SHANGHAI HUIGONG NO.3 SEWING MACHINE FACTORY

From the library of: Superior Sewing Machine & Supply LLC

1.Preparation for operation

1) Safety precautions

- (1) When turning the power on, keep your hands and fingers away from the area around/under the needle and the area around the pulley.
- (2) Power must be turned off when the machine is not in use, or when the operator leaves the seat.
- (3) Power must be turned off when tilting the machine head, installing or removing the "V" belt, adjusting the machine, or when replacing.
- (4) Avoid placing fingers, hairs, bars etc. near the pulley, "V" belt, bobbin winder pulley, or motor when the machine is in operation.
- (5) Do not insert fingers into the thread take-up cover, under/around the needle, or pulley when the machine is in operation.
- (6) If a belt cover, finger guard, eye guard are installed, do not operate the machine without these safety devices.

2) Precautions before starting operation

- (1) Never operate the machine before filling the machine's oil pan.
- (2) When a new sewing machine is first turned on, verify the rotational direction of the pulley with the power on.
- (3) Verify the voltage and phase (single or three) with those given on the machine nameplate.

3) Precautions for operating conditions

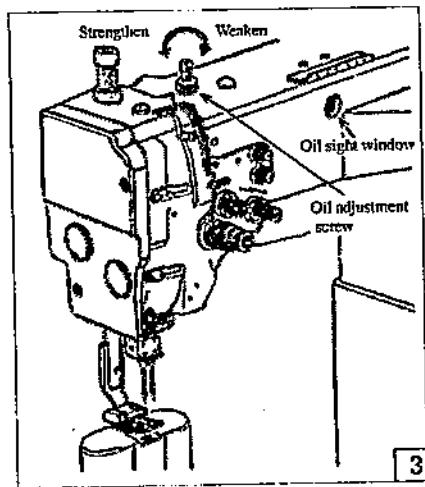

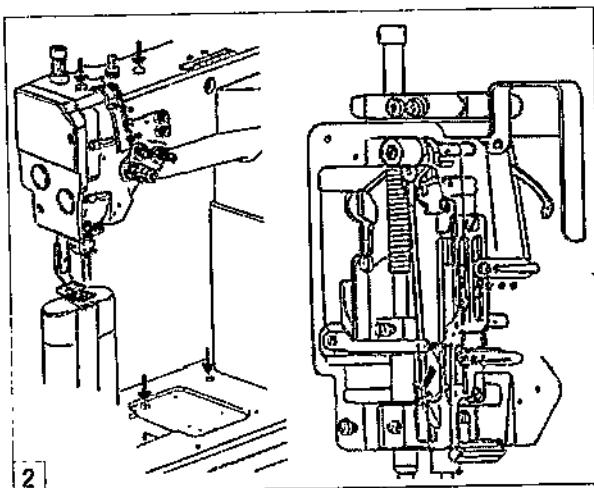

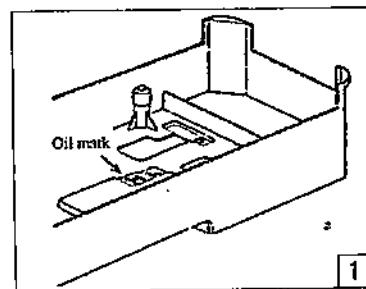

- (1) Avoid using the machine at abnormally high temperatures (35°C or higher) or low temperatures (5°C or lower).
- (2) Avoid using the machine in dusty conditions.

4) Specifications

Model	GC24518-1LD/1RD	GC24518-2D
Max. sewing speed	2000rpm	
Stitch length	0—5mm	
Needle bar stroke	33.4mm	
Presser foot stroke	By hand	7mm
	By knee	10mm
Hook	1.6times hook	
Needle	DP×5 (14#-18#)	
Needle gauge		8 mm
Lubrication	Semi-auto lubricated	
Motor	220V550W Servo motor	

2. Lubrication (Fig.1、Fig.2、Fig.3)

- 1) Before starting operation, be sure to pour oil up to the position H of oil tank. If the oil below position L, replenish the oil supply up to position H. (Fig.1)
- 2) When a new sewing machine is first operated, or when a sewing machine which left out of use for a long period of time is operated, it will be necessary to oil through the oilholes after removing the rubber plugs shown below(the direction shown in arrows). (Fig. 2)
- 3) While operating the machine, check the condition of oil lubrication through the oil check window. The oil amount can be adjusted by oil adjustment screw.(Fig. 3)

3. How to attach needle(Fig.4、Fig.5)

Note: Before attach needle, be sure to turn off the power.

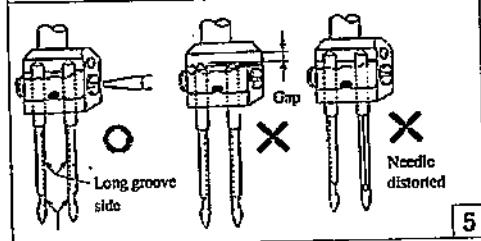

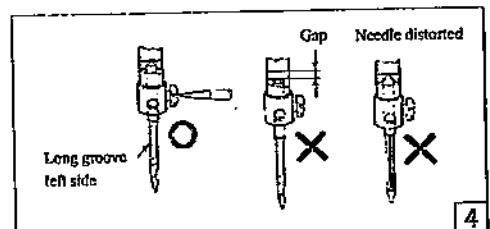

- 1) Turn the balance wheel by hand to raise the needle bar to its highest position.
- 2) Loosen the needle clamping screw.
- 3) GC24518-1LD/ GC24518-1RD (Fig.4)

Hold the needle to its side with the long groove side (left), then insert the needle as deeply as it will go into the needle clamping hole.

GC24518-2D (Fig.5)

Hold the needles so that the two needles side with the long grooved (faces each other), and insert it as deeply as it will go into the needle clamping holes.

- 4) Tighten the needle clamping screw.

4.How to wind the lower thread (Fig.6)

Strength of winding

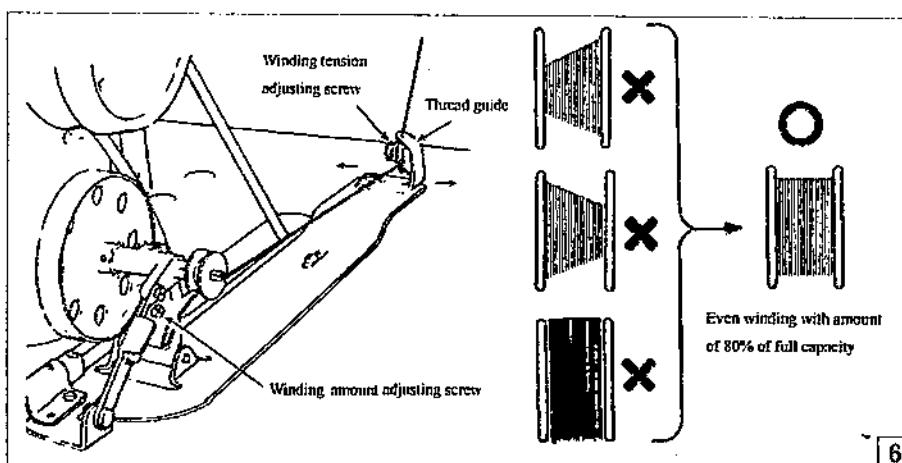

Particularly in the case of nylon or polyester thread, wind the bobbin loosely.

Uneven winding

If the bobbin is wound unevenly, slide the thread guide toward the less wound portion of bobbin.

Winding amount

When the bobbin is wound excessively, loosen the adjusting screw. When the bobbin is wound insufficiently, tighten the adjusting screw.

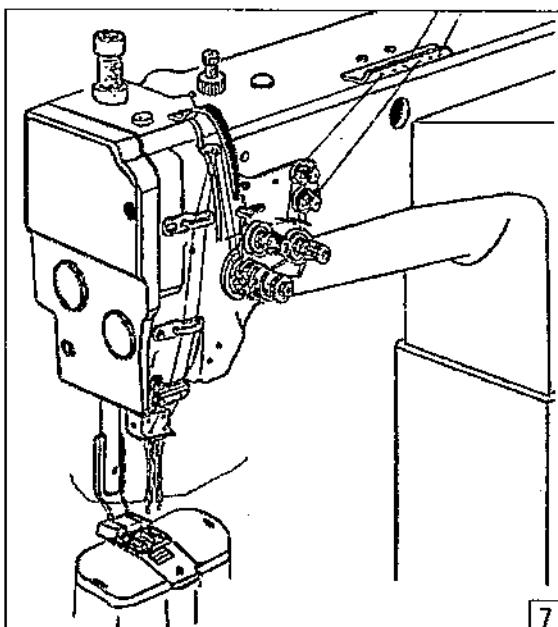

6

5.How to route the upper thread(Fig.7)

Raise the thread take-up lever to its highest position and lead the upper thread as shown in fig.7

6.Setting of bobbin (Fig.8)

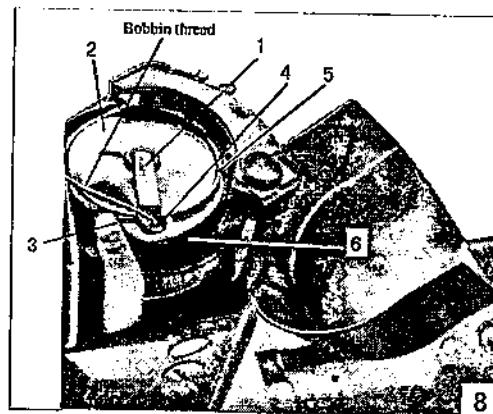

- 1) Raise flap 1 and remove the empty bobbin.
- 2) Insert bobbin 2 in such a way that when the thread is unwound from it moves in the opposite direction to the gripper.
- 3) Pass the thread through slit 5 and below spring 6, pass the thread through slit 3 and pull about 3 cm through.
- 4) Close flap 1 and pass the thread through the flap's guide 4.

7

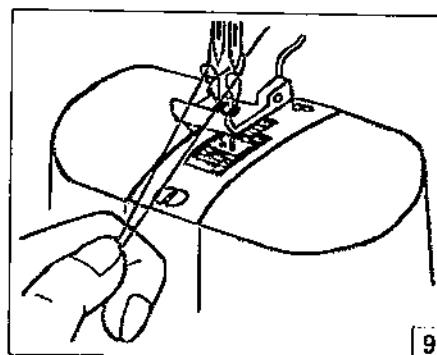

7.How to adjust the lower thread (Fig.9)

Pick up the end of needle thread by left hand and lightly press down the pedal by toe to run the machine one turn. When the needle thread is pulled up, the bobbin thread will be drawn out as shown in the right figure.

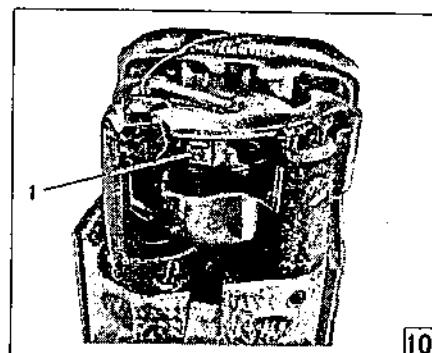

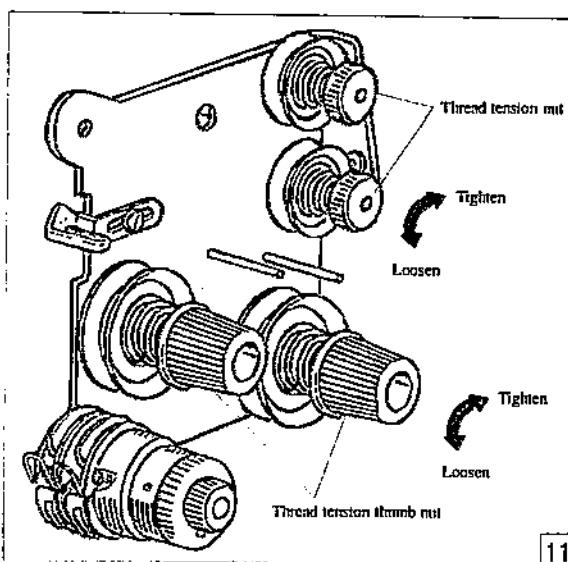

8.How to adjust the lower thread (Fig.10)

The lower-thread tension should be set in accordance with the type of seam required. Adjust the tension with screw 1.

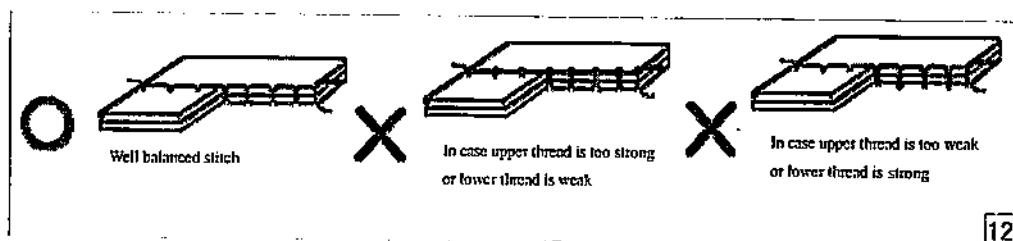

9.Adjustment of upper thread (Fig.11)

Turn the Thread Tension Nut left or right to loosen or tighten the pressure of upper thread.

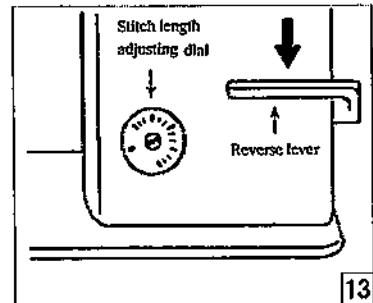

10_Adjusting of thread tension (Fig.12)

For ordinary stitching, the tension of the upper and the lower threads should be equal.

11. Adjustment of stitch length and reverse sewing (Fig.13)

- 1) Rotate the stitch length adjusting dial to change the stitch length.
- 2) Pressing the stitch length adjusting lever for reverse stitching.
- 3) Reverse feeding starts when Reverse Feed Lever is depressed, and the machine will feed forward again if Reverse Feed Lever is released.

13

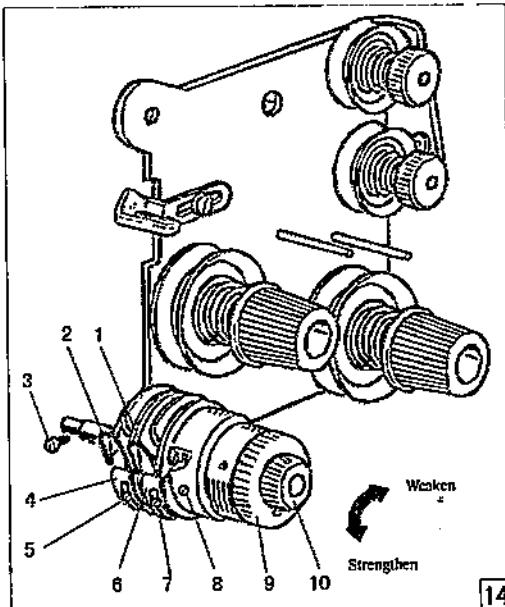

12. Adjusting thread take-up spring (Fig.14)

1) Adjusting the thread take-up spring stroke

- Thread take-up spring for left upper thread 2
Loosen the screw 5, adjusting the stopper block 4.
- Thread take-up spring for right upper thread 1
Loosen the screw 7, adjusting the stopper block 6.

2) Adjusting the thread take-up spring tension

- Thread take-up spring tension for left upper thread 2
Loosen the nut 10 and screw 3, then adjusting the tension screw. After adjustment, tighten the nut 10 and screw 3.
- Thread take-up spring tension for right upper thread 1
Loosen the screw 8, adjusting the nut 9. After adjustment, tighten screw 8.

14

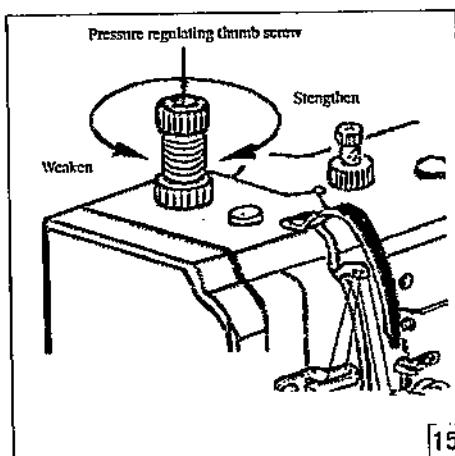

13. Adjustment of pressure of presser foot (Fig.15):

As shown in Fig.15, turn the pressure regulating thumb screw to increase or decrease the pressure of presser foot.

14. Adjust the thread guide

The position of the thread guide affects stitch tightness, and therefore must be adjusted according to sewing materials and sewing conditions.

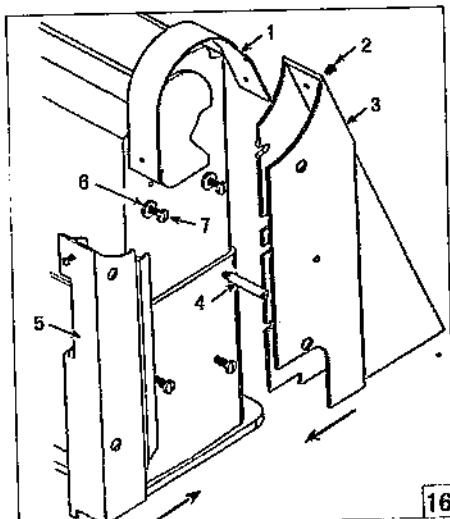

Thread guide position	Leftward	Center	Rightward
Material weight	Heavy	Medium	Light
Supply	More	Standard	Less

15

15. Installation of Belt cover (Fig. 16)

Set the screw 4, 6 and the washer 7 on the arm as illustrated. Assemble the belt guard 3 in the direction of the arrow, tighten it's screw. The assembling of the belt guard 5 is the same as the belt guard 3, then, insert the belt guard 1 from the top of the pulley into the inside of the 3 and 5, tighten the screw 2.

[16]

16. Driving knife adjustment(Fig. 17)

In resting position the rear edge of the driving knife should be flush with the front edge of the counter-knife.

The fixed knife should abut on the thread pulling knife along its total width.

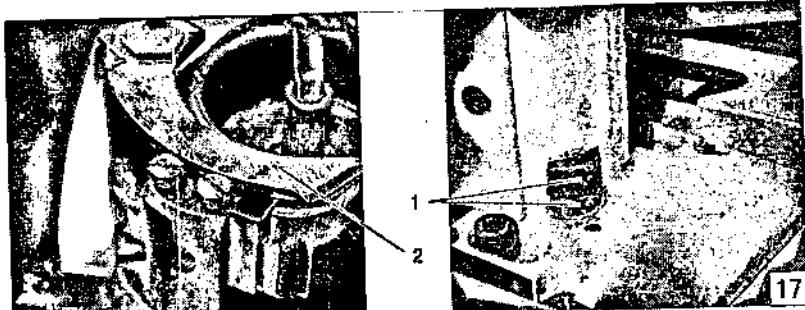

The pivoting driving knife should abut on the fixed knife after approx. 1/3 of its width.

The driving knife must not collide with the bobbin case.

The clearance between the lower blade edge of the driving knife a and the lower surface of the inner rotary hook b should be 0.3-0.4mm.

Checking:

Loosen two screws 1 for adjusting the resting position of the driving knife 2 and adjust the knife according to the standard, then tighten screws 1.

[17]

Attention:

Check the axial clearance of the knife shaft when tightening the screws 1. The driving knife must be easily movable and the axial clearance as low as possible.

17. Adjusting the fixed knife position and bobbin thread clamping(Fig. 18).

Checking:

The clamping spring 5 has the function to hold the cut bobbin thread in order to avoid skipped stitches at the seam beginning.

Fixed knife 4 and driving knife 6 must be in parallel position standing under a slight cutting pressure.

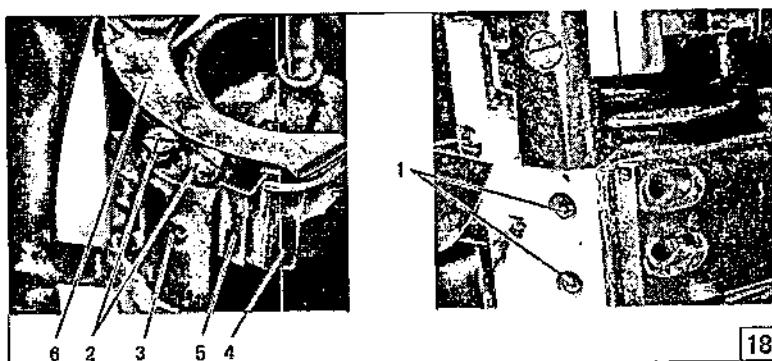

Parallel position correction

Loosen screw 3 slightly for adjusting the parallel position of thread pulling knife 6 and counter-knife 4, then change counter-knife 4 by setting the screws 2 in such a way that the edges of thread pulling knife and counter-knife are in parallel position. Tighten screw 3 at last.

Cutting pressure adjustment

The knives should guarantee a safe cut at the lowest possible pressure of the counter-knife against the thread pulling knife. This is normally the case when the edge of the counter-knife just touches the thread pulling knife with a knife overlapping of 1/3.

Loosen screws 1, then turn counter-knife support in such a way that the condition is fulfilled, at last, tighten screws 1.

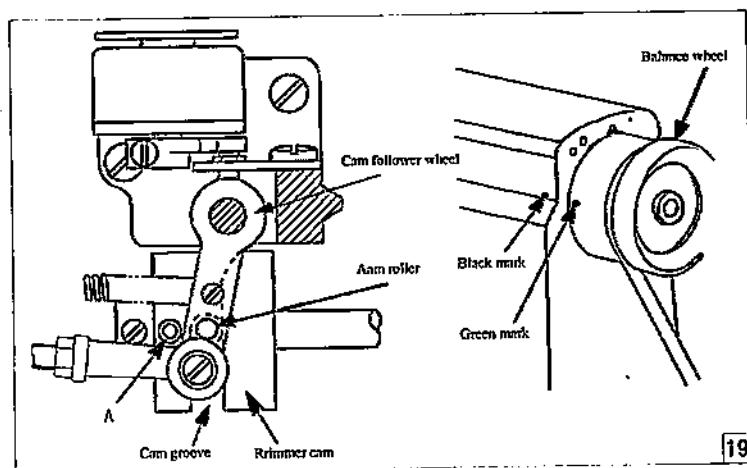

18

18. Adjustment of trimmer cam (Fig.19)

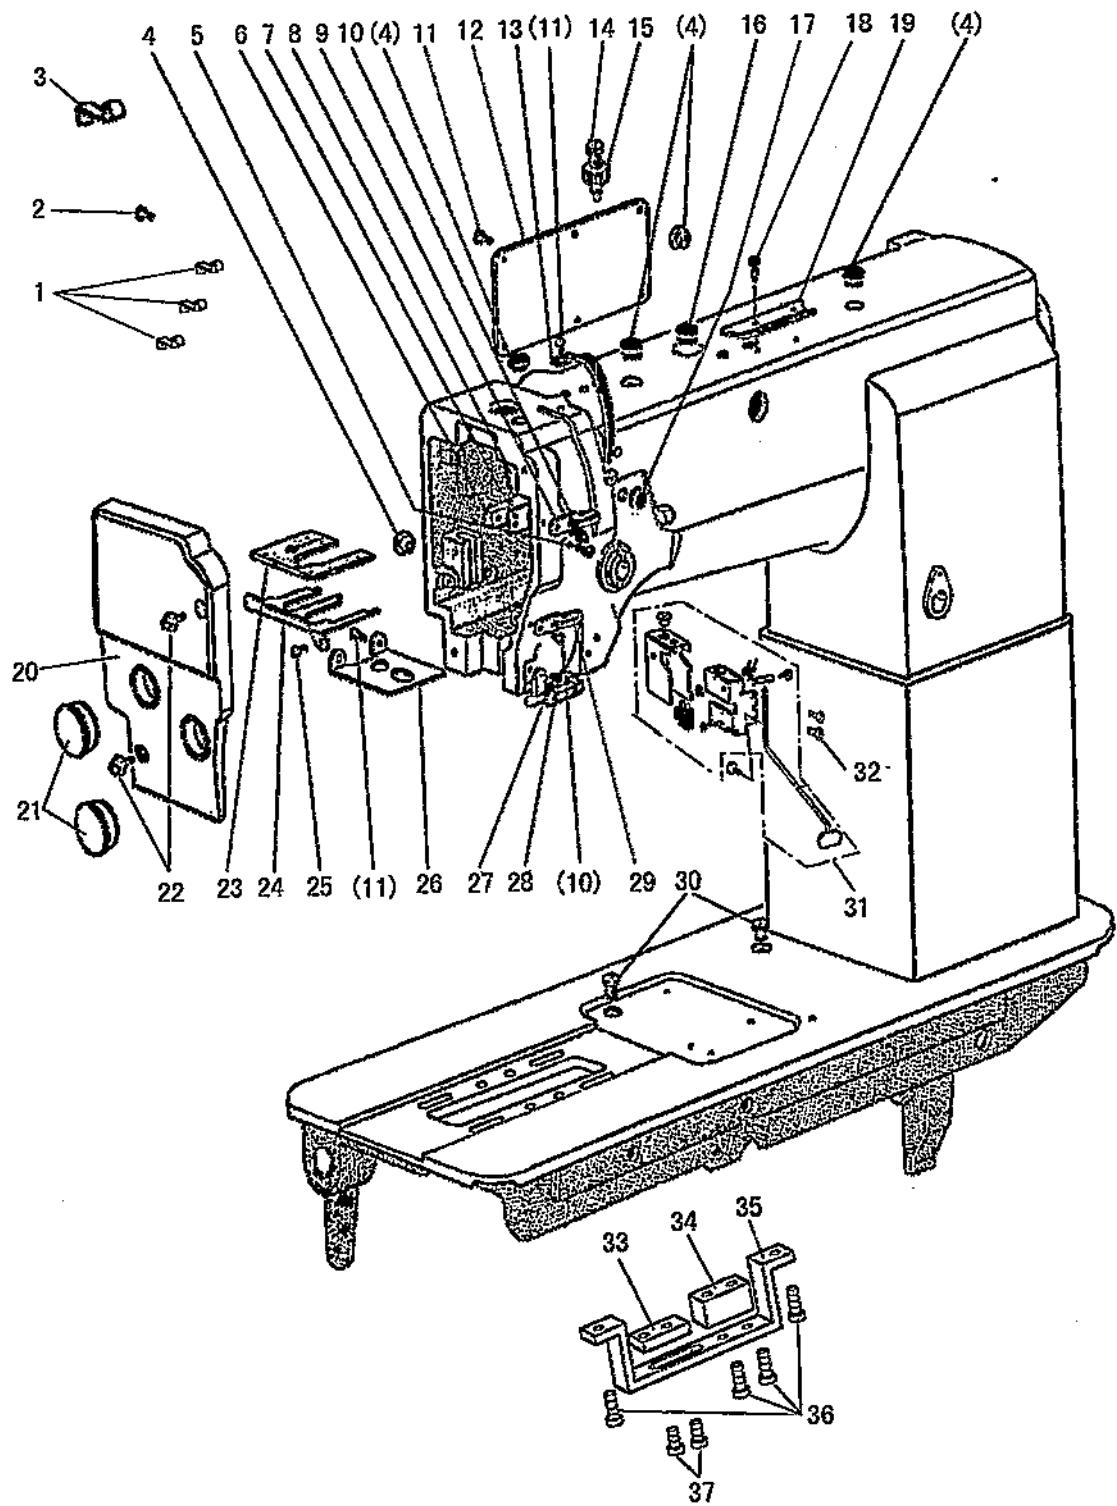

- 1) Rotate the balance wheel to lower the needle to the DOWN position .
- 2) While keeping the DOWN position, press the cam follower crank to enter the roller into the trimmer cam groove.
- 3) Adjust the trimmer cam so that the movable knife starts moving when the balance wheel is turned by hand and the green mark point on the balance wheel meets the black point on the arm.

To adjust, loosen two trimmer cam screws A.

19
