Specifications	Solenoid-type	Solenoid-type Air-type Compressor Y/N		Air-type
Programming machine	Programming machine Y/N			

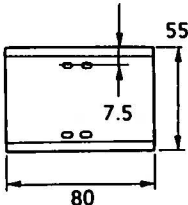

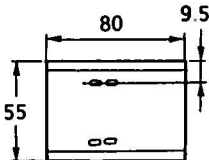

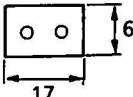

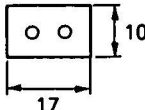

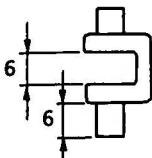

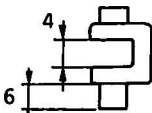

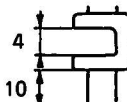

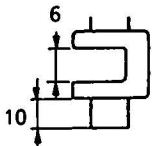

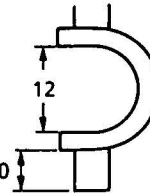

To perform label sewing, attach the inner clamp reverse device to the sewing machine. The inner clamp device is available as an option for each model as follows:

Reverse device (Option)

※ For BAS-310	S12651-001
For BAS-311	S12651-101
For BAS-320	S05650-001
For BAS-325	S09569-001
For BAS-326	S15522-001
For BAS-340	S19994-001

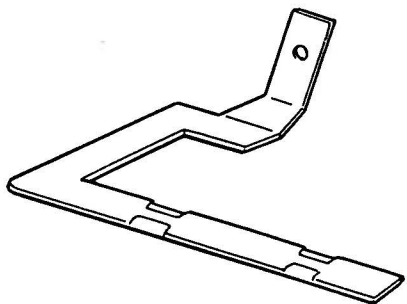

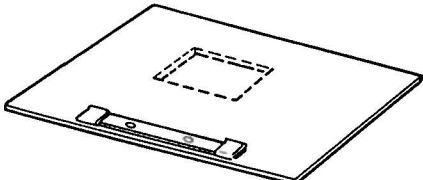

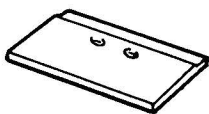

Presser Plate Blank, Presser Plate Holder and Work Clamp Crank (Option)

Presser plate blank	156492-000 		154256-001 		
Presser plate holder	S type 154291-001 		L type 154237-001 		※ Presser plate holder screws Screw: 2 pcs  117291-001
Presser crank	SS type S04516-001 	S type 154297-001 	L type 154234-001 	LA type S05665-001  Note 1	LL type S10541-001  Note 2

Notes

1. This is the standard crank for each inner clamp reverse device assembly.
2. This can be used for zigzag sewing using the presser foot.

Other optional parts

External presser foot	OT presser plate assembly	Inner clamp LL
S12644-001	157251-001 (t = 2 mm)	S10542-001
 ※ When sewing a label to a plain part, it is advisable to use this presser foot together with the OT presser plate for easier positioning.		 Note: This inner clamp is made to the smallest size. It is advisable to make an inner clamp from a plastic plate and paste it to the reverse surface of the inner clamp LL by means of tape or super glue, which is easier than using an iron plate.

Processing the feed plate

ネーム外形寸法と
Make it to the size of the outside dimension of the label.

Make the plastic plate so that the outside can fit
in the inside of the feed plate.

Collection of Sewing Examples

Square label sewing

- Be sure to start programming from the start position as shown in the left-hand figure.
- It is advisable to use the  key on the programmer device for easier operation.
- Make a back stitch within the crank range as shown in the left-hand figure.

Cycle time	10 sec
Productivity	About 2,000 pcs/day

Square label and sub-label sewing

- Process the OT presser plate so that the sub-label can fit there.

- Using the presser foot C prevents skipped stitches.

Presser foot C
152637-001

Cycle time	15 sec
Productivity	About 1,300 pcs/day

Vertical double label sewing

※ Floating label sewing

- After sewing the left side, cut the thread, feed the material and start sewing the right side.
- If there are too many bird's nests in the thread remainings on the reverse side of the material or if thread trimming is intended to be carried out later, the program (999L) that keeps the thread cutter inactive is available.
- To make a floating name sewing for knitted materials, keep pulling the material slightly while sewing.

Cycle time	12 sec
Productivity	About 1,680 pcs/day

Sewing procedure

[Machining the OT clamp plate]

1. Process the OT presser plate to the same dimensions as the outside of the emblem to be sewn.
※ Use a punch cutter or a thread saw.
2. Make an lower plate with the same dimensions as the feed plate.
※ Process the lower plate so that its dimensions are the same as those of the OT presser plate which is to be positioned above the lower plate.

[Programming]

1. Attach presser foot A before programming.
2. If the stitching is programmed so that presser foot A can pass smoothly through the hole of the processed OT presser plate, the seam margin will be about 2 mm.

[Sewing]

1. When using the presser foot F, set the intermittent stroke to "0".
2. If presser foot F is used, a slight pressing can be applied while sewing.

Two-stage positioning presser clamp

- If the emblem has already been pasted to the body, it is advisable to set the clamp in the two-stage positioning press for easier positioning and emblem sewing.
- This can be used for sewing large-sized materials for which the sewing position is hard to determine.

[Operation Method]

- 1) If the foot switch pedal is depressed to the first stage, the cylinder air will be released and the clamp will be lowered by the spring pressure.
 ※ The material is not yet pressed at this stage.
- 2) If the foot switch pedal is depressed to the second stage, air will enter the cylinder and both clamps will firmly press the material.
- 3) Then, if the foot switch pedal is depressed again, both clamps will be raised.

3. Snap and Hook Sewing

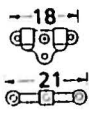

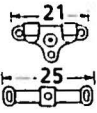

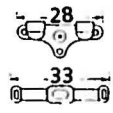

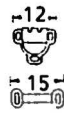

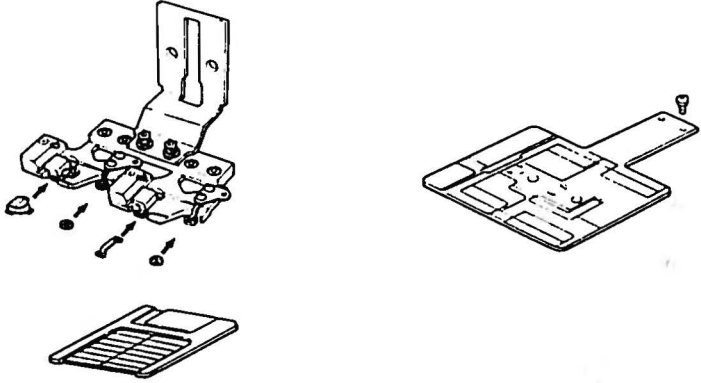

BAS-304·311

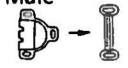

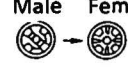

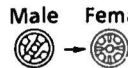

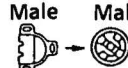

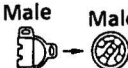

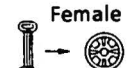

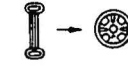

BAS-304 and 311

BAS-311-04 is a snap and hook type.

For standard specifications, a M-580K hook and an OMØ8.6 snap are used.

(Made by Oishi Kinzoku)

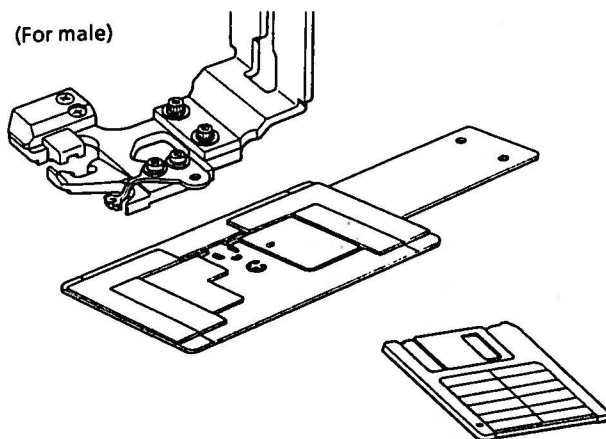

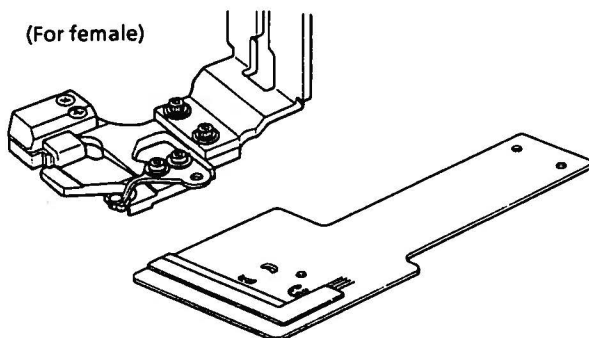

Parts name	Snap and hook unit				
	For M-508K	For M-520K	For M-525K	For M-533K	For M-528K
Parts code	S10477-001	S12572-001	S12573-001	S13110-001	S12571-001

Parts name	Parts code	Shape
Needle plate H	S13099-001	
Feed dog H	S13100-001	

Making the Clamp

1) When making the clamp, use the parts provided as cassette-type optional parts.

- Cassette plate U-A (t = 1)
S02968-001
- Cassette plate U-B (t = 2)
S02971-001

- 1 Cassette plate D-A
S02966-001
- 2 Butterfly program (right)
152632-001
- 3 Butterfly program (left)
152633-001

2) When using presser foot A for sewing, because the outside diameter of presser foot A is 4mm, process the width of the cassette plate groove to be 5mm.
NOTE: Use a punch cutter or a thread saw for processing.

3) If the material being sewn slips during sewing, sewing can be carried out more easily if sandpaper or thin rubber is stuck to the lower surface of the cassette plate U and the upper surface of the cassette plate D.

Programming Procedure

- 1) Set a stitch diagram such as the ones shown at left between the cassette plates U and D.

NOTE: Secure the stitch diagram with tape, etc., so that it does not move.

- 2) Use the feed key on the programmer machine to program so that the end of the needle follows the stitch line.

At this time, programming will be easier if the line key () is used along straight lines and the smoothing function is used along curved lines.

NOTE: For the BAS-325, the trace function can be used for programming.

- 3) After programming, attach the presser foot A, and give a test run to the sewing machine to make sure that presser foot A passes smoothly along the center of the cassette plate groove.

If any interference is found, adjust the cassette plate or the program to clear the interference.

Sewing

- 1) When sewing, press the cassette plate from the top with the standard work clamp.

- 2) When using the presser foot F, set the intermittent presser stroke at "0", and keep pressing the cassette plate during sewing.

5. Breast Pocket Trim Sewing

BAS-311·326·340

Before programming, make sure that the length, width and angle of the breast pocket have been finished to the specified dimensions.

If There Are No Dimension Differences

[Work Clamp]

- 1) Process the OT presser plate to match the length, width and angle of the breast pocket.
- 2) If the lower surface of the OT presser plate is positioned, sewing can be carried out easily.

(Example)

[Programming]

If there is no difference in the breast pocket dimensions (size) on sides A and B, both sides can be sewn in a single cycle.

To program this single cycle sequence, program a shunt feed (F) between points A and B.

If There Are Dimension Differences

[Work Clamp]

- 1) Process the work clamp plate to match the dimensions of the breast pocket.
- 2) If thin rubber or sand paper is stuck to the lower surface of the work clamp blank, then the material will be firmly clamped and sewing can be carried out easily.

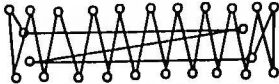

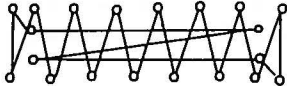

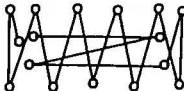

[Programming]

Use a split program. Enter a shunt feed (F) from the final stitch position in seam A to the initial stitch position in seam B, and then enter 666 ☐ at that start point.

[Sewing]

- 1) This program enables the presser foot to be lifted at B to reconfirm the position of the material. The sewing procedure is sew A, move to the shunting point at B, and stop the sewing machine. Raise the clamp to check the material position and then restart the machine. Seam B will be sewn, and after the machine returns to the shunting point at A, it will stop and the clamp will be raised.
- 2) When setting the material, adjust the DIP switch located on the circuit board or modify the air tube so that the clamp can be provided with two-stage positioning.
 - ※ Two-stage positioning unit
 - If the clamp foot switch (SW) is pressed to the first stage, air will be released from the clamp cylinder, and the clamp will be lowered by the spring force. Because the clamp does not press the material at this time (floating by 1 to 2 mm), the material can be moved freely and set in the specified position.
 - If the foot switch is pressed to the second stage, air enters the cylinder, and the clamp will press the material firmly. (Refer to p. 6)

			
Number of stitches: 42 Stitch size: 7 - 16 × 1 - 2	Number of stitches: 35 Stitch size: 7 - 20 × 1.5 - 3	Number of stitches: 28 Stitch size: 6.5 - 16 × 1 - 2	Number of stitches: 21 Stitch size: 3 - 7 × 1 - 2

- The bar tacking as shown above can be programmed and sewn freely.

Programming Procedure

Because the number of cross stitches is small, it is advisable to use the enlargement function to make programming easier.

1. Enlarge the stitching pattern by five or ten times the original size.
2. After the  key is pressed, "905" will be displayed in the STEP space for 5 times enlargement, and "910" will be displayed for 10 times enlargement.
3. Press the  key.
4. Use the jog key to set the program for each stitch.
5. After programming the final stitch, key in "111 .
6. Save the program on the floppy disk.
7. Although the stitch pattern was enlarged, the program will be written in the original size on the floppy disk.

Work clamp (Option)

• OT presser foot D assembly	S14846-001	2
• Presser foot SL	S14255-001	1
• Presser foot SR	S14254-001	1
• OT feed plate bracket assembly	S14841-001	1
• OT feed plate	S14252-001	1
• Screw	149168-001	2

One-touch Work Clamp (Option)

A one-touch work clamp (option) is provided to make conversion and positioning of the work clamp blank easier.

※ For BAS-311 S20279-001

※ For BAS-326 S20813-001

BAS-311 Max. sewing thickness is 5mm (sewing area at this time is 100 × 60mm).

BAS-326 Max. sewing thickness is 5.5mm (sewing area at this time is 150 × 100mm).

Note: If the sewing thickness is greater than the maximum, the range of use of the thread wiper will be limited.

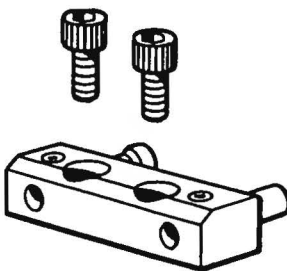

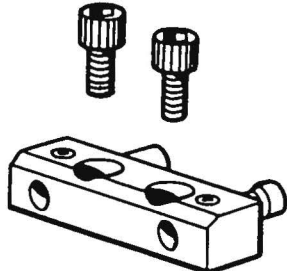

Items included as a set:

- * Presser foot holder L, R ... 1 each
- * Jig holder set L, R 2 each

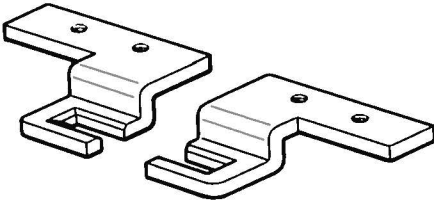

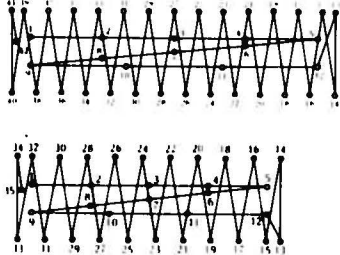

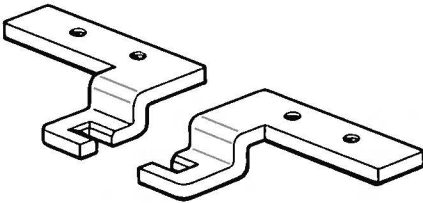

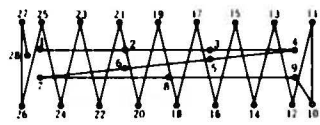

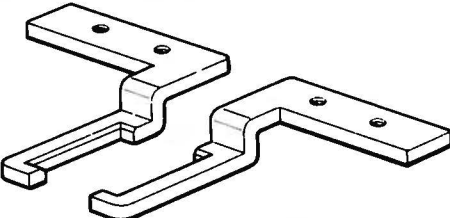

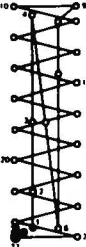

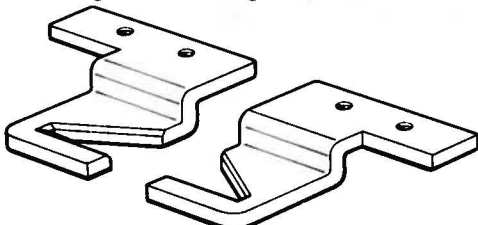

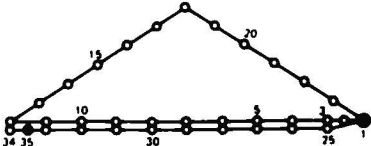

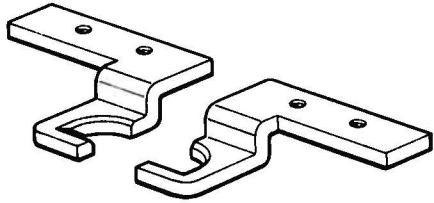

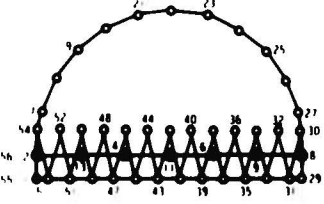

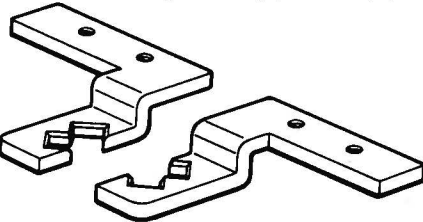

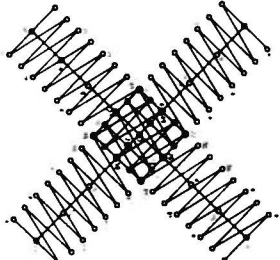

Screw holder set

< For both BAS-311 and BAS-326 >

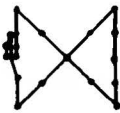

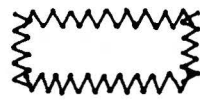

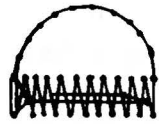

Parts name	Jig holder L set	Jig holder R set
Parts code	S20822-001	S20823-001
Shape		

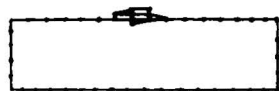

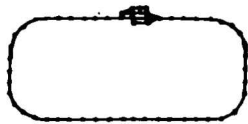

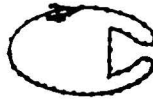

One-touch Work Clamp (Option)

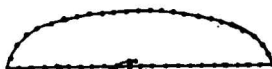

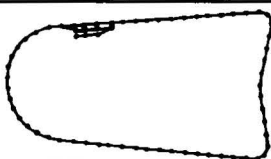

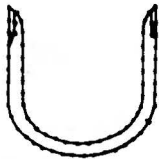

A work clamp for all types of bar tacking can be attached as the one-touch work clamp for the BAS-311.

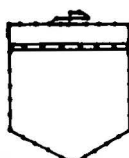

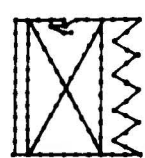

Work Clamp	Stitch pattern (reference)	Parts code
[For large bar tacking] (L) (R) 		(R) S23818-001 (L) S23819-001 Feed plate: S23820-001

If a three-hole button clamp and a special-purpose PROM are attached to the BAS-304 or BAS-311, they can be used as lock stitch button sewers.

Features

1. Stitching can be quickly changed, requiring no trouble to replace the feed cam.
2. Sewing of three-hole buttons and various button sewing as shown in the below figure can be achieved.
3. Up to ten sewing patterns can be stored in the memory.
4. If the button clamp is removed, the machines can be used as electronic sewing machines.

Sewing Patterns

Sewing Preparation

Attach the special-purpose PROM, and turn the DIP switch No. 5 located on the circuit board to ON. The button clamp and the needle will not touch each other because the machine origin point will come be at the front.

Before turning on the power, be sure to move the needle to the button position.

Replacement Parts

1. BU presser foot UL	S14849-001	1
2. BU presser foot UR	S14848-001	1
3. Presser foot D assembly	S14846-001	2
4. OT feed plate bracket assembly	S14841-001	1
5. OT feed plate	S14069-001	1
6. Button float spring	153871-001	1
7. Float spring presser plate	S14073-001	1
8. PROM for button sewing (304)	Special order	1
PROM for button sewing (311)	S15167-001	1
9. Screw	149168-001	2
10. Screw	062670-512	2
11. Washer	102707-002	2
12. Bolt 4.76	117363-001	2
13. Washer 4.76	025710-232	2
14. Button clamp	S03463-001	1

Programming Procedure

(Example 1)

(Example 2)

1. Press the **P** key. (The clamp will move to the machine origin point.)
2. Use the jog key to move the clamp to the sewing start position.
3. Program the first stitch by pressing the **L** key.
4. In the same way, program the second and third stitches by pressing the **L** key. Note, however, that movement should be made for two or more pulses.
5. After "999" is displayed in the third stitch position, press the **F** key, and move the needle to the fourth stitch by pressing the jog key.
6. Program by pressing the **L** key.
7. In the same way, program the movement from the fourth stitch to the fifth stitch, from the fifth stitch to the sixth stitch, and from the sixth stitch to the seventh stitch.
8. Program the eighth and ninth stitches by using the jog key and the **L** key.
9. After programming the ninth stitch, key in "111 **F**".
10. Then, the clamp will return to the sewing start position.
11. Press the READ/WRITE switch to store the program in the floppy disk.
12. Press the **P** key to clear the display of the programming machine.

Programming procedure

(Example)

1. Prepare a stitching pattern, and program for each stitch.
For the linear part, press the  key for easier programming.
2. The seam pitch for the linear part and the zigzag part covered by cross stitching should preferably be 3.0 to 4.0 mm.

Sewing Preparation

1. Use the presser foot A.

Presser foot A
152283-101

2. Turn the DIP switch No. 2 located on the circuit board to ON, and the clamp will operate in two stages for easier working.

Work Clamp

- Feed plate S13098-001
- Work Clamp L .. S13097-001
- Work Clamp R .. S13096-001

10. Seaming for Slacks Pocket Brims

BAS-326

When sewing seams for slacks pocket brims, using the BAS-326 and BAS-373 (width 180mm x length 100mm) can provide symmetric curved lines.

Programming procedure

Program curved lines easily by using the smoothing program.

If the split program is used, the left start and the right start will be made alternately, improving sewing efficiency.

Example of Using the Work Clamp

The BAS-311 can store up to 10 patterns for darts sewing, and a wide range of darts lengths from 75-100mm can also be used.

Programming procedure

1. Patterns A and B are programmed by specifying the seam pitch and then pressing the  key.
2. Pattern C is provided with a part with wide seam pitch (6 to 7 mm) for passing the wire hook.
3. For pattern D, the program can be set so that lap sewing at both ends for sewing the curtain height adjuster plastic plate is possible. This changes the machine speed to low speed during lap sewing and protects the needle from breakage.

Applicable sewing machine

- Use a air specifications type with strong pressing pressure because the materials to be sewed vary from thick materials to thin lace.
- A 100V compressor can also be provided.
- The BAS-311 is of horizontal head specifications.

Sewing Preparation

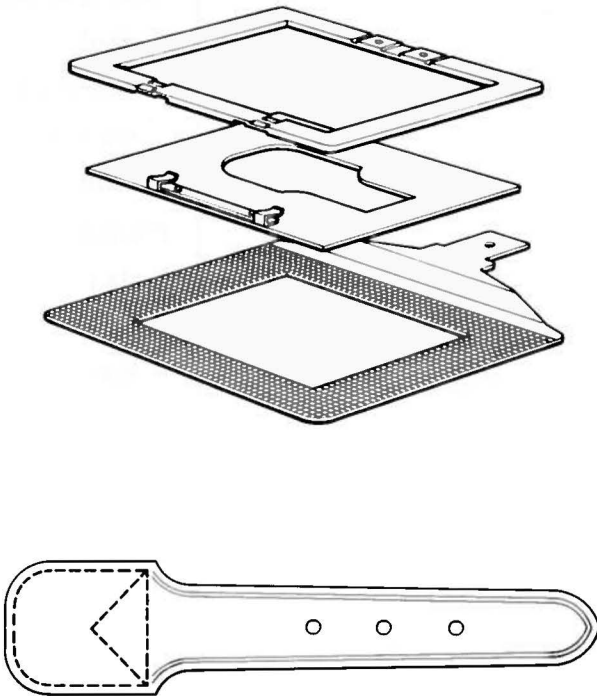

- Set the intermittent stroke at 7 mm.
- Use the presser foot A (152283-101).

Example of Using the Work Clamp

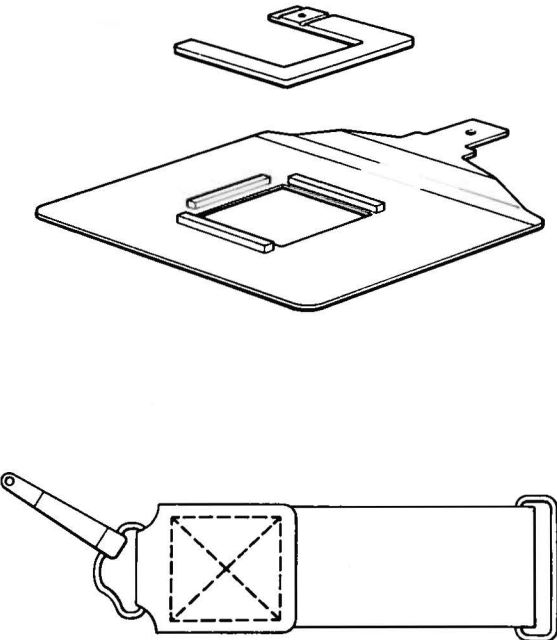

12. Bag Handle Sewing

BAS-326

Optional Parts

BAS-340

[Needle cooler assembly] S21110-009

※ When the needle cooler assembly is attached, set the DIP switch B-4 to ON as shown above.

Optional Parts

BAS-311-326

[Light transformer assembly] S18465-000

※ Connect the following parts to the other ends of the respective connectors.

	6V machine light	5V marking light
Connector pin	MOLEX Female pin 1381ATL (143548-000) 2	MOLEX Male pin 1380TL (143549-000) 4
Connectors	MOLEX 3191-02R1 (S18466-000) 1	MOLEX 1545P (S05008-000) 2

Optional Parts

BAS-326

[Data Converter assembly] S18051-001

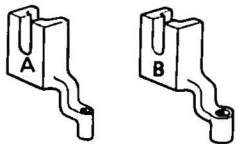

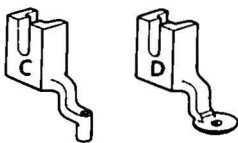

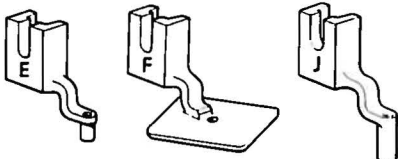

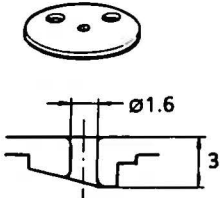

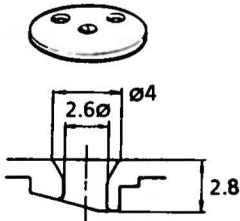

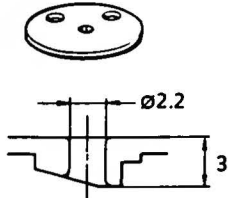

If this assembly is used, data in the BAS-320 and BAS-325 micro disk (2.5") and data in the BAS-326 floppy disk (3.5") can be interchanged.

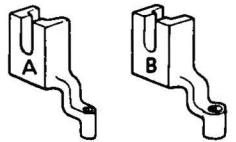

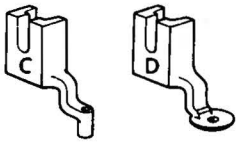

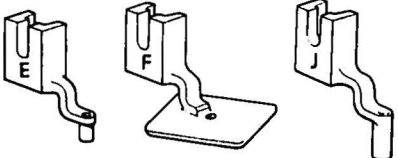

※ The BAS-320 has a different area size, so correct before making conversions.
