## **1. PRECAUTIONS BEFORE STARTING OPERATION**

### **1) Safety precautions**

- (1) When turning the power on, keep your hands and fingers away from the area around/under the needle and the area around the pulley.
- (2) Power must be turned off when the machine is not used.
- (3) The power must be turned off before tilting the machine head, installing or removing the "V" belt, adjusting the machine, or when replacing.
- (4) Avoid placing fingers, hairs bars etc. nears the pulley, "V" belt, bobbin winder pulley, or motor when the machine is operation. Injury could result.
- (5) Do not insert fingers into the thread take-up cover, under/round the needle, or pulley when the machine is in operation.
- (6) If a belt cover, finger guard, and/or eye guard are installed, do not operate the machine without these safety devices.

### **2) Precaution before Starting Operation**

- (1) Never operate the machine unless it has been properly lubricated.
- (2) If a drop oiler lubricates the machine, never operate the machine before lubricating.
- (3) When a new sewing machine is first turned on, verify the rotational direction of the pulley with the power on.(the pulley should rotate counterclockwise when viewed from the pulley.)
- (4) Verify the voltage and (single or three) phase with those given on the motor nameplate.

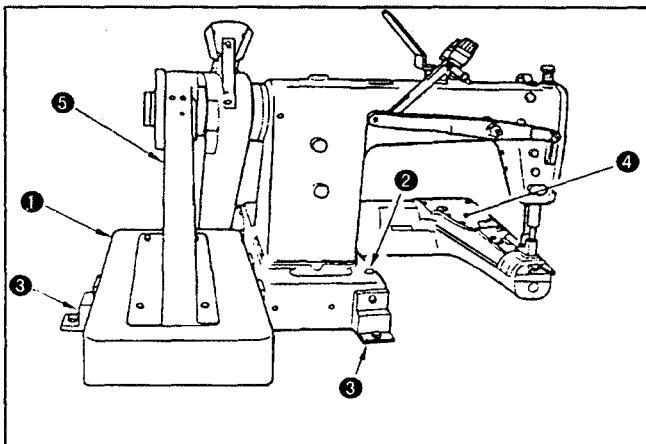

### **3) Precaution for Operating Conditions**

- (1) Avoid using the machine at abnormally high temperature (35°C or higher) or low temperature (5°C or lower). otherwise, machine failure may result.
- (2) Avoid using the machine in dusty conditions.
- (3) Avoid using the machine in areas where too much electrical noise, resulted from the high-frequency welder and others, is generated.
- (4) For the first month after the installation of your machine, run it at a lower speed (approx. 3,300rpm)

## 2. SPECIFICATIONS

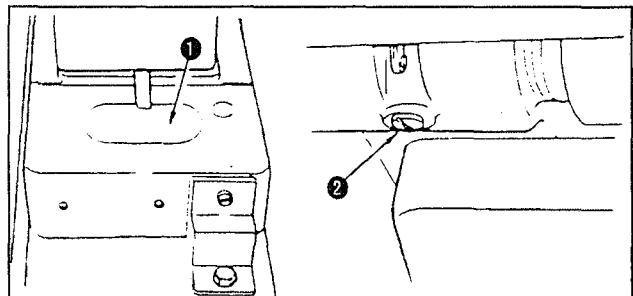

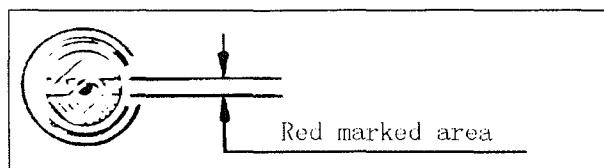

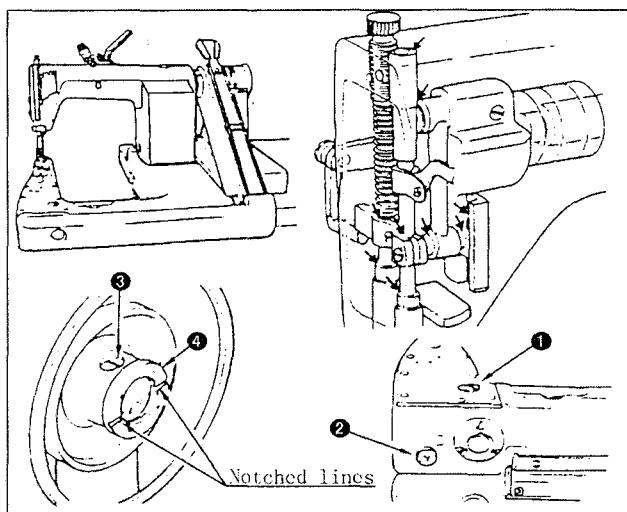

Application	For light weight materials
Number of needles	2
Sewing speed	Max. 4,000 rpm (normal)
Needle	ORGAN TV × 64 - NY#12 to NY#19 (standard #16 )
	SCHMETZ B-64 Nm80- Nm120 (standard Nm100)
Height of presser foot	10mm
Stitch length	1.2 to 3.2mm
Needle gauge	4.8, 6.4 mm
Circumference of cylinder	173mm

## 3. SETTING UP THE SEWING MACHINE

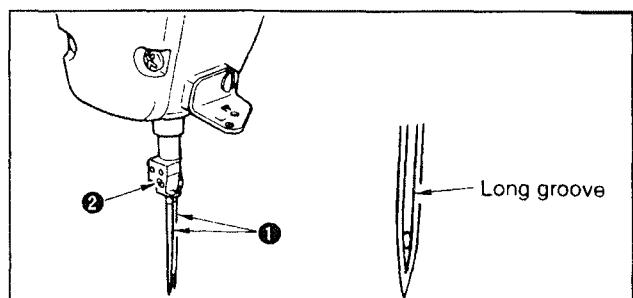

- 1) Attach belt protector mounting base ⑦ to the sewing machine.
- 2) Put the sewing machine on the table, and determine the position of the sewing machine (belt groove and lifting chain passing hole ② ).
- 3) Attach two rubber cushions ③ to the sewing machine and fix them with bolts and nuts.
- 4) Place a level on side plate ④ of the bed in the lateral direction then in the longitudinal direction to confirm that the sewing machine is horizontally placed on the table.
- 5) Attach belt protector ⑤ to the belt protector mounting base.

## 4. LUBRICATION

## 5. ATTACHING A NEEDLE

### \* Before operating the sewing machine

- 1) Remove screw ① from the lubrication hole  
Pour New Defrix Oil No. 1 from the hole until the oil surface reaches the mark on oil sight window ②
- 2) Turn the hand wheel until the notched lines on the oil cup ④ are leveled. Now, remove screw ③ from the lubrication hole, and pour the oil until the oil surface reaches the notched lines on the oil cup (approx. a half of the oil capacity of the cup).
- 3) Run the sewing machine for a few minutes, then check the amount of oil again. If the amount of oil is insufficient, pour the oil further until the machine is filled with a proper amount of oil.
- 4) If the sewing machine has not been used for a long time, lubricate the section marked with an arrow (↔) with a few drops of oil.

To operate the sewing machine for the first time after the set-up of the machine or after it has not been used for a long time, fill the oil cup fully with the oil. Check that the oil level is always held within the red marked area on the oil sight window.

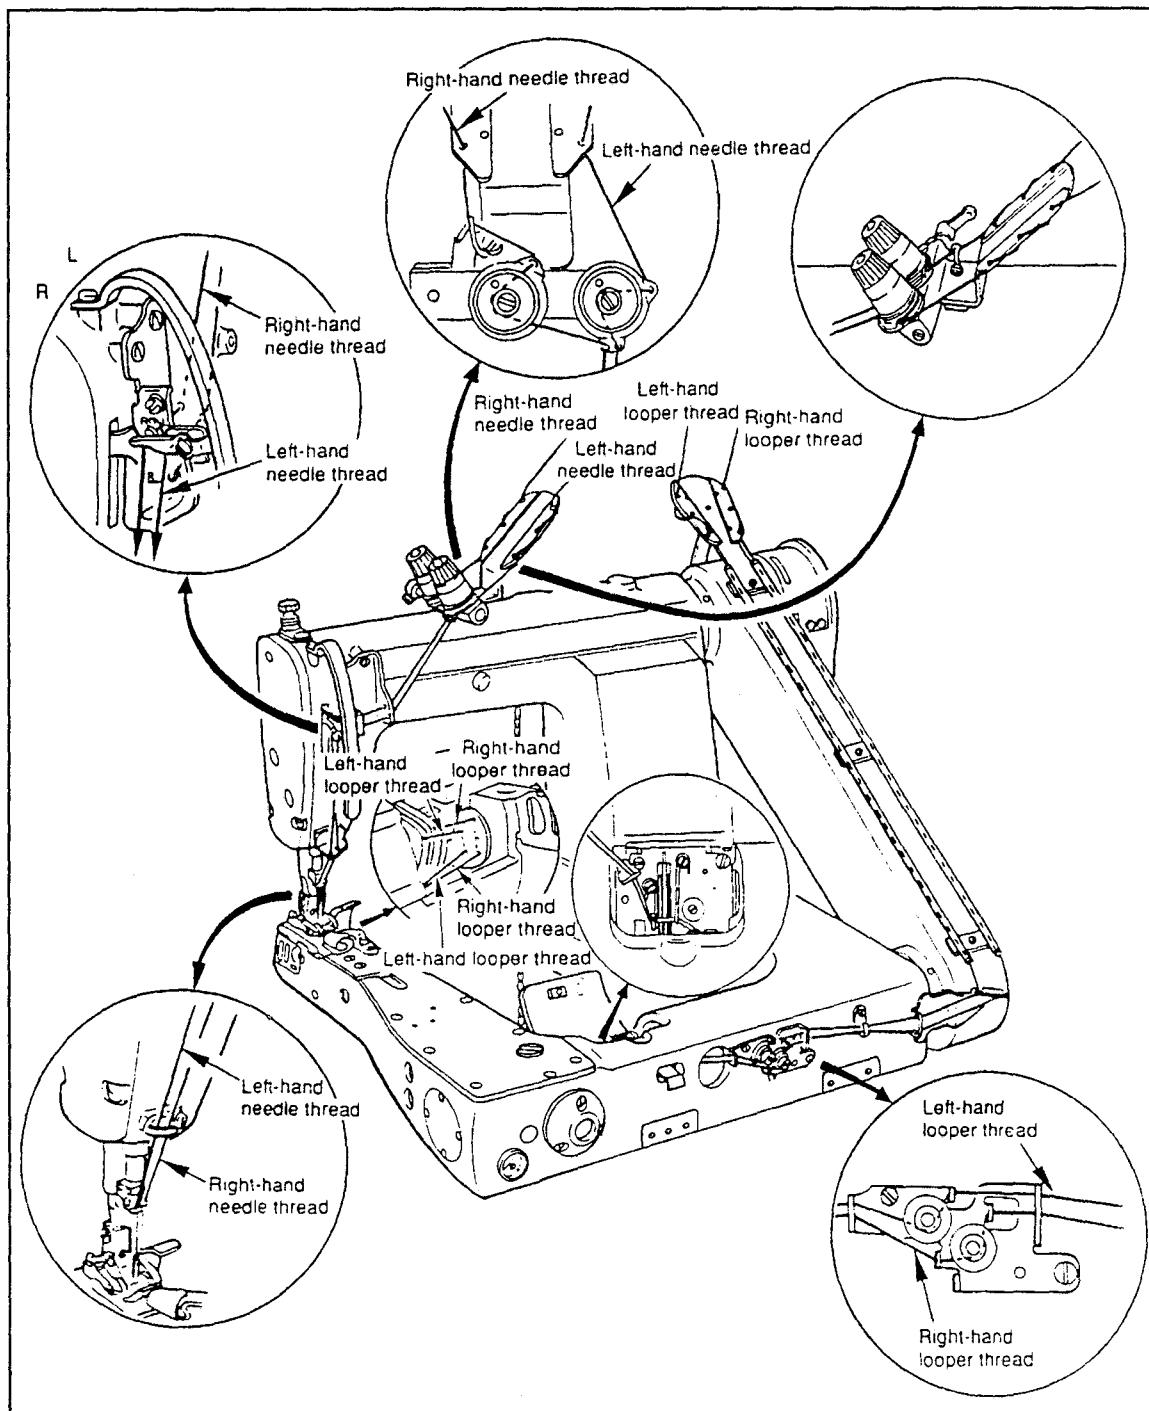

- a If the oil has gathered in groove ① of the oil reservoir, wipe it off with rags.
- b Extract the oil, which has gathered in the bed, from time to time, by removing cover ② from the draining hole in the hook driving shaft.

### Turn OFF the power to the motor.

Make a choice of the needle count in accordance with thickness of the thread and type of the material to be used.

- 1) Turn the hand wheel until the needle bar reaches to the highest position of its stroke.
- 2) Loosen screw ② in the needle clamp, and turn needles ① so that the long groove on the respective needles is brought in front of you.
- 3) Insert the needles into the needle clamp hole until they will go no further
- 4) Securely tighten needle clamp screw ②

## 6. THREADING THE MACHINE HEAD

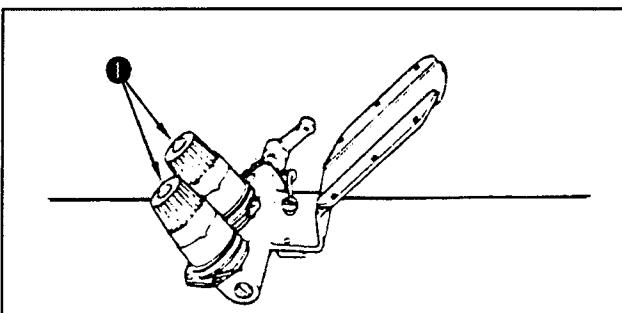

Thread the machine head in the order shown in the figure.

- Pass the needle threads along the marks L and R.

L: left-hand needle thread

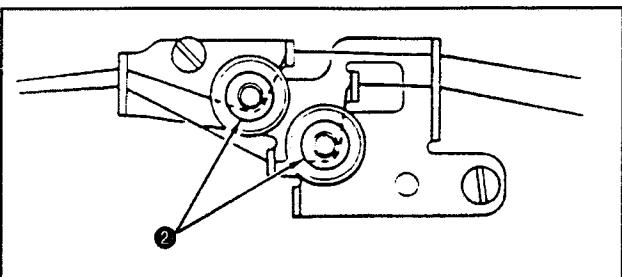

R: right-hand needle thread

## 7. THREAD TENTION

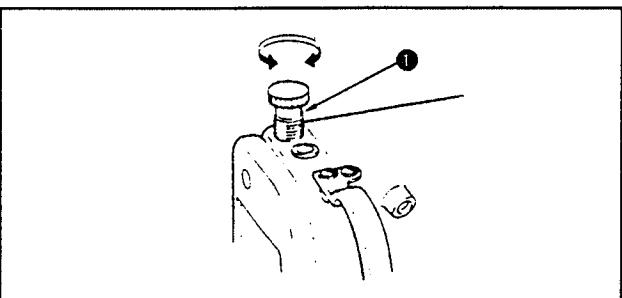

(1) Adjusting the needle thread tension

Turning tension nuts ① clockwise increases the needle thread tension. Turning it counterclockwise decreases the needle thread tension.

(2) Adjusting the looper thread

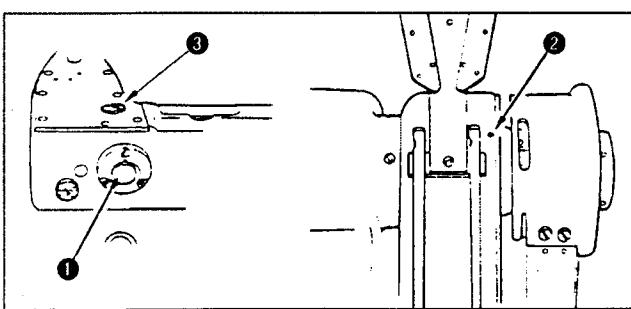

Tension turning looper thread tension adjusting knobs ② clock-wise increases the looper thread tension. Turning it counter-clock-wise decreases the looper thread tension.

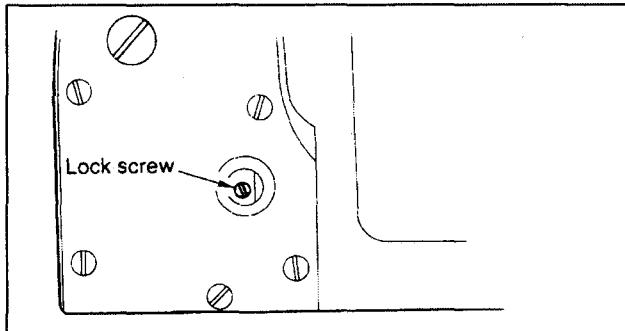

### THREAD TENTION

Turning presser spring regulator ① clockwise increases the pressure of the presser foot. Turning it counter-clock-wise decreases the pressure

## 8. ADJUSTING THE STITCH LENGTH

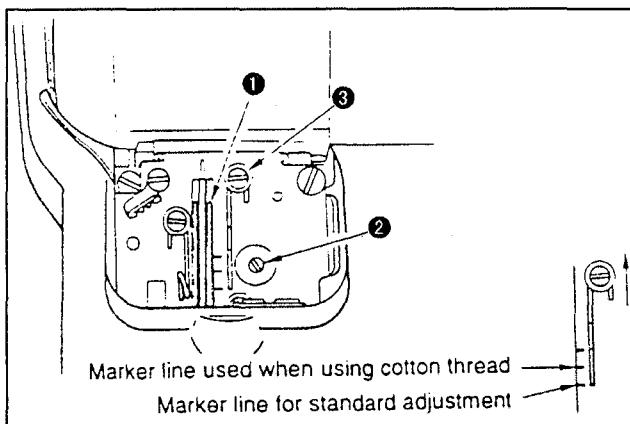

- 1) Remove screw ③ and loosen the lock screw in the feed rock cam
- 2) Lightly pressing push-button ① turn the hand wheel by hand.
- 3) When the push-button bites, the hand wheel will not turn any longer.
- 4) In the aforementioned state, further pressing the push-button, turn the hand wheel by hand.
- 5) Align the division (indicating the desired value) with marker dot ② engraved on the sprocket gear cover. Then, release the push-button. Tighten the lock screw in the feed rock cam.
- 6) Tighten the lock screw in the feed rock cam. Attach screw ③ in place.

#### Caution

Never press the push-button while the sewing machine is in operation. Be sure to operate the sewing machine after tightening the lock screw. Never operate the machine with screw 0 removed.

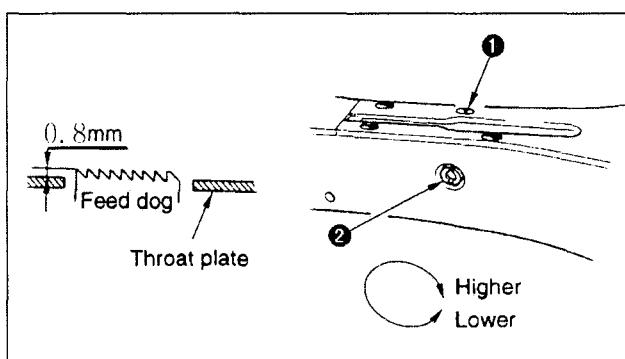

## 9. ADJUSTING THE LOOPER CAM

Loosen screw ②, and adjust looper cam ① so that it draws the thread when the looper starts returning to its home position after it has projected the most.

- 1) Adjusting the thread guide of the looper thread cam. Adjust the top end of the thread guide to the marker line. The standard position of the thread guide is obtained by adjusting the top end of the thread guide to the marker line located this side. If cotton thread is used, loosen screw ③ and adjust the top end of the thread guide to the center marker line. At this time, it is not necessary to re-adjust the looper thread cam timing.

## 10. HEIGHT OF THE FEED DOG

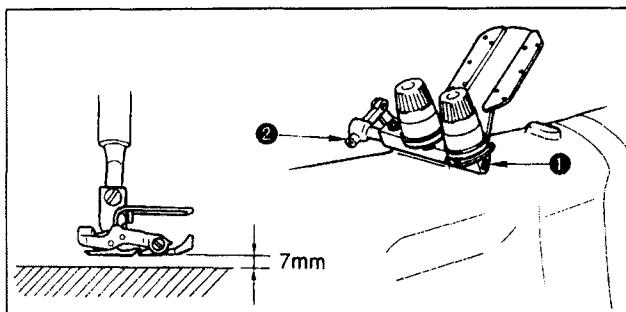

The top of the feed dog should rise 0.8 mm above the surface of the throat plate when the feed dog is in the highest position of its stroke.

#### Adjusting the feed dog height

- 1) Loosen screw ① in the side plate of the bed and remove it.
- 2) Remove the screw, and you fine a hexagon socket head screw under the screw. Loosen it with an L-shaped hexagon wrench key.
- 3) Adjust the feed dog height by turning feed driving amount adjusting shaft②
- 4) Fix the shaft with the hexagon socket head screw and tighten screw ①

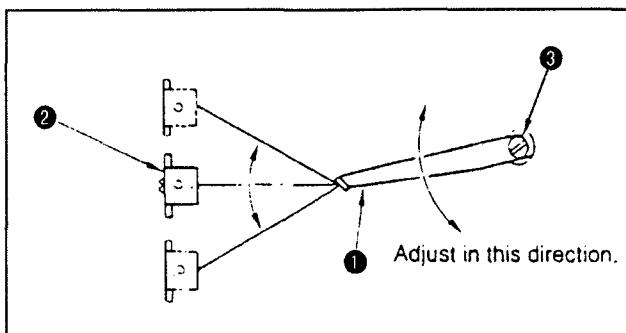

**(Caution)** It is not necessary to firmly fix the feed driving amount adjusting shaft.

## 11. TIMING TO RELEASE THE NEEDLE THREAD TENTION

Adjust so that the needle thread tension is released when the presser foot is lifted by 7mm above the surface of the throat plate. Loosen screw ② in tension releasing shaft ①, and adjust the timing to release the needle thread tension by turning the shaft clockwise or counterclockwise.

## 12. ADJUSTING THE INTERMEDIATE THREAD GUIDE

Loosen screw ③, and adjust the position of intermediate thread guide ① so that the thread inclines at equal degrees to horizontal when thread take-up lever ② is in its highest position and lowest position of its stroke.

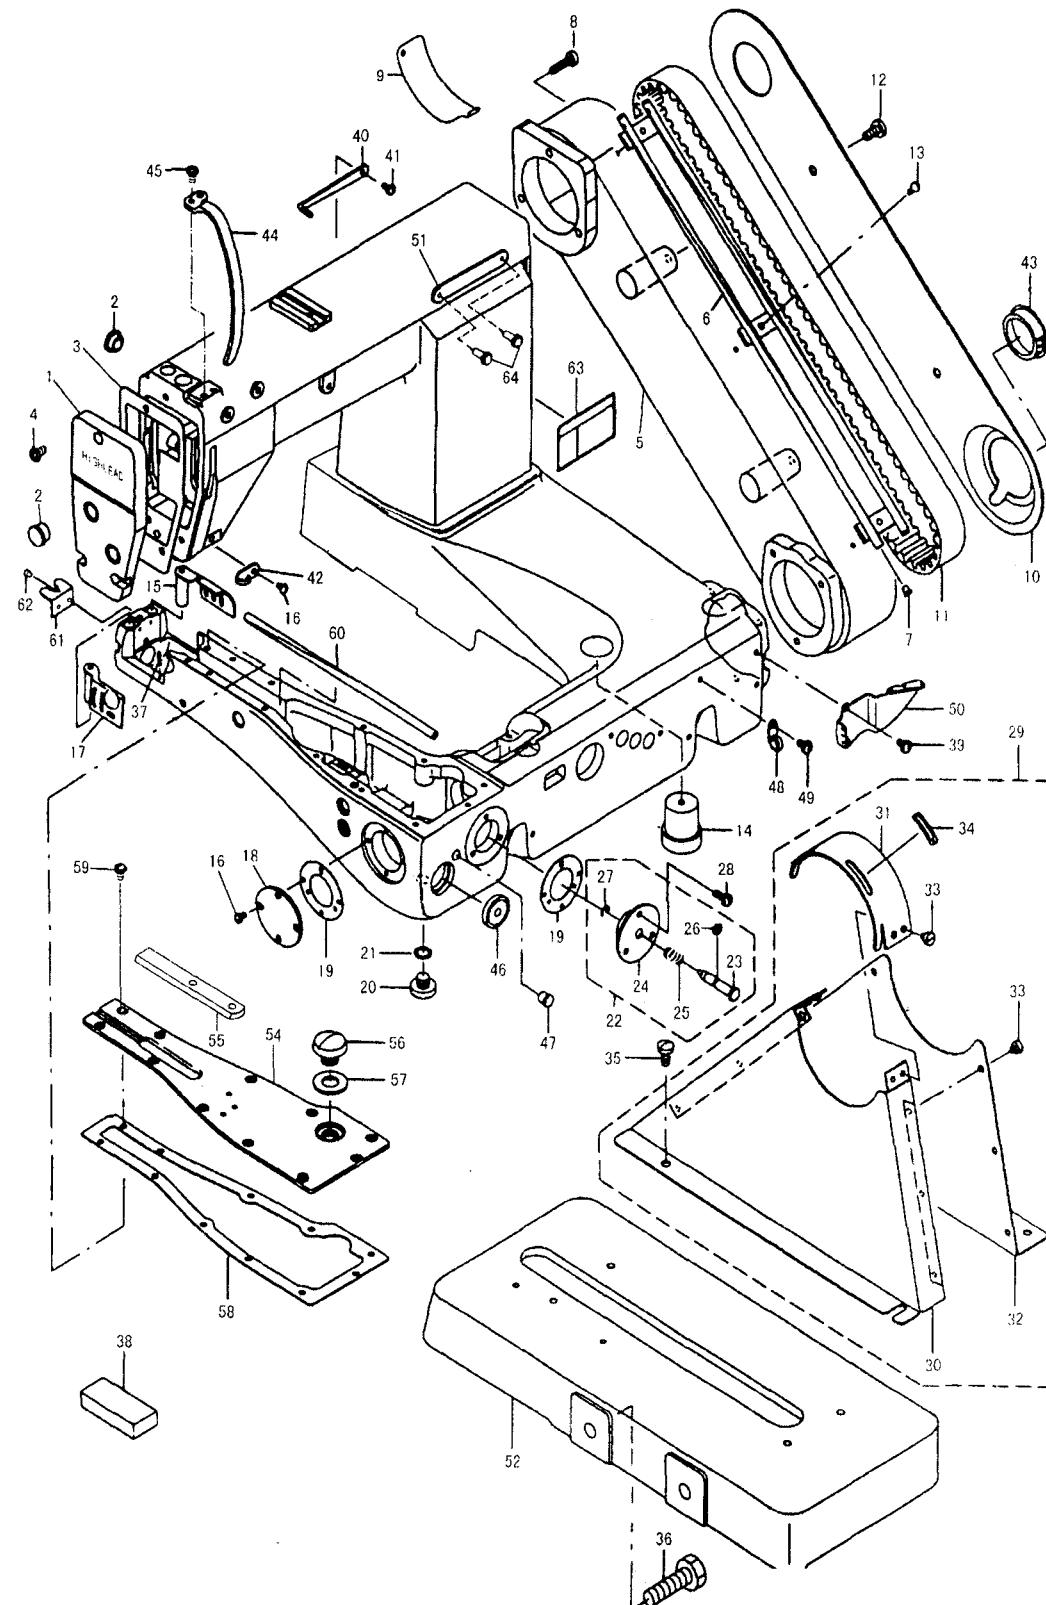

## 13. MOTOR PULLEY AND BELT

- 1) Use a clutch motor of 3-phase and 370 W (1/3 HP)
- 2) Use an M type V-belt. Part number of belt : M44
- 3) Outside diameter of motor pulley : 85mm

\* The effective diameter of motor pulley is obtained by subtracting 5 mm from its outside diameter.

\* The motor should rotate counterclockwise as observed from the hand-wheel side. Be careful not to allow the motor to rotate in the reverse direction.
