1. SAFETY

1) GENERAL SAFETY TIPS

- ① The machine should only be used after studying the accompanying instruction manual and only by specially instructed operating staff.
- ② Before bringing the machine into service read the safety tips and the instruction manual of the engine manufacturer.
- ③ The machine may only be used according to their regulations and not without the accompanying protective fittings. All relevant safety regulations should also be observed.
- ④ When changing sewing tools (for example needle, presser foot, needle plate and bobbin winder), when threading up, when leaving the work place as well as during maintenance work the machine should be unplugged or switched off at the main switch.
- ⑤ Daily maintenance work should only be carried out by specially trained personnel.
- ⑥ Repair work as well as special maintenance work should only be carried out by skilled workers or specially trained personnel.
- ⑦ Working on the electrical equipment should only be carried out by qualified electricians.
- ⑧ Working on active parts and equipment are not permitted.
- ⑨ Only the spare parts provided by us should be used during repairs. We explicitly point out that the spare parts and accessories that are not supplied by us are also not tested or passed by us. The installation or use of such products can in certain circumstances reduce the predetermined quality of your machine. We take no responsibility for damage caused by the use of non-original parts.

2) IMPORTANT POINTS FOR THE EMPLOYER

- ① This instruction manual is a component of the machine and must always be at the disposal of the machine operators. It is necessary to read the manual before using the machine for the first time.
- ② Operation and maintenance personnel must be instructed on safety features of the machine and safe working methods.
- ③ The employer must ensure that the machine is only used if it is in perfect condition.
- ④ The employer should make sure that only authorised persons are permitted to work on the machine.
- ⑤ Further information can be obtained from the responsible sales office.

3) SERVICE AND TECHNICAL PERSONNEL

(1) Service Personnel

Service personnel are responsible for the preparing, running and cleaning of the machine as well as the elimination of faults in the sewing. Service personnel must observe the following points:

- ① to follow the safety guidelines in the instruction manual
- ② to avoid any type of work which may reduce the safety of the machine

- ③ to wear tight-fitting clothes and avoid wearing jewellery, like necklaces and rings
- ④ to report immediately changes in the machine which may reduce safety to the employer.

(2) Technical Personnel

Technical personnel are responsible for the lubrication, maintenance, repair and adjustments to the machine.

Technical personnel must observe the following points:

- ① To follow safety guidelines in the instruction manual
- ② Before beginning maintenance work the main switch must be switched off and it must be ensured that it will not be switched on again.
- ③ Working on active parts and equipment is not permitted.
- ④ After repair and maintenance work the protective covering must be put back and the electric control box must be closed.

4) DANGER TIPS (Fig.1)

① During operation a space of 1m in front of and behind the machine should be maintained so that unrestricted access is possible.

② During sewing do not reach into the needle area! Be careful of the danger of injury from the needle.

③ During operation do not leave objects lying on the table or in the needle plate tongue. Objects can get jammed or knocked away. Danger of injury will result.

④ With mechanically operated clutch motors without operation barriers, operators should wait for the motor to stop. Danger of injury will result.

⑤ Do not use the machine without the thread take-up cover 1! Danger of injury from the movement of the threaded will result.

⑥ Do not use the machine without the finger guard 2! Danger of injury from the outward and upward movement of the needle will result.

⑦ Do not use the machine without the lifting arm cap 3!
Danger of injury from the rotating arm will result.

⑧ Do not use the machine without the belt cover 4! Danger of injury from the rotating belt will result.

Fig.1

2. TESTING, TRANSPORT & STORAGE

1) TIPS ON TESTING

The machine was tested before delivery according to the EN60204-3-1 edition 1/86.

2) TRANSPORT WITHIN THE CUSTOMER SITE

Transport within the customer site is not the responsibility of the manufacturer. It should be ensured that the machine is correctly transported.

3) STORAGE

The machine can be stored unused for up to 6 months. It should be protected against dirt and moisture. If the machine is to be stored longer the individual parts, in particular the sliding plates, should be protected against corrosion, with an oil film for example.

3. INSTALLATION & FIRST OPERATION

The machine should only be installed and started by qualified technical personnel. All the relevant safety regulations should be observed. Suitable electricity supply must be available at the installation site (see technical data). It must be ensured that there is an even and solid ground surface as well as sufficient lighting at the installation site.

1) ASSEMBLING THE BOBBIN STANDS

Place the bobbin stands in the drill hole in the table plate and fix them into place with the enclosed nuts.

2) FIRST OPERATION

Before the first operation check the electric cables in case of any possible damage.

- ① Clean and oil the machine thoroughly
- ② Allow technical specialists to check whether the machine's motor may be connected to the available main supply and whether it is properly plugged in. If there is any deviation, do not start the machine.
- ③ When the machine is running the balance wheel should be turned towards the operator. Otherwise let technical specialists adjust the motor.

4. SPECIFICATIONS

Max. Sewing Speed	2200rpm			
Max. Stitch Length	6mm			
Thread Take-up Lever Stroke	59.55mm			
Needle Bar Stroke	33.4mm			
Presser Foot Stroke	By Hand	8mm	By Knee	13mm
Needle	DP×35LR 18#-21#			
Lubrication System	Manual			

5. PREPARATION

① All regulations and guidelines in this manual should be observed, with special attention being paid to safety regulations.

② All preparation work may only be carried out by specially instructed personnel. Before all preparation work the machine should be disconnected from the main electricity supply by switching off the main switch or unplugging it.

1) ATTACHING THE NEEDLE (Fig.2)

The choice of the right needle depends on the model of the machine as well as the thread and material to be used.

- ① Switch off the machine!
- ② Loosen needle-holding screw
- ③ Put the needle in as far as it will go (the long needle groove should point to the left)
- ④ Tighten needle-holding screw 1

2) WINDING THE LOWER THREAD, REGULATING THE TENSION OF THE THREAD (Fig.3)

- ① Put an empty bobbin onto the bobbin shaft and thread the thread according to Fig 3
- ② Push the bobbin catch in the direction of the arrow
- ③ The bobbin is filled during the progress of the sewing.
- ④ The bobbinet stops automatically when the bobbin is full.
- ⑤ The tension of the thread on the bobbin can be adjusted with knurl-screw 2.

Fig.3

3) TAKING OUT THE BOBBIN CAPSULE (Fig.4)

Switch off the machine.

(1) Take the bobbin capsule out

- ① Lift up handle and take out bobbin capsule. Thread the bobbin capsule.
- ② Thread the bobbin according to Fig 4
- ③ The bobbin should point in the direction of the arrow when taking up the thread.

(2) Putting the bobbin capsule into place

Switch off the machine.

- ① Pulling out 5cm thread tail from the bobbin
- ② Hold the bobbin so that the bobbin thread is would in right direction and put it into the hook

Fig.4

4) ROUTING THE UPPER THREAD (Fig.5)

Switch off the machine.

Route the machine according to fig 5. The needle should be routed from the left (see arrow).

5) REGULATING THE TENSION OF THE THREAD (Fig.6)

(1) Upper thread tension (Fig. 7)

Regulate the tension 1 so that the stitches tie together in the sewing mate

(2) Lower thread tension (Fig. 8)

Lower thread tension can be adjusted by rotating screw "A".

Fig.8

Fig.9

6. STITCH LENGTH ADJUSTING LEVER / REVERSE SEWING (Fig.9)

1) Adjust length of stitches by turning the knurl nut 1

2) Reverse Sewing

Push the knurl nut 1 up as far as it will go (position R)

7. MAINTENANCE & CARE

1) MAINTENANCE AND CARE INTERVALS

- ① Cleaning - daily, more often with constant use.
- ② General oiling - twice weekly.
- ③ Oiling of the head - twice weekly.
- ④ Oiling of the rotating hook - daily.

2) CLEANING

Switch off the machine!

- ① Clean the rotating hook and rotating hook area daily, more often with constant use.
- ② Bring the needle bar to its highest position and remove the free arm cap.
- ③ Take out the bobbin capsule and bobbin.
- ④ Unscrew capsule holder piece.
- ⑤ Take out screw and lift up the rotating hook handle.
- ⑥ Turn the balance wheel until point stands at the same height as rotating hook point .
- ⑦ Take out the lower capsule and clean the rotating hook path with petroleum.
- ⑧ Put it back together in reverse order of the above. Make sure that the nose on the back of the capsule holder piece meshes with groove.
- ⑨ Unscrew rotating hook handle and put in the bobbin capsule with bobbin.
- ⑩ Draw back the free arm cap.

3) GENERAL OILING (Fig.10, Fig.11)

Use white spindle oil.

Oil all the bearing positions shown in Fig 10 and 11 twice weekly.

Danger of being crushed between the top part and the base!

Fig.11

Fig. 10

4) OILING THE HEAD (Fig.12)

Switch off the machine!

① Take off the cover and oil all the bearing and sliding positions shown in fig 12 twice weekly.

② Then screw the cover back on.

Use white spindle oil.

5) OILING THE ROTATING HOOK (Fig.13)

Switch off the machine!

① Take the bobbin capsule out and drip one or two drops of oil into the rotating hook path (fig 13) once daily.

② Then put the bobbin capsule back in.

Fig.12

Fig.13

8. ADJUSTMENT

1) TIPS FOR ADJUSTMENT

① All adjustments in this manual apply to a completely assembled machine. Covers, which have to be unscrewed and screwed on again for adjustment work are not mentioned in the text.

② The screws or nuts mentioned in brackets are to be loosened before adjustments and tightened again afterwards.

2) ABBREVIATIONS

UD – Upper deadlock

LD – Lower deadlock

3) POSITION OF THE FEED DOG (Fig.14)

The feed dog 1 should be the same distance right and left from the needle plate.

Move the feed dog 1 (screws 2) according to the above rule.

4) NEEDLE HEIGHT (PRE-ADJUSTMENT) (Fig.15)

When the needle bar is in lower position the distance between the needle bar and the needle plate should be 18.9mm.

Move needle bar 1 (screw 2) according to the rule above without turning it to the side.

5) NEEDLE IN THE MIDDLE OF THE STITCHING WHOLE (Fig.16)

With the length of the stitch at '0' the needle should pierce exactly in the middle of the needle plate hole.

- ① Unscrew the presser foot 1 and the walking foot 2.
- ② Adjust the stitch-length to '0' and bring the needle bar to upper position.
- ③ Insert a new needle, loosen screws 3, 4, 5 & 6.
- ④ Bring the needle immediately over the feed dog by turning the balance wheel.
- ⑤ Move the needle bar 7 according to the rule.
- ⑥ Tighten screws 3, 4 & 5.
- ⑦ Bring stop 8 up to the needle bar area 7 and tighten screw 6.

Note: The needle bar 7 in guide 9 and the needle rock frame should move easily.

6) PRESSER FOOT, WALKING FOOT AND FEED DOG SLIDING MOVEMENT

(Fig.19)

When adjusting the maximum stitch-length and when the needle bar is in lower position, walking foot, presser foot and feed dog should make no movement when operating the lever.

- ① Adjust the maximum stitch length
- ② Loosen screw 1 only enough so that the feed lifting cam 2 turns round the shaft.
- ③ Bring the needle into lower position
- ④ While retaining this position, first push the eccentricity of the feed lifting cam 2 upwards, observing the above rule when operating the lever.
- ⑤ Tighten screws 1.

7) HOOK POSITIONER, GRAB DISTANCE AND NEEDLE HEIGHT (Fig. 20)

When the stitch length is '0' and the position of the hook positioner is 1.8mm below the LD needle bar then;

- ① The grab point should stand at 'mid-needle' and the distance to the needle should be 0.05 – 0.1mm'
- ② The top edge of the eye of the needle should be 0.8mm below the grab point.

I) Adjust the stitch length to '0' and loosen screws 1 & 2 (screw 2 is on the back of the machine)

II) Bring the needle to lower position and push the 1.8mm thick measuring plate well under the lower needle bar bearing, bring the screw clip down to the measuring plate and screw tight.

III) Remove the measuring plate and turn the balance wheel until the screw clip lies at the needle bar.

IV) Push the grab onto the grab shaft according to rule ①

V) Turn the grab according to rule ② (adjust the needle height afterwards if necessary)

VI) Bring the grab shaft bearing 3 towards the grab and tighten screw 2.

VII) Tighten screw 1 making sure that the bevel wheel 4 is level with bearing 5.

12) BOBBIN WINDER (Fig.23)

① When the bobbin winder is activated the spindle should also be activated: When the bobbin winder is deactivated the rubbing wheel 5 should not stand next to the drive wheel

② The bobbin winder should switch itself off when the filled quantity is still 1mm from the edge of the bobbin.

I) Push the drive wheel 1 (screws 2) according to rule 1.

II) Place a bobbin on the bobbinet, thread up the bobbin and switch on the bobbin winder.

III) Tighten bolts 3 (screws 4) according to rule 2.

Fig.23

13) ADJUSTMENT OF PRESSER PRESSURE (Fig.24)

The material should move smoothly even at top sewing speed. No pressure should show on the material.

Turn screw 1 according to the above rule.

Fig.24
