1. OPERATION TO DRIVE THE DEVICE (ACF MODE)

1-1. Name of each section of the operation panel

1-1-1. Body

- ① Touch panel · LCD display section
- READY key → Changeover of the data input screen and the sewing screen can be performed.
- ③ INFORMATION key → Changeover of the data input screen and the information screen can be performed.
- COMMUNICATION key → Changeover of the data input screen and the communication screen can be performed.
- **MODE key** → Changeover of the data input screen and the mode changeover screen which performs various detail settings can be performed.
- 6 Smart media card slot (Close the cover for use.)
- Slide switch (Not used. OFF)
- 8 Connector for RS232C communication
- ① Connector for external input
- ① Cable

1-1-2. Buttons to be used in common

The buttons which perform common operations in each screen of IP200 are as follows:

CANCEL button → This button closes the pop-up screen.

In case of the data change screen, the data being changed can be cancelled.

ENTER button → This button determines the changed data.

UP SCROLL button → This button scrolls the button or the display in the upward direction.

RESET button \rightarrow This button performs the release of error.

NUMERAL INPUT button → This button displays ten keys and input of numerals can be performed.

SEWING DATA DISPLAY button \rightarrow This button displays the sewing data list

corresponding to the pattern No. being selected.

→Refer to 2-7.CHANGING SEWING DATA,p.44.

 $\textbf{ACF PATTERN NAME setting} \quad \rightarrow \quad \text{This button displays the character input screen}.$

→Refer to 1-11. Naming the pattern, p.30.

PRESSER DOWN button \rightarrow This button lowers the presser and displays the presser down screen.

To raise the presser, press PRESSER UP button displayed in the presser down screen.

 $\textbf{BOBBIN WINDER button} \quad \boldsymbol{\rightarrow} \quad \text{This button performs bobbin thread winding}.$

→Refer to 1-6. WINDING BOBBIN THREAD, p.17.

1-2. BASIC OPERATION OF THE SEWING MACHINE

① Turn ON the power switch.

When the power is turned ON, the ACF data input screen is displayed.

2 Select the pattern No. you desire to sew.

When ACF pattern selected button (A) which is selected at present is pressed, selection of ACF pattern No. can be performed. For the selecting procedure of ACF pattern No, refer to 1-4. Performing ACF pattern selection, p.14.

For the details of this screen, refer to <u>1-3-1</u>.
ACF data input screen, p.8.

3 Set the sewing machine to sewing possible state.

When the sewing machine is set to sewing possible state, the back-light of LCD display changes to green color and ACF automatic sewing screen is displayed.

4 Start sewing.

Set the sewing product and press the knee switch or hand switch (switch set to the start switch). Then the sewing machine automatically starts and sewing starts.

- For the setting procedure of the start switch, refer to <u>2-17.</u>
 CHANGING MEMORY SWITCH DATA,p.78.
- For the detailed explanation of this screen, see <u>1-3-2.</u>
 Automatic sewing screen, p.11.

1-3. LCD display section under ACF mode

1-3-1. ACF data input screen

	Button and display	Description
Α	ACF PATTERN NEW REGISTER button	ACF pattern No. new register screen is displayed. → Refer to 1-8. Performing new register of ACF pattern.,p.21.
В	ACF PATTERN COPY button	ACF pattern No. copy screen is displayed. → Refer to 1-9. Copying ACF pattern,p.27.
С	ACF PATTERN NAME SETTING button	Sewing pattern name input screen is displayed. → Refer to 1-11. Naming the pattern,p.30.
D	EQUAL INTERVAL INPUT button	Number of buttonholes input screen is displayed and ACF pattern data being selected at present can be edited. → Refer to 1-8-1.©Input the number of buttonholes,p.22.
E	PRESSER DOWN button	Presser can be lowered and the presser down screen is displayed. To raise the presser, press the presser up button which is displayed in the presser down screen.
F	BOBBIN WINDER button	Bobbin thread can be wound.→ Refer to <u>1-6. WINDING BOBBIN</u> <u>THREAD,p.17.</u>
G	ACF PATTERN SELECTION button	ACF pattern No. being selected at present is displayed on this button and when this button is pressed, ACF pattern No. selection screen is displayed. → Refer to 1-4. Performing ACF pattern selection,p.13.
Н	NUMBER OF BUTTONHOLES REGISTERED	Number of buttonholes registered to ACF pattern No. being selected at present is displayed.being selected at present.
I	MEN'S/LADIES' WEAR SELECTION button	Every time this button is pressed down, men's and ladies' wear can be changed over alternately. → Refer to 1-10. Changeover of men's and ladies' wear.p.29.
J	PAIR STACKING ON/OFF SELECTION button	Every time this button is pressed down, pair stacking ON/OFF can be changed over. This button is displayed only when the pair stacking use setting of memory switch data (level 1) U54 is ON. →Refer to 2-17. CHANGING MEMORY SWITCH DATA,p78.

	Button and display	Description
К	SEWING ORDER display	Sewing order of the sewing data displayed on the right-hand side is displayed.
L	PATTERN BUTTONHOLE No. INPUT button	LBH sewing data No. registered to ACF pattern being selected at present is displayed on this button and when this button is pressed, LBH sewing data No. can be changed.
М	ACF PATTERN NAME display	Name registered to ACF pattern No. being selected is displayed. →Refer to 1-11. Naming the pattern,p.30.
N	ACF MODE AND LBH MODE CHANGEOVER button	When this button is pressed down, LBH data input screen is displayed and operation or setting of the single unit of the sewing machine is possible. →Refer to 2. OPERATION OF THE SINGLE UNIT OF SEWING
		MACHINE AND SETTING PROCEDURE (LBH MODE),p.31.
0	JUMP FEED AMOUNT INPUT button	Inputted jump feed amount is displayed on the button. In addition, when the button is pressed down, the jump feed amount input screen is displayed and edit of data can be performed. This button is displayed only when with/without jump feed input selection of memory switch data (level 1) use is ON.
		→ Refer to <u>2-17-2. Memory switch data list,p.80.</u>
Р	FEED AMOUNT INPUT button	When this button is pressed down, the feed amount input screen is displayed and edit of the data can be performed.
Q	TURN PAGE button	displayed only when 7 or more of the sewing patterns are registered and it is possible to observe the sewing data not displayed on the sewing screen.

1-3-2. Automatic sewing screen

	Button and display	Description
Α	NUMBER OF BUTTONHOLES	Number of buttonholes registered to ACF pattern No. being selected at
	REGISTERED	present is displayed.
В	ACF PATTERN NAME display	Name registered to ACF pattern No. during sewing is displayed.
С	KNIFE CANCEL button	Every time this button is pressed down, dropping of knife and
		non-dropping of knife can be changed over alternately.
D	PRESSRER DOWN button	Presser can be lowered and the presser down screen is displayed.
		To raise the presser, press the presser up button which is displayed in
		the presser down screen.
E	BOBBIN WINDER button	Bobbin thread can be wound.
		→Refer to <u>1-6. WINDING BOBBIN THREAD,p.17.</u>
F	ACF PATTERN No. display	ACF pattern No. during sewing is displayed.
G	JUMP FEED AMOUNT display	Only when jump feed is set, the amount is displayed.
Н	SEWING ORDER display	Sewing order of respective sewing patterns is displayed.
I	MANUAL SEWING	When this button is pressed down, the mode is changed to the manual
	CHANGEOVER button	sewing mode and the manual sewing screen is displayed.
		Note) Be careful since the pre-set is actuated.
J	COUNTER display	Existing counter value is displayed.
K	COUNTER CHANGEOVER	Every time this button is pressed down, sewing counter and No. of pcs.
	button	counter can be changed over.
L	PATTERN No. display	LBH sewing pattern No. registered to ACF data is displayed.
М	FEED AMOUNT display	Feed amount is displayed.
Ν	CONTENTS OF PATTERN	Sewing shape, cloth cutting length, width of left parallel section,
	DURING SEWING	thread tension, with/without double stitching, number of times of
	(BUTTONHOLE) display	basting, number of stitches of LBH pattern No. being sewn at present
		are displayed.
0	ACF MODE AND LBH MODE	When this button is pressed down, the LBH independent sewing screen
	CHANGEOVER button	is displayed and independent sewing is possible.
Р	SEWING SPEED variable resistor	Number of rotation of sewing machine can be changed.

1-3-3. Manual sewing screen

	Button and display	Description
Α	SEWING MACHINE START button	When the button is pressed down, sewing of LBH pattern data set to the step fed at C or D starts.
В	CARRIAGE TILT/RAISE button	This button is displayed only when the carriage is located at the position of origin. Every time the button is pressed down, tilt of carriage and raise of carriage can be changed over alternately.
С	CLOTH FEED, RIGHT button	In case of men's wear, carriage is returned to the previous LBH pattern data. In case of ladies' wear, carriage is advanced to the next LBH pattern data.
D	CLOTH FEED, LEFT button	In case of men's wear, carriage is advanced to the next LBH pattern data. In case of ladies' wear, carriage is returned to the previous LBH pattern data.
E	ONE STITCH FEED button	LBH pattern data set to the step fed at C or D is advanced by one stitch.
F	ONE STITCH RETURN switch	LBH pattern data set to the step fed at C or D is returned by one stitch.

1-4. Performing ACF pattern selection

① Display the data input screen.

Only in case of the ACF data input screen (pink), ACF pattern No. can be selected. In case of the sewing screen (green), press READY key and display the data input screen.

② Call the ACF pattern selection screen.

When ACF PATTERN SELECTION button (A) is pressed down, the ACF pattern selection screen is displayed.

3 Select the pattern No.

Press ACF pattern No. button (B) you desire to select.

4 Determine the pattern No.

When ENTER button (C) is pressed, the ACF pattern No. selection screen is closed. Then the selection has been finished.

When you desire to delete the registered ACF pattern, press DELETE button (D).

1-5. Performing re-sewing

When temporary stop switch (A) or (B) is pressed during sewing under ACF mode, the sewing machine interrupts sewing and stops. At this time, the error screen is displayed to inform that the temporary stop switch is pressed.

1 Release the error.

Press RESET button (C) to release the error. Then the manual sewing screen is automatically displayed.

2 Return the presser.

Press BACKWARD button (D), and the presser returns stitch by stitch. Press FORWARD key (E), and the presser advances stitch by stitch. In addition, when CLOTH FEED, RIGHT button (F) is pressed, sewing data returns by one, and when CLOTH FEED, LEFT button (G) is pressed, sewing data advances by one. Return the presser to the re-sewing position.

③ Perform again the sewing work from the start.

When the knee switch or hand switch (set to the start switch) is pressed, sewing starts again.

For the setting procedure of the start switch, refer to 2-17. CHANGING MEMORY SWITCH DATA,p.78.

Note) When taking out the cloth and performing re-sewing, advance the carriage up to the last with CLOTH FEED, RIGHT / CLOTH FEED, LEFT button (F and G).

1-6. WINDING BOBBIN THREAD

1 Set the bobbin.

Fit a bobbin fully onto the bobbin winder shaft. Then push the bobbin thread guide in the direction of the arrow mark.

2 Display the bobbin winding screen.

Press BOBBIN WINDER button (A) in the ACF data input screen (pink), the automatic sewing screen or manual sewing screen (green) and the bobbin winding screen is displayed.

3 Start bobbin winding.

When the switch set to the start switch is pressed with the knee switch or hand switch, the sewing machine rotates and starts winding bobbin thread.

4 Stop the sewing machine.

Press STOP button (B) and the sewing machine stops and returns to the normal mode. In addition, the sewing machine stops even when the temporary stop switch is pressed. However, the error screen is displayed to inform that the temporary stop switch is pressed.

→ Refer to <u>1-5. Performing re-sewing,p.15.</u> and <u>2-4. Performing re-sewing under LBH</u> mode,p.39.

Note) Remove needle thread from the thread take-up to needle before winding bobbin thread.

1-7. Using counter

1-7-1. Setting procedure of the counter

① Display the counter setting screen.

When MODE key is pressed from the ACF data input screen (pink), COUNTER SETTING button (A) is displayed on the screen. When this button is pressed, the counter setting screen is displayed.

2 Selection of the kinds of counters.

This sewing machine has two kinds of counters, i.e., sewing counter and No. of pcs. counter.

Press SEWING COUNTER KIND

SELECTION button (B) or NO> OF PCS.

KIND SELECTION button (C) to display the counter kind selection screen. The kinds of respective counters can be set separately.

[Sewing counter]

Every time the sewing of one shape is performed, the existing value is plussed by one. When the existing value is equal to the set value, the count-up screen is displayed.

DOWN counter

[No. of pcs. counter]

Every time the sewing of one ACF data is performed, the existing value is pulsed by one. When the existing value is equal to the set value, the count-up screen is displayed.

Every time the sewing of one ACF data is performed, the existing value is minus by one. When the existing value is reached to "0", the count-up screen is displayed.

3 Change of counter set value

In case of the sewing counter, press button (F) and in case of the No. of pcs. counter, press button (G) and the set value input screen is displayed.

Here, input the set value.

4 Change of counter existing value

In case of the sewing counter, press button (D) and in case of the No. of pcs. counter, press button (E) and the existing value input screen is displayed.

Here, input the existing value.

1-7-2. Count-up releasing procedure

When count-up condition is reached during sewing work, the count-up screen is displayed. CLEAR button (H) to reset the counter and the screen returns to the sewing screen. Then the counter starts counting again.

1-8. Performing new register of ACF pattern.

For the way of performing new register of ACF pattern, there are the equal interval input to set the number of buttonholes and the interval of buttons, and the individual input to individually set the buttonholes one by one.

1-8-1. Performing the equal interval input

① Display the data input screen.

Only in case of ACF data input screen (pink), new register of the ACF pattern can be performed.

2 Call ACF pattern new register screen.

Press NEW ACF REGISTER button (A) and the ACF pattern new register screen is displayed.

3 Input the pattern No.

Input ACF pattern No. you desire to newly register with the ten keys (B). When ACF pattern No. which has been already registered is inputted, the sewing data which has been registered is displayed in the upper part of the screen. Select ACF pattern No. which is not displayed and has not been registered. New register to ACF pattern No. which has been already registered is prohibited. It is possible to retrieve ACF pattern No. which has not been registered with the -/+ buttons (C ·D).

Note) It is possible for ACF patterns No. to use 20 patterns from 1 to 20.

ACF-172 ACF-172 100.0 100.0 100.0 100.0 M

4 Determine pattern No.

Press ENTER button (E) to determine the ACF pattern No. to be newly registered and the equal interval input selection screen is displayed.

5 Select the equal interval input.

Press ENTER button (F) to select the equal interval input, and the number of buttonholes input screen is displayed.

6 Input the number of buttonholes.

Input the number of buttonholes to continuously sew with the ten keys (G). It is possible to input from -/+ buttons (H · I) as well.

Press ENTER button (J) to determine the number of buttonholes and the feed amount input screen is displayed.

7 Input the feed amount.

Input the feed amount with the ten keys (K). It is possible to input from -/+ buttons \Box (L \cdot M).

Press ENTER button (N) to determine the feed amount and the LBH pattern selection screen is displayed.

8 Select LBH sewing pattern No.

Press UP/DOWN SCROLL buttons (O) and LBH sewing pattern No. buttons (P) which have been registered are changed over by turns. LBH sewing pattern No. and the contents of the sewing data are displayed in the buttons. Here, press the LBH sewing pattern No. you desire to select.

When INDEPENDANT
SEWING/CONTINUOUS SEWING
SELECTION CHANGEOVER button (Q)
is pressed, the screen is changed over to the
LBH continuous sewing pattern selection
screen.

Select the LBH continuous sewing pattern No.

R) and LBH continuous sewing pattern No. buttons (S) which have been registered are changed over by turns. The contents of continuous sewing pattern are displayed in the buttons. Here, press the LBH continuous sewing pattern No. you desire to select. When INDEPENDENT SEWING/CONTINUOUS SEWING SELECTION CHANGEOVER button (T) is pressed, the screen is changed over to the LBH CONTINUOUS SEWING pattern selection screen.

1 Determine pattern No.

When ENTER button (U) is pressed in the LBH pattern selection screen or LBH continuous sewing pattern selection screen, the data is determined and the selection has been finished.

1-8-2. Performing the individual input.

① Display the data input screen.

Only in case of the data input screen (pink), new register of ACF pattern can be performed.

2 Call ACF pattern new register screen.

Press NEW ACF REGISTER button (A) and the ACF pattern new register screen is displayed.

3 Input pattern No.

Input ACF pattern No. you desire to newly register with the ten keys (B). When ACF pattern No. which has been already registered is inputted, the sewing data which has been registered is displayed in the upper part of the screen. Select ACF pattern No. which is not displayed and has not been registered. New register to ACF pattern No. which has been already registered is prohibited. It is possible to retrieve ACF pattern No. which has not been registered with -/+ buttons (C · D).

Note) It is possible for ACF patterns No. to use 20 patterns from 1 to 20.

4 Determine pattern No.

Press ENTER button (E) to determine ACF pattern No. to be newly registered and the equal interval input selection screen is displayed.

5 Select the individual input.

When CANCEL button (F) is pressed, it means that the individual input is selected, and the ACF data input screen is displayed.

6 Select LBH pattern No.

When LBH PATTERN BUTTONHOLE No. INPUT button (G) is pressed, the LBH pattern selection screen is displayed.

7 Determine LBH pattern No.

Press LBH pattern No. you desire to sew from among LBH pattern Nos. (H) located at the bottom of LBH pattern No. selection screen.

Press ENTER button (I) to determine LBH pattern No. and the ACF data input screen is displayed.

8 Input the feed amount.

When FEED AMOUNT INPUT button (J) is pressed from ACF data input screen, the feed amount input screen is displayed. Input the feed amount from the ten keys (K). Press ENTER button (L) to determine the feed amount value and the ACF data input screen is displayed.

Register plural LBH pattern Nos.

In order to register plural LBH pattern Nos. to the ACF pattern data, repeat the operation of 6 through 8.

1-9. Copying ACF pattern

The data of ACF pattern No. which has been already registered can be copied to ACF pattern No. which has not been registered.

Overwriting copy of the pattern is prohibited.

When you desire to overwrite, perform it after

① Display ACF data input screen.

deleting the pattern once.

Only in case of ACF data input screen (pink), it is possible to copy ACF pattern.

② Call ACF pattern copy source selection screen

When ACF PATTERN COPY button (A) is pressed, the ACF pattern copy source selection screen is displayed.

3 Select ACF pattern No. of copy source.

Select ACF pattern No. of copy source from among ACF pattern list buttons (B).

Next, press COPY DESTINATION INPUT button (C) and the ACF pattern copy destination input screen is displayed.

4 Input ACF pattern No. of copy destination.

Input ACF pattern No. of copy destination from the ten keys (D). It is possible to retrieve the unused ACF pattern No. with -/+ buttons

(E · F).

5 Start copying.

When ENTER button (G) is pressed, copying starts. The screen returns to ACF pattern copy source selection screen in the state that the copied ACF pattern No. has been selected after approximately two seconds.

1-10. Changeover of men's and ladies' wear.

Perform changeover of men's and ladies' wear since men's and ladies' wear are different in the carriage direction of sewing products.

① Display ACF data input screen.

Display the ACF data input screen (pink) of ACF pattern No. you desire to sew.

② Perform changeover of men's and ladies' wear.

When MEN'S/LADIES' WEAR SELECT button

(A) is pressed, changeover of men's and ladies' wear can be performed.

Men's wear :

[Setting procedure of cloth]

In case of men's wear, the position where sewing products are preset is the sewing start position of the first sewing pattern. In case of ladies' wear, the place moved to the right-hand by 600 mm from the position where sewing products are preset is the sewing start position of the first sewing pattern. For both men's and ladies' wear, the sewing start position can be moved to the left-hand or right-hand by jump feed before sewing uses.

(Reference)

- Loosen thumbscrew ③ of gauge ② of preset table ①, move to the set place of scale ④ and fix it.
- 2) Afterwards, adjust top end © of cloth to inside © of the pointer and set the cloth to position it. (For the ladies' wear, similarly adjust with the pointer and scale on the left side.)

1-11. Naming the pattern

As many as 14 characters can be inputted in each ACF pattern.

① Display the ACF data input screen.

Only in case of the ACF data input screen (pink), it is possible to input the name of pattern.

2 Call the character input screen.

Press ACF PATTERN NAME setting button

(A) and the character input screen is displayed.

3 Input the character.

Press CHARACTER button (B) you desire to input and the input of character can be performed.

As many as 14 characters of characters (A to Z and 0 to 9) and symbols (+, -, /, #, ., .) can be inputted.

In case of inputting between characters, the inputted character is inserted.

The cursor can travel with CURSOR LEFT TRAVEL button (C) and CURSOR RIGHT TRAVEL button (D). When you desire to delete the inputted character, adjust the cursor to the position of the character you desire to delete and press DELETE button (E).

4 Finish inputting the character.

Press ENTER button (F) and inputting the character is finished. After the finish, the inputted character is displayed on the upper part of the ACF data input screen (pink).

2. OPERATION OF THE SINGLE UNIT OF SEWING MACHINE AND SETTING PROCEDURE (LBH MODE)

- 2-1. LCD display section at the time of independent sewing
- 2-1-1. LBH data input screen

	Button and display	Description
Α	LBH PATTERN NEW	LBH pattern No. new register screen is displayed.
	REGISTER button	→ Refer to <u>2-5. Performing new register of LBH pattern,p.41.</u>
В	LBH PATTERN COPY button	LBH sewing data copy screen is displayed.
		→ Refer to <u>2-11. Copying LBH sewing pattern,p.61.</u>
С	LBH PATTERN DATA	LBH pattern data used in the ACF pattern data being selected at
	AUTOMATIC TURN button (to	present is automatically turned.
	return)	
D	ACF PATTERN No. AND	ACF pattern No. being selected and sewing order are displayed. LBH
	SEWING ORDER display	pattern Nos. which are set in the displayed sewing order are in the state
		of selection.
E	LBH PATTERN DATA	LBH pattern data used in the ACF pattern data being selected at
	AUTOMATIC TURN button (to	present is automatically turned.
	advance)	
F	PRESSER DOWN button	Presser can be lowered and the presser down screen is displayed.
		To raise the presser, press the presser up button displayed in the presser
		down screen.
G	BOBBIN WINDING button	Bobbin thread can be wound.
		 → Refer to 1-6. WINDING BOBBIN THREAD,p.17. LBH pattern No. being selected at present is displayed on the button,
Н	LBH PATTERN SELECION	and when the button is pressed, the LBH pattern No. change screen is
	button	displayed.
		→ Refer to 2-2. Performing LBH pattern No. selection, p.36.
I	NEEDLE THREAD TENSION	Needle thread tension value which is set to LBH pattern data being selected at present is displayed on the button, and when the button is
	SETTING button	pressed, the needle thread tension change screen is displayed.
		→ Refer to <u>2-9. CHANGING NEEDLE THREAD TENSION,p.58.</u>
J	OVEREDGING WIDTH, LEFT	Overedging width, left which is set to LBH pattern data being selected
	SETTING button	at present is displayed on the button, and when the button is pressed,
		the overedging width, left change screen is displayed.

2-2. Performing LBH pattern No. selection

① Display the LBH data input screen.

Only in case of the LBH data input screen (blue), LBH pattern No. selection can be performed. In case of the sewing screen (green), press READY key and in case of the ACF data input screen (pink), press CHANGEOVER OF ACF MODE AND LBH MODE button to display the LBH data input screen.

2 Call the LBH pattern selection screen.

When LBH PATTERN SELECTION button

(A) is pressed, the LBH pattern selection screen is displayed.

3 Select the pattern No.

When UP or DOWN SCROLL button

(B) is pressed, LBH pattern No. buttons (C)
which have been registered are changed over in
order. LBH pattern No. and the contents are
displayed in the button. Here, press the LBH
pattern No. button you desire to select.

4 Determine the pattern No.

Press ENTER button (D), and the LBH pattern No. is determined. Then the selection has been finished.

When you desire to delete the registeredLBH pattern, press DELETE button (E).

2-3. Performing sewing shape selection

① Display the LBH data input screen.

Only in case of the LBH data input screen (blue), the selection of the sewing shape can be performed.

2 Call the sewing shape selection screen.

Press SEWING SHAPE button (A) and the sewing shape selection screen is displayed.

3 Select the 1st bar-tacking section.

Select the shape you desire to sew from among 5 kinds of the 1st bar-tacking shape buttons (B). When it is selected, the total sewing shape in which the selected 1st bar-tacking is used is displayed.

4 Select the sewing shape.

Select SEWING SHAPE button (C) you desire to sew.

5 Finish the sewing shape selection.

Press ENTER button (D) to finish the shape selection and the selected sewing shape is displayed in the LBH data input screen (blue).

Note) The number of sewing shapes to be displayed changes according to the level selected in the sewing shape selection level of memory switch data (level 2) KO4.

→Refer to <u>2-17. CHANGING MEMORY SWITCH</u> <u>DATA,p.78.</u>

2-4. Performing re-sewing under LBH mode

When temporary stop switch (A) or (B) is pressed during sewing under LBH mode, the sewing machine interrupts sewing and stops. At this time, the error screen is displayed to inform that the temporary stop switch is pressed.

2-4-1. To continue performing sewing from some point in sewing

1 Release the error.

Press RESET button (C) to release the error. Then the step motion screen is displayed.

2 Return the presser.

Press ONE STITCH RETURN button (D), and the presser returns stitch by stitch.

Press ONE STITCH FEED button (E), and the presser advances stitch by stitch. Return the presser to the re-sewing position.

3 Start sewing again.

When the SEWING MACHINE START button is pressed, sewing starts again.

For the setting procedure of the start switch, refer to 2-17. CHANGING MEMORY SWITCH DATA, p. 78.

2-4-2. To perform sewing from the start

(1) Release the error.

Press RESET button (B) to release the error, Then the step motion screen is displayed.

② Return the sewing product to the setting position.

Press INITIAL POSITION TRAVEL button, (E) and the presser returns to the sewing product setting position (start position).

Press CANCEL button (I) to close the pop-up and the presser returns to the sewing product setting position (start position).

3 Perform again the sewing work from the start.

When the knee switch or hand switch (switch set to the start switch) is pressed, sewing starts again.

* The existing sewing commands are shown in reverse video in section G. The kinds of commands are 5 kinds below.

🋂 : Sewing command

🗯 : Thread trimming command

: Jump feed

🂆 : Thread tension

: Knife drive

- * The existing number of stitches/ number of total stitches are displayed in section H.
- * Thread tension value is displayed in section I. When thread tension command is inputted in the needle entry point by means of the external input device, the button is displayed and thread tension can be changed.
- X Knife can be cancelled with (K).

2-5. Performing new register of LBH pattern

① Display the LBH data input screen.

Only in case of the LBH data input screen (blue), new register of the LBH pattern can be performed.

2 Call the LBH pattern new register screen.

Press NEW LBH PATTERN REGISTER button (A) and the LBH pattern new register screen is displayed.

3 Input the pattern No.

Input the LBH pattern No. you desire to newly register with the ten keys (B). When the LBH pattern No. which has been already registered is inputted, the sewing shape which has been registered is displayed in the upper part of the screen. Select the LBH pattern No. which is not displayed and has not been registered. New register to the LBH pattern No. which has been already registered is prohibited.

It is possible to retrieve the pattern No. which has not been registered with -/+ buttons \bigcirc (C \cdot D).

4 Determine pattern No.

Press ENTER button (E) to determine the LBH pattern No. to be newly registered and the screen of 1st bar-tacking shape list is displayed.

5 Select the 1st bar-tacking shape.

Select the shape you desire to sew from among 5 kinds of the 1st bar-tacking shape buttons (F). When it is selected, the total sewing shape in which the 1st bar-tacking shape is used is displayed.

6 Select the sewing shape.

Select SEWING SHAPE button (G) you desire to sew.

Tinish the selection of sewing shape.

Press ENTER button (H) to finish the selection of the shape. Then the sewing shape which has been selected is displayed in the LBH data input screen (blue). The initial value of sewing data is inputted according to the selected sewing shape.

Note) Number of sewing shapes to be displayed changes according to the level selected in the sewing shape selection level of memory switch data (level 2).

→ Refer to <u>2-17. CHANGING MEMORY</u> SWITCH DATA,p.78.

2-7. CHANGING SEWING DATA

2-7-1. Changing procedure of sewing data

① Display the LBH data input screen.

Only in case of the LBH data input screen (blue), change of the sewing data can be performed.

2 Select the LBH pattern data.

When LBH PATTERN DATA AUTOMATIC TURN button (A or B) is pressed, LBH pattern Nos. which have been registered to ACF pattern which is selected at present can be changed over in order.

3 Call the sewing data screen.

Press SEWING DATA CHANGE button (C) and the sewing data list screen is displayed.

4 Select the sewing data to be changed.

Press UP/DOWN SCROLL button (D) and select SEWING DATA ITEM button (E) you desire to change. Data item not used according to the shape and data item which is set to without function are not displayed. So, be careful.

→Refer to <u>2-10. SETTING PROCEDURE OF</u>
SEWING DATA WITH/WITHOUT EDIT, p.60.

⑤ Change the data.

For the sewing data, there are the data item to change the numeral and data item to select the pictograph. No. in pink color such as solution is put on the data item to change the numeral and the set value can be changed with the +/-button which is displayed in the change screen. No. in blue color such as solution is put on the data item to select the pictograph and the pictograph which is displayed in the change screen can be selected. For the details of the sewing data.

→refer to 2-7-2. Sewing data list, p.46.

2-7-2. Sewing data list

Sewing data are those that can be inputted to 99 LBH patterns from LBH pattern 1 to 99 and can be inputted to each LBH pattern.

The sewing machine has been set in the state that the data which is necessary to set "With/without edit" cannot be set at the time of your purchase. Change over the function to "With edit" if necessary for use.

→Refer to 2-10. SETTING PROCEDURE OF SEWING DATA WITH/WITHOUT EDIT, p.61.

NO.	Item	Setting range	Edit unit	Remarks
S01	Sewing shape	1 ~ 30	1	
	This item selects the shape from among the sewing			
	shapes of 30 different kinds which the sewing machine			
	has. \rightarrow Refer to \rightarrow 2-6. SEWING SHAPE LIST, p.43.			
	1 ~ 30			
	**Only 12 kinds of standard sewing shapes can be			
	selected at the time of your purchase. When increasing			
	the kinds of shapes, perform setting of KO4 Sewing			
	shape selection level of memory switch data.→ Refer to			
	→ 2-17-2. Memory switch data list,p.78.			
S02	Cloth cut length	3.0 ~ 120.0	0.1mm	
	This item sets the length of cloth that is cut			
	by cloth cutting knife. However, in case of			
	bar-tack shape (Nos. 27, 28, 29 and 30 of SOI),			
	sewing length is set.			
	By making effective U19 Function of plural motions			
	of cloth cutting knife of memory switch data, make the			
	plural motions of knife by the knife size set in the item			
	U18 Cloth cutting knife size, and the sewing product			
	is cut. →Refer to <u>2-17-2. Memory switch data list,p.78.</u>			

(Remarks)

- X 1 : Displayed according to the shape.

2-8. INPUTTING THE PRESSER TYPE

2-8-1 Setting procedure of the presser type

① Display the LBH data input screen.

Only in case of the LBH data input screen (blue), the contents of setting can be changed.

2 Call the presser type selection screen.

Press PRESSER TYPE SELECTION button (A) and the presser type selection screen is displayed.

3 Select the presser type.

Press button (B) of the presser type mounted on the sewing machine. The button pressed is shown in reverse video. Set the presser type referring to Table of presser type described later.

4 Determine the presser type.

Press ENTER button (C) and the presser type change screen is closed. Then the change has been finished.

2-8-2. Table of presser type

Make the number in the frame of engraved part number of presser foot correspond to the type of presser.

	Type	Part No. of presser foot	
1 125×4	Type 1	B151177 <mark>1</mark> 000*	
2 1 35×5	Type 2	B1511772000*	
3	Type 3	B1511773000*	
5∰ ₺	Type 5	_	

- When using type 5 with stitch width of 6 mm or more and 41 mm or more in length, it is necessary to replace components such as presser arm, feed plate, etc.

2-9. CHANGING NEEDLE THREAD TENSION

① Display the LBH data input screen.

Only in case of the LBH data input screen (blue), needle thread tension can be changed.

② Call the needle thread tension change screen.

Press NEEDLE THREAD TENSION button

(A) and the needle thread tension change screen is displayed.

3 Change the needle thread tension.

Needle thread tension at the parallel section and that at the bar-tacking section can be changed in the needle thread tension change screen. Change the tension value with UP button (B) or DOWN button (C) corresponding to the respective sections.

4 Finish the change of needle thread tension.

Press CANCEL button (D) and the needle thread tension change screen is closed. Then the change has been finished.

- * Number of items to be displayed on the needle thread tension change screen according to the sewing data with/without edit.
- -> Refer to 2-10. SETTING PROCEDURE OF SEWING DATA WITH/WITHOUT EDIT, p.60.

※For the tension other than that at parallel section and at bar-tacking section, refer to 2-7.

CHANGING SEWING DATA,p.44. and 2-17. CHANGING MEMORY SWITCH DATA,p78.

Set value of tension at ① parallel section and ② bar-tacking section

	Set value on panel			
		0	Initial	Ф
			value	
Purl stitch	①Parallel	Crest is lowered.	120	Crest is raised.
	section			
	tension			
	②Bar-tacking	Thread tension	3 5	Thread tension
	tension	is decreased.		is increased.
Whip stitch	①Parallel	Thread tension	6 0	Thread tension
	section	is decreased.		is increased.
	tension			
	2Bar-tacking	Thread tension	6 0	Thread tension
	tension	is decreased.		is increased.

In case of the radial eyelet shape, set the bar-tacking tension first to approximately 120 and make the balance of stitches.

Purl stitch and Whip stitch

2-10. SETTING PROCEDURE OF SEWING DATA WITH/WITHOUT EDIT

① Display the sewing data with/without edit setting screen.

When continuing pressing switch for three seconds, the sewing data with/without edit setting button is displayed on the screen. When this button is pressed, the sewing data with/without edit setting screen is displayed.

2 Select the sewing data with/without edit.

The list of data item buttons (B) which are possible to set the data with/without edit among the sewing data is displayed. When the button is pressed, reverse display/normal display changes over alternately. When you desire to set "With edit", set the reverse display. When you desire to set "Without edit", set the normal display.

3 Determine the sewing data with/without edit.

When ENTER button (C) is pressed, the state of with/without edit of the sewing data item which has been set is determined.

2-11. Copying LBH sewing pattern

The sewing data of LBH pattern No. which has been already registered can be copied to LBH pattern No. which has not been registered.

Overwriting copy of the pattern is prohibited. When you desire to overwrite, perform it after erasing the pattern once.

① Display the LBH data input screen.

Only in case of the LBH data input screen (blue), copying is possible. In case of the sewing screen (green), press READY key , and in case of the ACF data input screen (pink), press CHANGEOVER OF ACF MODE AND LBH MODE button to display the LBH data input screen.

2 Call the LBH pattern copy source selection screen.

When LBH PATTERN COPY button (A) is pressed, the LBH pattern copy source selection screen is displayed.

3 Select the pattern No. of copy source.

Select the LBH pattern No. of copy source from LBH PATTERN LIST buttons (B).

Then press COPY DESTINATION INPUT button (C) and the LBH pattern copy destination input screen is displayed.

4 Input the pattern No. of copy destination.

Input LBH pattern No. of copy destination with the ten keys (D). It is possible to retrieve the LBH pattern No. which is not used with \rightarrow buttons (E \cdot F).

⑤ Start copying.

Press ENTER button (G) and copying starts. LBH pattern No. which has been copied in the selected state returns to LBH pattern copy source selection screen after approximately two seconds.

2-12. REGISTERING SEWING DATA TO CUSTOMIZE BUTTON

Register parameters which are frequently used to CUSTOMIZE button and use them. Screen of the change of parameters which have been registered can be displayed by press only CUSTOMIZE button in the LBH data input screen (blue).

2-12-1. How to register

① Display the customize pattern register screen.

When M switch is pressed, the customize pattern register button (A) is displayed on the screen. When this button is pressed, the customize pattern register screen is displayed.

2 Select the button to be registered.

The customize buttons can be registered up to four buttons. Four costomize register buttons (B) are displayed on the screen. When the button located on the position you desire to register is pressed, the sewing data list screen is displayed.

3 Select the sewing data to be registered.

Select the sewing data you desire to register with the sewing data buttons (C). When the selected button is pressed twice, the selection is released.

4 Register to the customize button.

When ENTER button (D) is pressed, register to the customize button is finished and the customize button register screen is displayed. The registered sewing data is displayed on the customize button.

2-12-2. Register state at the time of your purchase

The following sewing data have been registered in order from the left hand at the time of your purchase.

2-13. CHANGING SEWING MODE

① Select the sewing mode.

Press MODE key from the LBH data input screen, and SEWING MODE

SELECTION button (A) is displayed.

LBH Press this button and changeover of independent sewing and continuous stitching can be performed.

Continuous stitching button (D):

2 Determine the sewing mode.

Press MODE key M after changing over the sewing mode. LBH data input screen of the selected sewing mode is displayed.

2-14. LCD DISPLAY SECTION AT THE TIME OF CONTINUOUS STITCHING

M	COUNTER VALUE CHANGE	Existing counter value is displayed on this button. When the button is
	button	pressed, the counter value change screen is displayed. \rightarrow Refer to 1-7. Using
		counter,p.18.
N	COUNTER CHANGE OVER	Display of sewing counter/No. of pcs. counter can be changed over. \rightarrow Refer
	button	to 1-7. Using counter,p.18.
О	OVEREDGING WIDTH, LEFT	Overedging width, left which is set to the LBH pattern data during sewing
	display	is displayed
P	KNIFE GROOVE WIDTH,	Knife groove width, left which is set to the LBH pattern data during sewing
	LEFT display	is displayed.

	Button and display	Description
Q	LBH PATTERN DATA	LBH pattern data which are used in ACF pattern data being sewn at
	AUTOMATIC TURN button (to	present are automatically turned.
	advance)	
R	CHANGEOVER OF ACF	When the button is pressed, the ACF automatic sewing screen is displayed
	MODE AND LBH MODE	and automatic sewing can be performed.
	button	
S	PATTERN NO. display	LBH pattern No. inputted to LBH continuous stitching data during sewing
		is displayed. LBH pattern No. being sewn at present is displayed in reverse
		video.
Т	SPEED variable resistor	Number of rotation of sewing machine can be changed. The number of
		rotation which is set is displayed.
U	CLOTH CUTTING LENGTH	Cloth cutting length which is set to the LBH pattern data during sewing is
	display	displayed.
V	KNIFE GROOVE WIDTH,	Knife groove width, right which is set to the LBH pattern data during
	RIGHT display	sewing is displayed.

2-15. Performing LBH continuous stitching

Change the sewing mode to the continuous stitching mode before performing setting.

-> Refer to 2-13. CHANGING SEWING MODE, p.65.

2-15-1. Selection of LBH continuous stitching data

① Display the LBH continuous stitching data input

Only in case of the LBH continuous stitching data input screen (light blue), it is possible to select LBH continuous stitching data No. In case of the sewing screen (green), press READY key and display the LBH continuous stitching data input screen (light blue).

When LBH CONTINUOUS STITCHING DATA NO. SELECTION button (A) is pressed, the LBH continuous stitching data No. selection screen is displayed. LBH continuous stitching data No. selected at present and the contents are displayed in the upper part of the screen, and other LBH continuous stitching data No. buttons which have been registered are displayed in the lower part of the screen.

3 Select the LBH continuous stitching data No.

When UP or DOWN SCROLL button (B) is pressed, the registered LBH continuous stitching data No. buttons changes over in order. Contents registered to the LBH continuous stitching data are displayed in the buttons. Here, press the LBH continuous stitching data button (C) you desire to select.

4 Determine the LBH continuous stitching data No.

When ENTER button (D) is pressed, the LBH continuous stitching data No. selection screen is closed and the selection has been finished.

2-15-2. Editing procedure of the LBH continuous stitching data

① Display the LBH continuous stitching data input screen.

Only in case of the LBH continuous stitching input screen (light blue), it is possible to change the continuous stitching data. In case of the sewing screen (green), press READY key and display the LBH continuous stitching data input screen (light blue).

After the screen is displayed, select the LBH continuous stitching data No. you desire to edit referring to 2-15-1. Selection of LBH continuous stitching data,p.71.

LBH continuous stitching data No. 1 only has been registered at the time of your purchase. However, LBH pattern No. has not been inputted and the screen is displayed as shown in the figure on the right side.

② Display the feed amount input screen.

When FEED AMOUNT button (A) is pressed, the feed amount input screen is displayed.

3 Input the feed amount.

Input the feed amount with plus/minus buttons
(B). Input range changes according to the presser size which has been set.

4 Determine the feed amount.

When ENTER button (C) is pressed, the feed amount input screen is closed and input has been completed.

5 Call the LBH pattern No. selection screen.

Press button (D) displayed under the sewing order display. LBH pattern No. to sew first screen is displayed.

6 Select the LBH pattern No.

When UP or DOWN SCROLL button (E) is pressed, the registered LBH pattern No. buttons (F) change over in order. Contents of sewing data are displayed in the buttons. Here, press the LBH pattern No. button you desire to select.

① Determine the LBH pattern No.

When ENTER button (G) is pressed, the LBH continuous stitcing data No. selection screen is closed and the selection has been finished.

8 Edit the sewing data of LBH pattern inputted to LBH continuous stitching data.

When the LBH pattern No. is selected, SEWING

DATA button (H) displayed the contents of the sewing data inputted to the selected LBH pattern No. is displayed. When the button is pressed, the sewing data input screen is displayed.

Select the sewing data to be changed.

Press UP/DOWN SCROOLI button (I) and select the data item button (J) you desire to change. Data items which are not used according to the shapes and those which have been set to "Without function" are not displayed. So, be careful.

① Change the data.

There are data items to change numerals and those to select pictographs in the sewing data. No. in pink color such as solvent is put on the data items to change numerals and the set value can be changed with +/- button displayed in the change screen. No. in blue color such as solvent is put on the data items to select pictographs and the pictographs displayed in the change screen can be selected. For the details of the sewing data, refer to 2-7-2. Sewing data list.p.46.

Repeat steps ② through ⑩ and edit the data.

※ Now, input has been completed. However, for the continuous stitching, enter all data within the range of the presser size. When the data is outside the range, error is displayed. Be sure to correctly input the presser size. →Refer to 2-8. INPUTTING THE PRESSER TYPE,p.56.

2-16. EXPLANATION OF PLURAL MOTIONS OF KNIFE

This sewing machine can automatically actuate the knife plural times and sew a buttonhole larger than the size of knife by setting the size of knife attached from the operation panel. Set and use this function when sewing various sewing shapes without replacing the knife.

① Display the memory switch list screen.

When MODE key M is pressed, MEMORY

SWITCH button (A) is displayed on the screen.

When this button is pressed, the memory switch list screen is displayed.

② Select U18 Cloth cutting knife size button.

Press UP/DOWN SCROOL button (B) and

select U18 Cloth cutting knife size button (C).

The cloth cutting knife size input screen is displayed.

3 Input the cloth cutting knife size.

Press plus/minus buttons (D) and input the size of knife attached.

4 Determine the cloth cutting knife size.

When ENTER button (E) is pressed, the cloth cutting knife size input screen is closed and the input has been completed. Then the screen returns to the memory switch list screen.

(5) Select U19 Function of plural motions of cloth cutting knife button.

Press UP/DOWN SCROOL button and select U19
Function of plural motions of cloth cutting

knife button (F). The function of plural

motions of cloth cutting knife selection screen is displayed.

6 Make effective the function of plural motions of cloth cutting knife.

Select the effective button (G).

② Determine the function of plural motions of cloth cutting knife.

When ENTER button (H) is pressed, the function of plural motions of cloth cutting knife screen is closed and the selection of the function of plural motions of cloth cutting knife has been completed.

Then the screen returns to the memory switch list screen.

8 Perform sewing.

When READY switch (I) is pressed, the sewing screen (green) is displayed. At this time, when Cloth cut length is set to larger than Cloth cutting knife size which has been set in step 3, the sewing machine automatically actuates plural motions of knife and performs sewing.

When you desire to sew the hole shape smaller than the size of knife attached, error 489 appears.

2-17. CHANGING MEMORY SWITCH DATA

2-17-1. Changing procedure of memory switch data

① Display the memory switch data list screen.

When MODE key M is pressed, MEMORY SWITCH button (A) is displayed on the screen.

② Select the memory switch button you desire to change.

Press UP/DOWN SCROOL button (B) and select the data item button (C) you desire to change.

3 Change the memory switch data.

There are data items to change numerals and those to select pictographs in the memory switch data. No. in pink color such as to change numerals and the set value can be changed with buttons displayed in the change screen. No. in blue color such as to select pictographs and the pictographs displayed in the change screen can be selected.

→For the details of memory switch data, refer to <u>2-17-2. Memory</u> switch data list,p.80.

2-17-2. Memory switch data list

① Level 1

Memory switch data (level 1) are the motion data that the sewing machine has in common and the data that operate on all sewing patterns in common.

NO.	Item		Setting range	Edit unit	Initial display
U01	Presser lifter maximum position Height of maximum position of pedal operation is set.	MAX T	0~14.0	0.1mm	14.0mm
U02	Presser lifter intermediate position Height of intermediate position of pedal operation is set.	<u>↓</u> ‡	0~14.0	0.1mm	6.0mm
U03	Presser lifter cloth setting position Height of cloth setting position of pedal operation is set.	<u></u>	0~14.0	0.1mm	0.0mm
U06	Needle thread tension at sewing end setting		0~200	1	50
U07	Needle thread tension at thread trimming		0~200	1	35
U08	Needle thread tension of basting for sewing together setting	₹ 🚳	0~200	1	60

NO.	Item		Setting range	Edit unit	Initial display

K22	Presser lifter speed selection As set value is increased, presser lifting speed becomes faster.		1 ~ 3	1	1

3. OTHER FUNCTIONS

3-1. USING COMMUNICATION FUNCTION

Communication function can download the sewing data created with other sewing machine, creation of sewing data and sewing data created by editing device PM-1 to the sewing machine. In addition, the function can upload the aforementioned data to the smart media or personal computer.

Smart media and RS232C port are prepared as the vehicle to communicate.

**However, SU-1 (data server utility) is necessary to perform download/upload from the personal computer.

3-1-1. Handling possible data

Handling possible sewing data are two kinds below. The respective data formats are as described below.

Data name		Extension	Description of data	
			Data of the needle entry point created	
Vector format	NΩ	VD00 XXX. VDT	with PM-1	
data	νĎΤ		Format of the data which can be used in	
	7		common among JUKI sewing machines.	
			Format of the data of sewing proper to	
Damamatan data	r data	LBH00 XXX. EPD	LBH such as sewing shape, cloth cutting	
Parameter data	ΕΡ̈́D	LBH00 AAA. EPD	length, overedging width, etc. created	
			with the sewing machine	

XXX: file NO.

In case of saving the data in the smart media, save the data in the state of directory structure below. When the data are not saved in the correct folder, reading of file cannot be performed.

* There is beforehand the PROG folder in the Smart media purchased from our company. Do not delete it.

3-1-2 Performing communication by using the smart media

[Setting procedure]

hen the upper side cover located on the side of the operation panel is opened, there is the inserting opening for smart media card. Put the contact part of the card to the front side and insert it into the opening

① The smart media card stops once in the protruding state by approximately 10 mm while inserting the card. Further, apply force to insert the card and ease up the force when it is reached to the end. Setting is completed when the card has returned by approximately 1 mm.

② After completion of setting of the card, close the smart media cover. By closing the cover, it is possible to perform communication.

If the smart media card and the cover come in contact with each other and the cover is not closed, check the following matters.

- Check that the inserting is stopped in the state that the card protrudes by approximately 10 mm.
- · Check that the contact part of the card is put downward and inserted.
- · Check that the smart media card other than 3.3V voltage type is used.

[Removing procedure]

- ① Open the smart media cover, push the card until it goes no further, and ease up force when it goes to the end. The card returns by approximately 10 mm in the reverse order of the time of setting.
- 2 Then draw out the card to complete removing.

[Performing format]

In case of re-formating the smart media, be sure to perform it with IP200. The smart media formated with the personal computer cannot be read with IP200.

① Display the smart media format screen.

When MODE key M is held pressed for three seconds, SMART MEDIA FORMAT button

(A) is displayed on the screen. When this button is pressed, the smart media format screen is displayed.

2 Start formating of the smart media

Set the smart media you desire to format to the smart media slot, close the cover, press button (B) and formating starts.

Save necessary data in the smart media to the other vehicle before formating. When formating is performed, the inside data are deleted.

[Prohibition items in handling the smart media]

- ① Smart media is a precision electronic instrument. Do not bend it or apply shock to it.
- 2 It is recommended to periodically save the data saved in the smart media to the other vehicle to prepare for accidents.
- 3 When initializing the data, perform it after checking that necessary data do not exist in the card.
- Avoid using or storing the smart media in a place of high temperature and high humidity.
- ⑤ Avoid using the smart media near exothermic and combustible articles.
- 6 If the contact part of the card becomes dirty, failure of contact will be caused. Do not touch by hand, and control so that dust, oil, or other foreign material does not adhere to it. In addition, the inside element is damaged by static electricity or the like. So, be very careful when handling.
- The smart media has a span of life. Writing and deletion cannot be performed after an extended period of use. In this case, replace it with a new one.

3-1-3. Performing communication by using RS232C

[Setting procedure]

It is possible to send and receive the data, by using RS232C cable, with the personal computer or the like. For the cable to be connected, connect reverse type 9-pin (female) to the operation panel side.

Caution: If the contact part becomes dirty, failure of contact will be caused. Do not touch by hand, and control so that dust, oil or other foreign material does not adhere to it. In addition, the inside element is damaged by static electricity or the like. So, be very careful when handling.

(Setting procedure)

When the lower part of the cover located on the side of the operation panel is opened, there is the connector of 9-pin for RS-232C. Connect the cable there. When the screw for locking is attached to the connector, tighten the screw to prevent it from falling.

3-1-4. Take-in of the data

1 Display the communication screen

When communication switch (A) of switch seat section is pressed in the data input screen, the communication screen is displayed.

2 Select the kind of data.

When data selection button (B) is pressed, the data selection screen is displayed. Select button (C) of kind of data to be communicated. The selected button is displayed in reverse video.

3 Determine the kind of data.

When ENTER button (D) is pressed, the kind of data selection screen is closed and the selection of the kind of data has been completed.

4 Select the communication procedure.

There are four communication procedures as described below.

- (E)Writing data from smart media to panel(F)Writing data from personal computer(server) to panel
- (G)Writing data from panel to smart media (H)Writing data from panel to personal

Select the button of communication procedure you desire.

5 Select the data No.

computer (server)

When (I) is pressed, the writing file selection screen is displayed.

Input the file No. of the data you desire to write. For the file No., input the numerals of the part xxx of VD00xxx of the file name.

Designation of the pattern No. of writing destination can be performed in the same way. When the writing destination is the panel, pattern Nos. which have not been registered are displayed.

Designation of the LBH pattern No. of writing destination can be performed in the same way. When the writing destination is the panel, LBH pattern Nos. which have not been registered are displayed.

6 Determine the data No

When ENTER button (K) is pressed, the data No. selection screen is closed and the selection of the data No. has been completed.

7 Start communication.

When communication button (L) is pressed, the data communication starts. The communication screen is displayed during communication and the screen returns to the communication screen after the end of communication.

* Do not open the cover during reading the data.
Data may not be read in.

3-2. INFORMATION FUNCTION

There are three functions below in the information function.

- 1) Oil replacement time, needle replacement time, cleaning time, etc. are designated and the warning notice is performed when the designated time has passed.
 - → Refer to <u>3-2-1</u>. <u>Observing the maintenance and inspection information, p.97</u>. and <u>3-2-2</u>. <u>Inputting the inspection time, p.99</u>.
- 2) Speed can be checked at a glance and the target achieving consciousness as a line or group is increased as well by the function to display the target output and the actual output.
 - → Refer to <u>3-2-4</u>. <u>Observing the production control information, p.102</u>. and <u>3-2-5</u>. <u>Performing setting of the production control information, p.105</u>.
- 3) Information on machine working ratio, pitch time, machine time and machine speed can be displayed from the working state of the sewing machine.
 - → Refer to <u>3-2-6. Observing the working measurement information, p.108.</u>

In addition, information on plural sewing machines can be controlled by the server when this function is used by connecting SU-1 (sewing machine data server utility) with the sewing machines.

3-2-1. Observing the maintenance and inspection information

① Display the information screen.

When information key (A) of the switch seat section is pressed in the data input screen, the information screen is displayed.

② Display the maintenance and inspection information screen.

Press maintenance and inspection informationscreen display button (B) in the information screen.

Information on the following three items is displayed in the maintenance and inspection information screen.

- Needle replacement (1,000 stitches) : VIII VIII
- · Cleaning time (hour) :
- Oil replacement time (hour) :

The interval to inform of the inspection for each item in button (C) is displayed at (D), and remaining time up to the replacement is displayed at (E). In addition, remaining time up to the replacement can be cleared.

3 Perform clearing remaining time up to the replacement.

When button (C) of the item you desire to clear is pressed, the time of replacement clear screen is displayed. When ENTER button (G) is pressed, the remaining time up to the replacement is cleared.

4 Display the threading diagram.

When threading button (F) displayed in the maintenance and inspection screen is pressed, the needle thread threading diagram is displayed. Observe it when performing threading.

3-2-2. Inputting the inspection time

① Display the information screen (maintenance personnel level).

When information key (A) of the switch seat section is pressed in the data input screen for approximately three seconds, information screen (maintenance level) is displayed. In case of the maintenance personnel level, the pictograph located on the upper left side changes from blue to orange, and five buttons are displayed.

② Display the maintenance and inspection information screen.

Press maintenance and inspection information screen display button [%] (B) in the information screen.

*For the details of ERROR RECORD SCREEN

DISPLAY button (C), refer to <u>5-5-1</u>. <u>Display of</u>

error record, p. 139.

For the details of CUMULATIVE WORKING

INFORMATION SCREEN DISPLAY button

refer to <u>5-5-2</u>. <u>Display of the cumulative working information, p.141</u>.

The same information as that in the normal maintenance and inspection information screen is displayed in the maintenance and inspection information screen.

When button (E) of the item you desire to change the inspection time is pressed, the inspection time input screen is displayed.

3 Input the inspection time.

Input the inspection time.

When the inspection time is set to "0", the warning function stops.

When clear button (F) is pressed, the value returns to the initial value. The initial values of the inspection time of respective items are as follows.

• Needle replacement : 0 (1,000 stitches)

• Cleaning time: 0 (hour)

· Oil replacement time : 200 (hour)

When ENTER (G) button is pressed, the inputted value is determined.

3-2-3. Releasing procedure of the warning

When the designated inspection time is reached, the warning screen is displayed. In case of clearing the inspection time, press CLEAR button (A). The inspection time is cleared and the pop-up is closed. In case of not clearing the inspection time, press CANCEL button (B) and close the pop-up. Every time one sewing is completed, the warning screen is displayed until the inspection time is cleared.

Warning Nos. of the respective items are as follows.

• Needle replacement : A001

• Cleaning time : A002

• Oil replacement time : A003

3-2-4. Observing the production control information

It is possible to designate the start, display the number of pieces of production from the start to the existing time, display the number of pieces of production target, etc. in the production control screen. There are two kinds of display ways for the production control screen.

3-2-4-1. When displaying from the information screen

① Display the information screen

When information key i (A) of the switch seat section is pressed in the data input screen, the information screen is displayed.

2 Display the production control screen.

Press production control screen display button

production control screen is displayed.

Information on the following 5 items is displayed in the production control screen.

A: Existing target value

Number of pieces of the target of products at the present time is automatically displayed.

B: Actual results value

Number of pieces of the sewn products is automatically displayed.

C: Final target value

Number of pieces of the final target of products is displayed.

Input the number of pieces referring to <u>3-2-5</u>.

Performing setting of the production control

information,p.105.

D: Pitch time

Time (second) required for one process is displayed.

Input the time (unit : second) referring to <u>3-2-5. Performing setting of the production control information, p.105.</u>

E: Number of times of thread trimming

Number of times of thread trimming per process is displayed.

Input the number of times referring to <u>3-2-5</u>. <u>Performing setting of the production control information, p.105</u>.

3-2-4-2. When displaying from the sewing screen

① Display the sewing screen.

When READY key (A) of the switch seat section is pressed in the ACF data input screen, the automatic sewing screen is displayed.

2 Display the production control screen.

When information key (B) of the switch seat section is pressed in the sewing screen, the production control screen is displayed.

The contents of display and the functions are common to <u>3-2-4-1</u>. When displaying from the information screen,p.102.

3-2-5. Performing setting of the production control information

① Display the production control screen.

Display the production control screen referring to <u>3-2-4</u>. <u>Observing the production control</u> <u>information,p.102</u>.

2 Input the final target value.

First, input the number of pieces of the target of production in the process to which sewing is performed from now on. When final target

value button (C) is pressed, the final

target value input screen is displayed.

Input the value you desire with ten keys or UP/DOWN buttons.

After the input, press ENTER button (F).

3 Input the pitch time.

Next, input the pitch time required for one process. When pitch time button (D) in the previous page is pressed, the pitch time input screen is displayed.

Input the value you desire with ten keys or -/+ buttons.

After the input, press ENTER button (F).

4 Input the number of times of thread trimming.

Next, input the number of times of thread trimming per process. When number of times of thread trimming button

(E) in the previous page is pressed, the number of times of thread trimming input screen is displayed. Input the value you desire with ten keys or -/+ buttons. After the input, press ENTER button (F).

- * When the input value is "0", count of the number of times of thread trimming is not performed. Use this function by connecting the external switch.
- ⑤ Start the count of number of pieces of production.

 When START button (G) is pressed, the count of number of pieces of production is started.

6 Stop the count.

Display the production control screen referring to <u>3-2-4.</u>

<u>Observing the production control information, p.102.</u>

When the count is being performed, STOP button (H) is displayed. When STOP button (H) is pressed, the count is stopped.

After the stop, START button is displayed at the position of STOP button. When continuing the count, press START button again. The counted value is not cleared until CLEAR button is pressed.

7 Clear the counted value.

When clearing the counted value, set the count to the stop state and press CLEAR button [C] (I). The value to be cleared is the present target value (J) and actual results value (K) only.

(Note: CLEAR button is displayed only in case of stop state.)

When CLEAR button (I) is pressed, the clear confirmation screen is displayed.

When CLEAR button C (L) is pressed in the clear confirmation screen. the counted value is cleared.

3-2-6. Observing the working measurement information

① Display the information screen.

When INFORMATION key i (A) of the switch seat section in the ACF data input screen is pressed, the information screen is displayed.

2 Display the working measurement screen.

Press working measurement screen display button in the information screen. The working measurement screen is displayed.

Information on the following 5 items are displayed in the working measurement screen.

- A: The information is automatically displayed from the time of start of measuring the working ratio.
- B: The information is automatically displayed from the time of start of measuring the machine speed.
- C: The information is automatically displayed from the time of start of measuring the pitch time.
- D: The information is automatically displayed from the time of start of measuring the machine time.
- E: Number of times of thread trimming is displayed.Input the number of times referring to the next3.

3 Input the number of times of thread trimming.

Next, input the number of times of thread trimming per process. When number of times of thread trimming button

(E) in the previous page is pressed, the number of

times of thread trimming input screen is displayed. Input the value you desire with ten keys or -/+ buttons. After the input, press ENTER button (F).

When the input value is 0, count of the number of times of thread trimming is not performed. Use this function by connecting the external switch.

4 Start the measurement.

When START button (G) is pressed, measurement of each data is started.

Stop the count

Display the working measurement screen referring to ① and ② of 3-2-6. Observing the working measurement information,p108. STOP switch ② (H) is displayed when the measurement is being performed. When STOP switch ③ (H) is pressed, the measurement is stopped. After the stop, START button ③ is displayed at the position of STOP button. To continue measuring, press START button again. The measured value is not cleared until CLEAR button ⑤ is pressed.

6 Clear the counted value.

When clearing the counted value, set the count to the stop state and press CLEAR button [C] (I). (Note: CLEAR button is displayed in case of the stop state only.)

When CLEAR button [C] (I) is pressed, the clear confirmation screen is displayed.

When CLEAR button C (J) is pressed in the clear confirmation screen, the counted value is cleared.

3-3. TRIAL SEWING FUNCTION

Data created with PM-1 (sewing data creation and edit software) can be sewn on trial by on-line connection of the personal computer with the sewing machine.

Connect the personal computer with IP200 and transmit data to the sewing machine after creation of data with PM-1. When IP200 becomes the data input screen, automatically the trial sewing screen is displayed. For the operating procedure of PM-1, see HELP of PM-1 or the like.

3-3-1. Performing trial sewing

Performing trial sewing

When the trial sewing data (vector format data) is transmitted from PM-1, the screen on the right side is displayed, and the needle entry diagram of the transmitted data is displayed in the center of the screen.

The display color of the needle entry diagram is different according to the thread tension value. When the number of stitches of the transmitted data is excessive, the needle entry diagram is not displayed.

2 Edit the vector parameter.

Sewing can be performed by adding the vector parameter which can be set by the sewing machine to the vector format data transmitted from PM-1. When sewing data setting button (A) is pressed, the vector parameter edit screen is displayed. When setting is not performed, the vector parameter becomes the initial value.

3 Select the vector parameter to be changed.

Press UP/DOWN scroll button and select the parameter item you desire to change.

4 Change the data.

There are data item to change numerals and that to select pictographs in the sewing data. NO. in pink color such as solvent is put on the data item to change numerals and the set value can be changed with buttons displayed in the change screen. NO. in blue color such as select pictographs and the pictographs displayed in the change screen can be selected. For the details of sewing data, refer to 3-3-2. Vector parameter list,p.114.

⑤ Perform trial sewing

When READY switch is pressed, the trial sewing screen is displayed.

Trial sewing can be performed in this state.

6 Register the data to the pattern.

When the data which has been sewn on trial is registered to the panel, press REGISTER button
(B) displayed in the trial sewing screen, and the register screen is displayed. Input the pattern No. you desire to register with ten keys (E). Input the LBH pattern No. you desire to register with ten keys (E).

Determine the register of the data.

When ENTER button (F) is pressed, the register screen is closed and the register has been completed.

8 Display the data input screen.

After completion of the register, automatically the data input screen is displayed.

3-3-2. Vector parameter list

NO.	Item		Setting range	Edit unit	Initial display
S03	Knife groove width, right		-2.00~2.00	0.05mm	0
S04	Knife groove width, left	*	-2.00~2.00	0.05mm	0
S81	With/without knife		0~1		0
S84	Max. speed limitation		400~4200	100rpm	
S91	1st clearance compensation	*	-9 ~ 9	1 stitch	0
S92	2nd clearance compensation	<u>*</u>	-9~9	1 stitch	0
S93	Increase/decrease ratio (X direction)	8	20~200	1%	100
S94	Increase/decrease ratio (Y direction)		20~200	1%	100
S95	ACTIVE tension reference value	6	0~200	1	0

3-3-3. Thread tension value display color list

Needle entry diagram to be displayed is different according to the thread tension value which is set to the needle entry point. The color displayed according to the thread tension is as described below.

Thread tension value	Display color
0 to 20	: Gray
21 to 40	: Purple
41 to 60	: Blue
61 to 80	: Light blue
81 to 100	: Green
101 to 120	: Yellow green
121 to 140	: Orange
141 to 160	: Red
161 to 180	: Pink
181 to 200	: Black

4. ERROR CODE LIST

Error code		Description of error	How to recover	Place of recovery
E 0 0 1	──── < <mark>€</mark> •	Contact of initialization of EEP-ROM of MAIN CONTROL p.c.b. When data is not written in EEP-ROM or data is broken, data is automatically initialized and the initialization is informed.	Turn OFF the power.	recovery
E 0 0 7		Main shaft motor-lock When large needle resistance sewing product is sewn	Turn OFF the power.	
E 0 1 1		External media not inserted External media is not inserted.	Possible to re-enter after reset.	
E 0 1 2		Read error Data read from external media cannot be performed.	Possible to re-start after reset.	Previous screen
E013		Write error Data write from external media cannot be performed.	Possible to re-start after reset.	Previous screen
E 0 1 4		Write protect External media is in the write prohibition state	Possible to re-start after reset.	Previous screen
E 0 1 5	■	Format error Format cannot be performed.	Possible to re-start after reset.	Previous screen
E 0 1 6		External media capacity over Capacity of external media is short.	Possible to re-start after reset.	Previous screen

Error code		Description of error	How to recover	Place of recovery
E 0 1 7		EEP-ROM capacity over Capacity of EEP-ROM is short.	Possible to re-start after reset.	Previous screen
E 0 1 8	TYPE	Type of EEP-ROM is different. When the mounted EEP-ROM is different in type.		Previous screen
E 0 1 9		File size over File is too large.	Possible to re-start after reset.	Previous screen
E 0 2 2	No.	File No. error Designated file is not in server or smart media.	Possible to re-start after reset.	Previous screen
E 0 2 3	<u>-</u>	Detection of step-out of presser lifting motor When step-out of motor is detected at the time when presser lifting motor passes origin sensor or starts operation.	Possible to re-start after reset.	Data input screen
E 0 2 4	NÒ VĎT	Pattern data size over When sewing cannot be performed since total size of continuous stitching data or size of downloaded data is too large.	Possible to re-start after reset.	Data input screen
E 0 2 5	* 4	Detection of step-out of needle thread trimmer motor When step-out of motor is detected at the time when needle thread trimmer motor passes origin sensor or starts operation.	Possible to re-start after reset.	Data input screen
E 0 2 6	**************************************	Detection of step-out of bobbin thread trimmer motor When step-out of motor is detected at the time when bobbin thread trimmer motor passes origin sensor or starts operation.	Possible to re-start after reset.	Data input screen

Error code		Description of error	How to recover	Place of recovery
E 0 2 7		Read error Data read from server cannot be performed.	Possible to re-start after reset.	Previous screen
E 0 2 8		Write error Data write from server cannot be performed.	Possible to re-start after reset.	Previous screen
E029		Lid of smart media slot is open.	Possible to re-start after reset.	Previous screen
E030		Needle bar upper position failure When needle does not stop at UP position even with needle UP operation at the time of starting sewing machine.	Possible to re-start after reset.	Data input screen
E 0 4 2	No.	Operation error peration of sewing data cannot be performed.	Possible to re-start after reset.	Data input screen
E 0 4 3	<u> </u>	Enlarging error Sewing pitch exceeds 5 mm.	Possible to re-start after reset.	Data input screen
E 0 5 0		Pause switch When stop switch is pressed during machine running.	Possible to re-start after reset.	Step screen
E 0 5 2	₩.	Thread breakage detection error When thread breakage has occurred during machine running.	Possible to re-start after reset.	Step screen

Error code		Description of error	How to	Place of recovery
E061	-W	Memory switch data error When memory switch data is broken or revision is old.	Turn OFF the power.	Tocovery
E062	No.	Sewing data error When sewing data is broken or revision is old.	Turn OFF the power.	
E089		When sewing products are stacked and passing. Remove sewing products.	Possible to re-start after reset.	automatic sewing screen
E099	14 >8	Interference of knife lowering command with thread trimming motion When inserting position of knife command is improper and knife command interferes with thread trimming motion in case of motion from external data.	Possible to re-start after reset.	Data input screen
E302		Confirmation of tilt of machine head When tilt of machine head sensor is OFF.	Possible to re-start after reset.	Data input screen
E303		Main shaft semilunar plate sensor error Semilunar plate of sewing machine motor is abnormal.	Turn OFF the power.	
E 3 0 4	1.4	Cloth cutting knife sensor error When knife is held lowered or sensor is not OFF when knife is lowered.	Turn OFF the power.	
E 4 0 1	No.>>	Copy disapproval error When trying to perform copying to the pattern No. which has been registered. In case of continuou s stitching Copy disapproval error Stitching Copy disapproval error Stitching Copy disapproval error When trying to perform copying to the pattern No. In case of cycle stitching	Possible to re-start after pressing cancel button.	Pattern list screen
E 4 0 2		Pattern deletion error When trying to perform deletion in case the remaining pattern No. which has been registered is only one. In case of continuou stitching : In case of cycle stitching	Possible to re-start after pressing cancel button.	Pattern list screen

Error code		Description of error	How to	Place of
Entor code		•	recover	recovery
E410	803 No.	When sewing counter set value is smaller than the number of times of sewing of the sewing pattern which is selected at present.	Possible to re-start after reset.	ACF data input screen
E478		Carriage movable range over error, left Feed amount of sewing pattern is over the movable range of carriage (left side). set the jump feed amount and sewing length so that the left traveling amount of carriage is within 25 mm.	Possible to re-start after reset.	ACF data input screen
E479		Carriage movable range over error (right) Feed amount of sewing pattern is over the movable range of carriage (right side). Set the jump feed amount and sewing length so that the right traveling amount of carriage is within 610 mm.	Possible to re-start after reset.	ACF data input screen
E486	### ### ### ### ### ### ### ### ### ##	Eyelet knife length error When the shape is not formed since the eyelet knife length is too short in case of eyelet shape.	Possible to re-start after reset.	Sewing data input screen \$17
E487		Eyelet shape length error Eyelet shape length is too short to form the shape in case of eyelet shape.	Possible to re-start after reset.	Sewing data input screen S14
E488	***	Flow bar-tacking compensation error When bar-tacking length is too short to form the shape in case of flow bar-tacking shape.	Possible to re-start after reset.	Sewing data input screen S08
E489	‡	Knife size error (at the time of plural motions of knife) When knife size is larger than cloth cutting knife size.	Possible to re-start after reset.	Sewing data input screen S02
E492	→	Presser size over of basting When stitching data of basting exceeds presser size.	Possible to re-start after reset.	Sewing data input screen S40
E493		Presser size over of tie stitching at sewing end When stitching data of tie stitching at sewing end exceeds presser size.	Possible to re-start after reset.	Sewing data input screen S67

Error code		Description of error	How to recover	Place of recovery
E 4 9 4		Presser size over of tie stitching at sewing start When stitching data of tie stitching at sewing start exceeds presser size.	Possible to re-start after reset.	Sewing data input screen S64
E495	Į.	Presser size error (Width direction: right only) When stitching data exceeds the size of right only of width direction of presser.	Possible to re-start after reset.	Sewing data input screen S03
E496	Ų Į	Presser size error (Width direction: left only) When stitching data exceeds the size of left only of width direction of presser.	Possible to re-start after reset.	Sewing data input screen
E497		Presser size error (Length direction: front) When stitching data exceeds the size of front of length direction of presser.	Possible to re-start after reset.	Sewing data input screen
E498	Á	Presser size error (Width direction: right and left) When stitching data exceeds the size of both right and left of width direction of presser.	Possible to re-start after reset.	Sewing data input screen S05
E499		Presser size error (Length direction: rear) When stitching data exceeds the size of rear of length direction of presser.	Possible to re-start after reset.	Sewing data input screen S02

E704	R−V−L	Nonagreement of system version When version of system software is improper in case of initial communication.	Turn OFF the power.	Communication screen

Error code	Description of error	How to	Place of recovery
E730	Main shaft motor encoder defectiveness or phase-out When encoder of sewing machine motor is abnormal.	Turn OFF the power.	recovery
E731	Main motor hole sensor defectiveness or position sensor defectiveness When hole sensor or position sensor of sewing machine is defective.	Turn OFF the power.	
E733	Reverse rotation of main shaft motor When sewing machine motor rotates in reverse direction.	Turn OFF the power.	
E 8 0 1	Phase-lack of power When phase-lack of input power occurs.	Turn OFF the power.	
E802	Power instantaneous cut detection When input power is instantaneously OFF.	Turn OFF the power.	
E811	Overvoltage When input voltage is 280V or more.	Turn OFF the power.	
E813	Low voltage When input voltage is 150v or less.	Turn OFF the power.	
E901	Abnormality of main shaft motor IPM When IPM of servo control p.c.b. is abnormal.	Turn OFF the power.	

Error code		Description of error	How to recover	Place of recovery
E902		Overcurrent of main shaft motor When current flows excessively to sewing machine motor.	Turn OFF the power.	
E903		Abnormality of stepping motor power When stepping motor power of servo control p.c.b. fluctuates ±15% or more.	Turn OFF the power.	
E 9 0 4		Abnormality of solenoid power When solenoid power of servo control p.c.b. fluctuates $\pm 15\%$ or more.	Turn OFF the power.	
E905		Abnormality of temperature of heat sink for servo control p.c.b. When temperature of heat sink of servo control p.c.b. is 85 ° C or more.	Turn OFF the power.	
E907	心中	Zigzag width motor origin retrieval error When origin sensor signal is not inputted at the time of origin retrieval motion.	Turn OFF the power.	
E908	[]‡ 	Y-feed motor origin retrieval error When origin sensor signal is not inputted at the time of origin retrieval motion.	Turn OFF the power.	
E909	* 🖶	Needle thread trimmer motor origin retrieval error When origin sensor signal is not inputted at the time of origin retrieval motion.	Turn OFF the power.	
E910	<u></u>	Presser motor origin retrieval error When origin sensor signal is not inputted at the time of origin retrieval motion.	Turn OFF the power.	

Error code		Description of error	How to recover	Place of recovery
E911	*	Bobbin thread trimmer motor origin retrieval error When origin sensor signal is not inputted at the time of origin retrieval motion.	Turn OFF the power.	recovery
E915	((**))	Abnormality of communication between operation panel and main CPU When abnormality occurs in data communication.	Turn OFF the power.	
E916	((••))	Abnormality of communication between main CPU and main shaft CPU When abnormality occurs in data communication.	Turn OFF the power.	
E917	((**))	Failure of communication between operation panel and personal computer When abnormality occurs in data communication.	Turn OFF the power.	
E918	2-	Abnormality of temperature of heat sink for main control p.c.b. When temperature of heat sink of main control p.c.b. is 85 ° C or more.	Turn OFF the power.	
E943	⊗ ∓	Defectiveness of EEP-ROM of main control p.c.b. When data writing to EEP-ROM is not performed.	Turn OFF the power.	
E946	₩	Defectiveness of writing to EEP-ROM of head relay p.c.b. When data writing to EEP-ROM is not performed.	Turn OFF the power.	
E948	⊗ ∓	Abnormality of F ROM. When deletion or writing of F ROM is not performed at the time of downloading program.	Turn OFF the power.	
E983		When carriage does not pass sensor even when three seconds or more have passed from command to move carriage to the sewing machine side.	Turn OFF the power.	

Error code		Description of error	How to recover	Place of recovery
E984		When carriage does not pass sensor even when three seconds or more have passed from command to move carriage to Preset side.	Turn OFF the power.	
E985		Preset is not advanced. Preset is not advanced even when a specified period of time has passed from the preset advance command.	Turn OFF the power.	
E986	8	Preset is not returned. Preset is not returned even when a specified period of time has passed from the preset return command.	Turn OFF the power.	
E987		Motion error of cloth sweeping bar Cloth sweeping bar does not move to the predetermined position even when a specified period of time has passed from the cloth sweeping bar motion command.	Turn OFF the power.	
E988	=	Carriage origin retrieval error Pulses beyond the range are output at the time of carriage origin retrieval.	Turn OFF the power.	
E989		Carriage motor drive temperature error Temperature of the carriage motor drive is abnormal	Turn OFF the power.	
E999		When cloth cutting knife does not return When cloth cutting knife does not return after the lapse of predetermined time.	Turn OFF the power.	

5. MAINTENANCE MODE

5-1. PERFORMING KEY LOCK

① Display the key lock screen.

Press M key for three seconds, and the KEY LOCK button (A) is displayed on the screen. When this button is pressed down, the key lock screen is displayed. The existing setting state is displayed on the KEY LOCK button.

: State that key lock is not set

: State that key lock is set

2 Select and determine the key lock state.

Select the key lock state button (B) in the key lock setting screen, and press . Then the key lock setting screen is closed and the key lock state is set.

3 Close the mode screen and display the data input screen.

When the mode screen is closed and the data input screen is displayed, pictograph (C) 0 q showing the key lock state is displayed on the right-hand side of the pattern No. display. Besides, only the buttons which are possible to be used even in the key lock state are displayed.

5-2. DISPLAYING VERSION INFORMATION

① Display the version information screen.

When MODE key M is held pressed for three seconds,

VERSION INFORMATION button (A) is displayed

on the screen.

The version information on the sewing machine you use is displayed on the version information scren, and it is possible to check it.

B: Version information on panel program

C: Version information on main program

D: Version information on servo program

When CANCEL button (E) is pressed, the version information screen is closed and the mode screen is displayed.

5-3. USING CHECK PROGRAM

5-3-1. Displaying the check program screen

When MODE key is held pressed for three seconds, CHECK PROGRAM button (A) is displayed on the screen.

For the check program, there are 5 items below.

- 101 Needle thread trimmer origin adjustment
- -> Refer to <u>5-3-2. Performing needle thread</u> trimmer origin adjustment,p.130.
- 102 Bobbin thread trimmer origin adjustment
- -> Refer to <u>5-3-3. Performing bobbin thread</u> trimmer origin adjustment
- 103 Sensor check
- -> Refer to <u>5-3-4. Performing sensor check,p.132.</u>
- 104 LCD check
- -> Refer to <u>5-3-5. Performing LCD check,p.134.</u>
- 105 Touch panel compensation
- -> Refer to <u>5-3-6</u>. <u>Performing touch panel</u> compensation,p.135.

5-3-2. Performing needle thread trimmer origin adjustment

① Display the needle thread trimmer origin adjustment screen.

When NEEDLE THREAD TRIMMER ORIGIN

ADJUSTMENT button \$\frac{1}{2}\$\$ (A) is pressed, the needle thread trimmer origin adjustment screen is displayed.

② Perform the needle thread trimmer origin adjustment.

When OPERATION button (B) is pressed, the needle thread trimmer is actuated to the positions below and the pictograph showing the position is displayed in gray.

- C: Thread holding position (Initial value: 0 pulse)
- D: Release position (Initial position: -86 pulses)
- E: Waiting position (Initial position: 10 pulses)
- F: Thread trimming position (Initial position: 40 pulses)

Data of the respective positions can be changed with \cdot or + button \bigcirc (G \cdot H).

When ORIGIN RETRIEVAL button (I) is pressed, origin retrieval can be performed from any position.

When CANCEL button (J) is pressed, the contents of change can be memorized in EEPROM of the machine head and the screen returns to the check program.

* For the details of adjustment, refer to the Engineer's Manual for LBH-1790.

5-3-3. Performing bobbin thread trimmer origin adjustment

① Display the bobbin thread trimmer origin adjustment screen.

When BOBBIN THREAD TRIMMER ORIGIN

ADJUSTMENT button (A) is pressed, the bobbin thread trimmer origin adjustment screen is displayed.

② Perform the bobbin thread trimmer origin adjustment.

When OPERATION button (B) is pressed, the bobbin thread trimmer is actuated to the positions below and the pictograph showing the position is displayed in gray.

- C: Release position (Initial position: -22 pulses)
- D: Waiting position (Initial position: 0 pulse)
- E: Thread trimming position (Initial position: 50 pulses)
- F: Thread holding position (Initial position: 0 pulse)

Data of the respective positions can be changed with or + button $(G \cdot H)$.

When CANCEL button (J) is pressed, the contents of change can be memorized in EEPROM of the machine head and the screen returns to the check program screen.

* For the details of adjustment, refer to the Engineer's Manual for LBH-1790.

5-3-4. Performing sensor check

① Display the sensor check screen.

When SENSOR CHECK button (A) on the check program screen is pressed, the sensor check screen is displayed.

2 Perform the sensor check.

Input status of the various sensors can be checked on the sensor check screen.

Input status of each sensor is displayed as B. The display of ON status/OFF status is displayed as below.

ON status
OFF status

Press UP or DOWN SCROLL button or (C) and display the sensor which has been checked.

For the sensors, 18 kinds below are displayed.

No.	Pictograph	Description of sensor	
3⊗	اي ^م الها-	Thread breakage detection	
8 8 8 8	#	Cloth cutting knife sensor	
05 ⊗		Head tilt sensor	
06		Stop switch	
<0	>	(Head side switch)	
38		Needle rocking sensor	
888 8	<u> </u>	Sewing machine woodruff plate sensor	
09 ≪		Knee switch sensor	
10	(4)	Hand switch sensor	
1		Cloth detection sensor	
12	<u>=</u>	Carriage origin sensor	
13	H-I-	Carriage retardation position sensor	
14 ≪	─ Ť	Preset forward sensor	
15	- Į	Preset backward sensor	
16		Temporary stop switch sensor	
17 ⊘		Carriage tilt sensor	
18	**	Cloth sweeping sensor	
19 ≪	\$ 1	No. of pcs. of stacking sensor	
20		Stop switch	
$\triangleleft \mathbb{Q}$	№	(ACF main body side switch)	

5-3-5. Performing LCD check

① Display the LCD check screen.

When LCD CHECK buton (A) on the check program screen is pressed, the LCD check screen is displayed.

2 Check whether any dot of LCD is omitted.

The screen of LCD check screen is displayed by one color only. Check in this state whether any dot is omitted or not.

After checking, press a proper place on the screen. The LCD check screen is closed and the check program screen is displayed.

5-3-6. Performing touch panel compensation

① Display the touch panel compensation screen.

When TOUCH PANEL COMPENSATION button (A) on the check program screen is pressed, the touch panel compensation screen is displayed.

2 Press the lower left position.

Press red circle • (C) located at the lower left position on the screen.

When finishing the compensation, press CANCEL button (B).

3 Press the lower right position.

Press red circle • (D) located at the lower right position on the screen.

When finishing the compensation, press CANCEL button (B).

4 Press the upper left position

Press red circle • (E) located at the upper left position on the screen.

When finishing the compensation, press CANCEL button (B).

5 Press the upper right position.

Press red circle • (F) located at the upper right position on the screen.

When finishing the compensation, press CANCEL button.

6 Store the data

When 4 points have been pressed, the screen showing power-OFF prohibition is displayed since the compensation data are to be stored.

Do not turn OFF the power while this screen is being displayed.

When the power is turned OFF, the compensated data are not stored.

When storing is finished, the check program screen is automatically displayed.

5-4. Communication screen of maintenance personnel level

For the communication screen, the level which is normally used and the one which is used by the maintenance personnel are different in the kinds of data to be handled.

5-4-1. Data which are possible to be handled

In case of the maintenance personnel level, it is possible to use 5 different kinds of data in addition to the normal two kinds. The respective data formats are as below.

Data name		Extension	Description of data
Adjustment data	17Á	Model name+00XXX.MSW Example) ACF00001.MSW	Data of memory switches 1 and 2
All sewing machine data	DATA	Model name+00XXX.MSP Example) ACF00001.MSP	All data which are held by sewing machine
Panel program data (*)		IP+RVL(6 digits).PRG IM+RVL(6 digits)BHD	Program data and display data of panel
Main program data (*)		MA+RVL(6 digits).PRG	Program data of main
Servo program data (*)		MT+RVL(6 digits).PRG	Program data of servo

XXX : File No.

^{*} For panel program data, main program data and servo program data, refer to the Set-up Manual for IP-200.

5-4-2. Displaying the maintenance personnel level

① Display the communication screen of the maintenance personnel level.

When COMMUNICATION key (A) is pressed as long as three seconds, the image located at the upper left position is changed to orange color (B) and the communication screen of the maintenance personnel level is displayed.

For the operating procedure, refer to <u>3-1-4. Take-in of</u> the data,p.93.

* When the adjustment data or the all sewing data is selected, the display becomes as shown on the right-hand side and it is not necessary to specify No. on the panel side.

5-5. Information screen of the maintenance personnel level

5-5-1. Display of error record

① Display the information screen of the maintenance personnel level.

When INFORMATION key i (A) of switch seat section is pressed for approximately three seconds in the data input screen, the information screen of the maintenance personnel level is displayed.
