) by means of two screws (C) and retaining block (D).

Should it ever become necessary to remove any of the parts from the gear case, it is imperative that the adjustment of the oil distributing plate be checked very carefully. This can be done by removing the large plug screw at right end of the gear housing and looking through the hole. The low point of the oil distributing plate must be even with or slightly below the center of the shaft (E) and just touching it. This is a very important adjustment, as the functioning of the automatic lubrication of the lower part of the machine depends upon it.

**NOTE:** All moving parts of the pinking attachment to be oiled once daily. Oil knife lever shaft front and rear, also oil two oil holes for lubricating both sides of lever bearings and knife holder shaft. Major oiling points are marked in red on attachment.

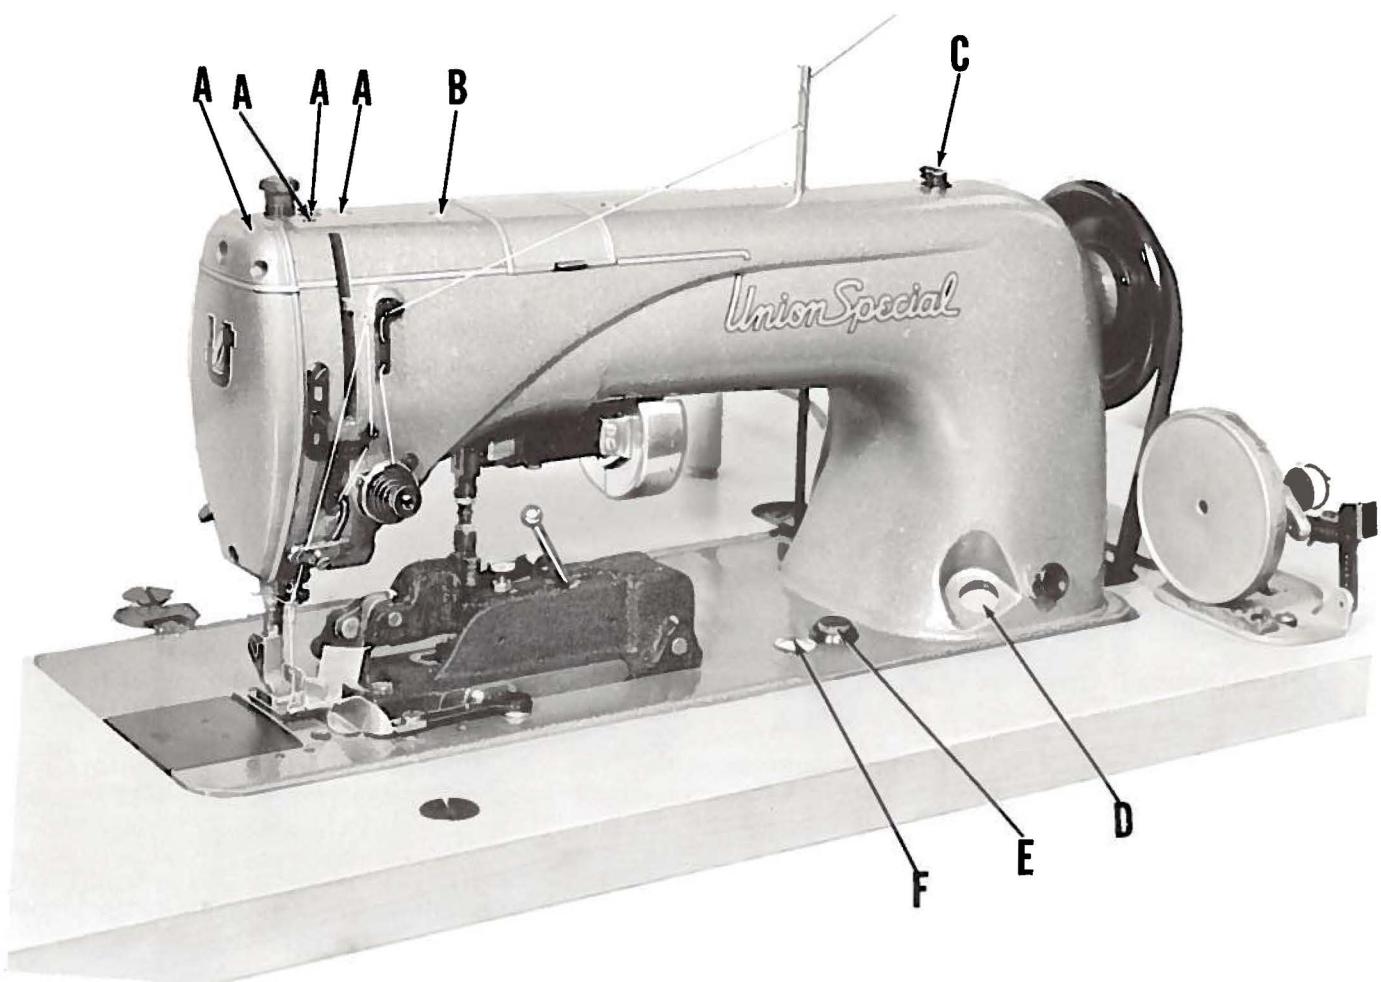

Fig. 1

NOTE: Manually oil pinker at oil holes which are painted red.

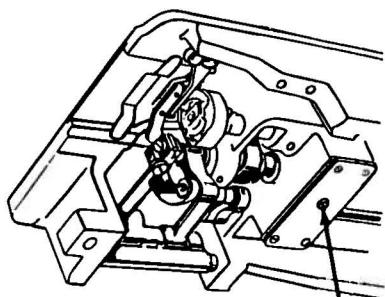

Fig. 2

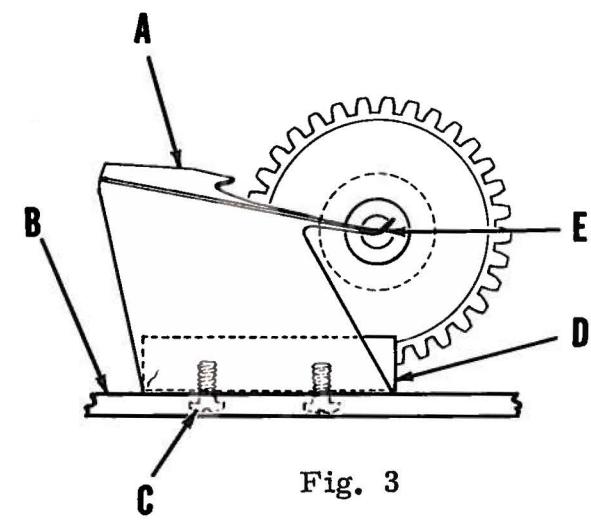

Fig. 3

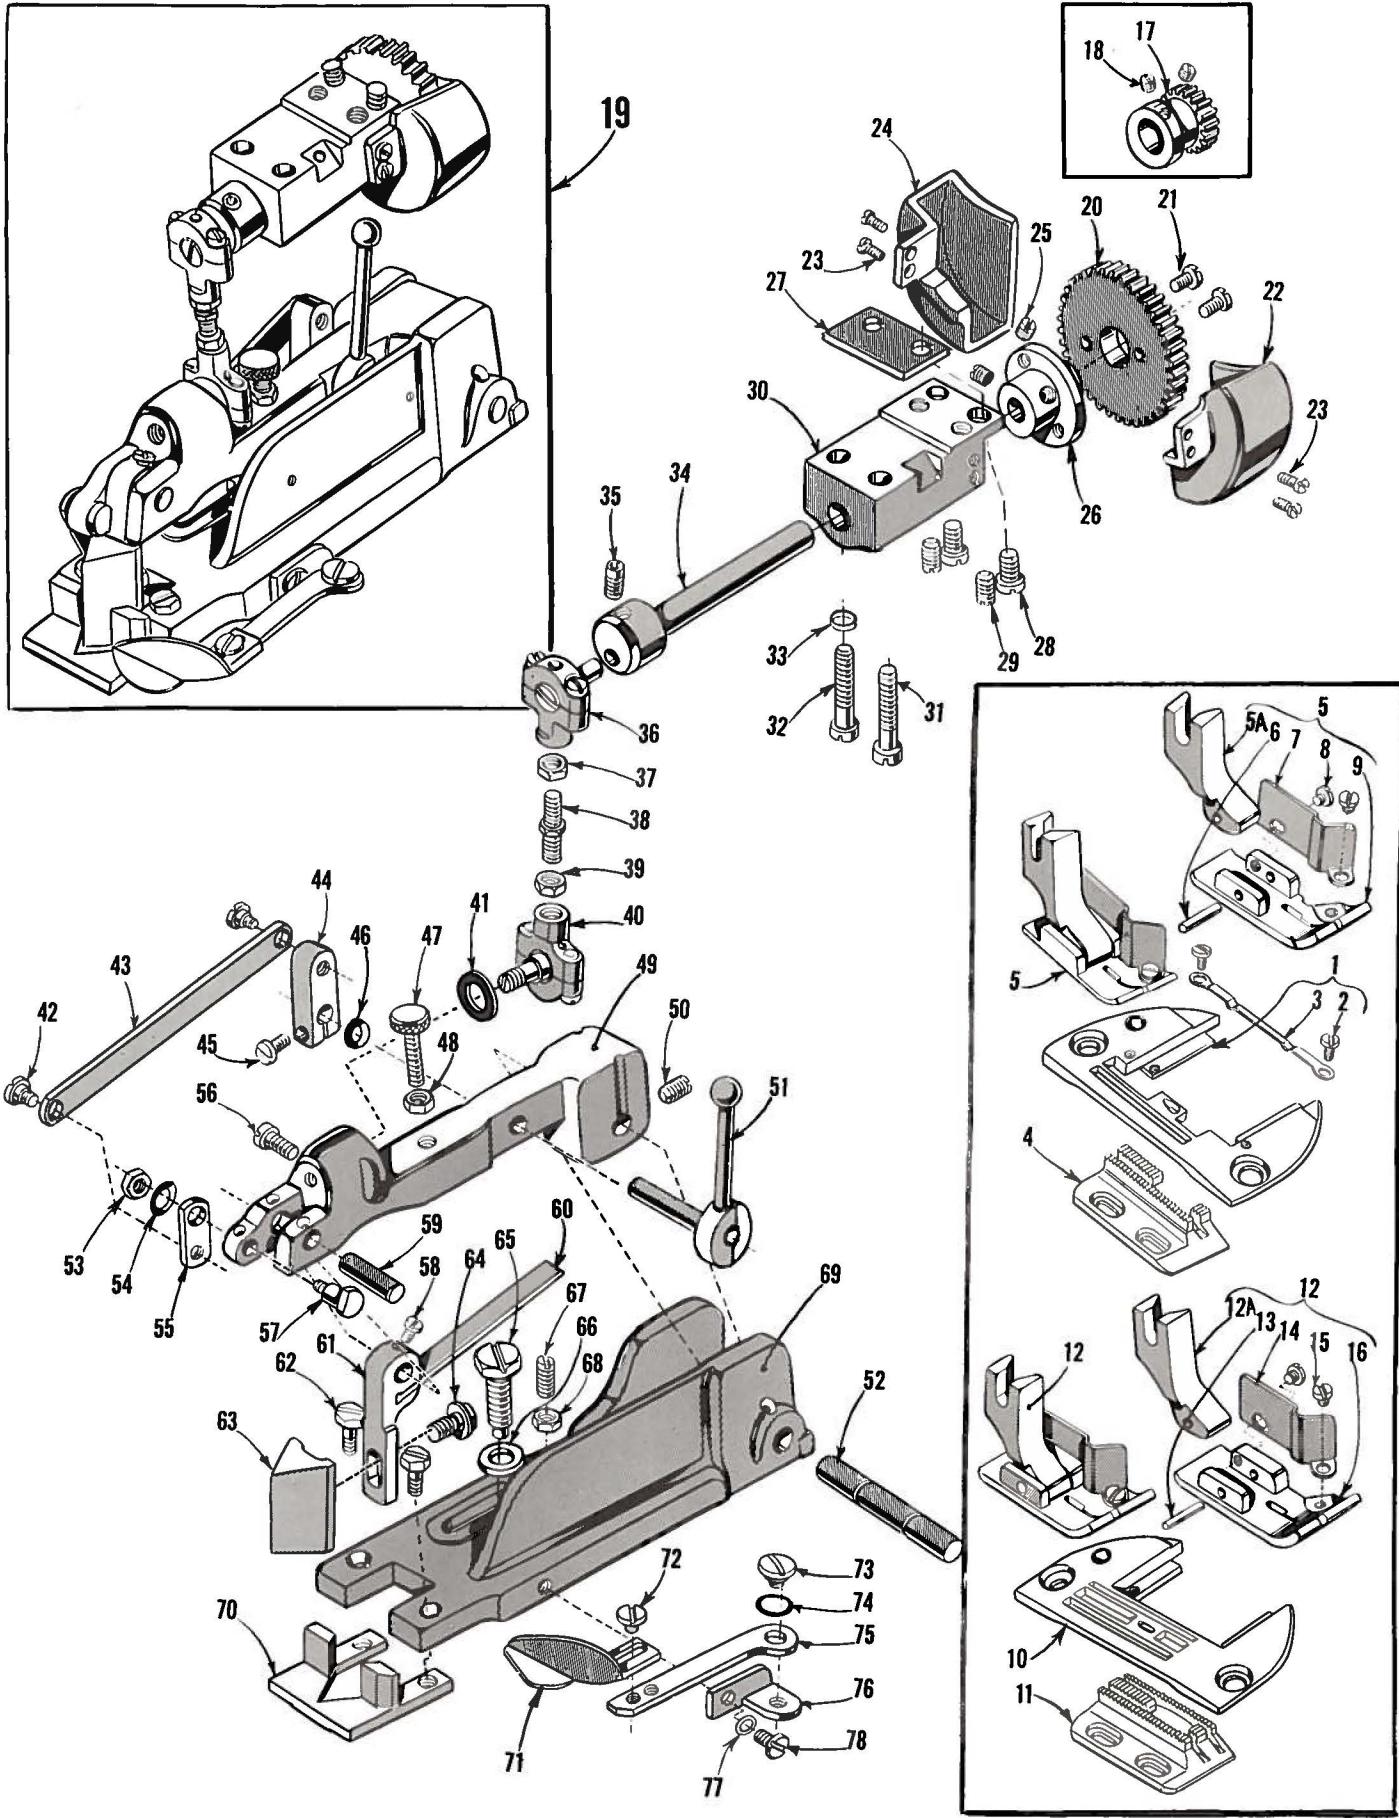

The following is a numerical list of the parts used in this machine. Quantities, part numbers, and descriptions are given. Following the parts list are photographs of some of the major parts.

Amt.	Part No.	Description	Amt.	Part No.	Description	Amt.	Part No.	Description
1	3-46	Base for 29482 (18-547)	1	59-6	Wrench, for 5/16" or 7/16" hexagonal head screw	2	666-173	Oil Wick for 29126 CZ, 61255 H, 61322 B
