M800 SERIES

USER MANUAL

APPENDIX

JUMP FOOT CONVERSION

THE SEWING HEAD IS ORIGINALLY EQUIPPED WITH THE JUMP FOOT.
THE FOLLOWING INSTRUCTIONS ARE FOR REMOVAL OF THE JUMP
FOOT AND INSTALLATION OF THE LARGE PRESSER FOOT.

Tools Required (supplied in machine tool kit)

- Slot Head Screwdriver
- Allen Wrench 3/32 inch
- Allen Wrench .05 inch

STEP 1

Rotate the Handwheel so that the needle is in the UP position.

Presser Bar Lever - fig. 1

STEP 2

Lower the Presser Bar Lever to the Down position. (See fig. #1.) Remove the front cover from the Sewing Head.

STEP 3

With the Slot Head Screwdriver, remove the Thumbscrew that holds the Jump Foot Link to the Presser Bar. (See fig. Jump Foot Link.) Save the Thumbscrew for use in step 7.

Jump Foot Link - fig. 2

STEP 4

With the 3/32 inch Allen Wrench, loosen, **DO NOT REMOVE** the Socket Head Screw located on the rear of the Jump Foot. (See fig. Socket Head Screw.)

Socket Head Screw - fig. 3

STEP 5

Remove the Jump Foot/Jump Foot Link from the Presser Bar.

JUMP FOOT CONVERSION

THE SEWING HEAD IS ORIGINALLY EQUIPPED WITH THE JUMP FOOT.
THE FOLLOWING INSTRUCTIONS ARE FOR REMOVAL OF THE JUMP
FOOT AND INSTALLATION OF THE LARGE PRESSER FOOT.

STEP 6

Supplied in the machine tool kit is a Nylon Tipped Set Screw. With the .05 inch Allen Wrench, install this Set Screw into the hole in the Needle Bar Frame as shown in fig. 4. DO NOT tighten it in place yet. Push the Jump Foot Bar up until approximately 1/8 of an inch of it protrudes from the bottom of the Needle Bar Frame. (See fig. Needle Bar Frame.) Tighten the Nylon Tipped Set Screw to hold the Jump Foot Bar in place.

Needle Bar Frame - fig. 4

STEP 7

Attach the Large Presser Foot to the hole in the Presser Bar with the Thumbscrew removed in step 3. (See fig. #5.) Replace the front cover on the Sewing Head. Adjust the Large Presser Foot for desired height using the Thumbscrew. (refer to "Adjusting the Presser Foot" on Pg. 65)

Presser Foot Attachment- fig. 5

JUMP FOOT CONVERSION

THE FOLLOWING INSTRUCTIONS ARE FOR REMOVAL OF THE LARGE PRESSER FOOT AND INSTALLATION OF THE JUMP FOOT.

STEP 1

Turn the Handwheel so that the needle is in the UP position.

STEP 2

Move the Presser Bar Lever to the DOWN position. Remove the front cover of the Sewing Head.

STEP 3

With the Slot Head Screwdriver, remove the Thumbscrew that holds the Large Presser Foot to the Presser Bar. Remove the Large Presser Foot from the Presser Bar.

STEP 4

With the 0.05 inch Allen Wrench, remove the Nylon Tipped Set Screw from the Needle Bar Frame.

CAUTION:

- The nylon tipped Set Screw **MUST** be removed from the Needle Bar Frame to avoid serious damage to the Sewing Head.

STEP 5

While aligning the Jump Foot, push the Jump Foot Bar completely into the hole in the top of the Jump Foot. With the 3/32 inch Allen Wrench, tighten the Socket Head Screw at the rear of the Jump Foot to secure the Jump Foot Bar in place.

NOTE:

- Make sure that the Jump Foot Bar is fully seated by visually inspecting the bottom of the Jump Foot.

JUMP FOOT CONVERSION

THE FOLLOWING INSTRUCTIONS ARE FOR REMOVAL OF THE LARGE PRESSER FOOT AND INSTALLATION OF THE JUMP FOOT.

STEP 6

Using the slot head screwdriver, attach the Jump Foot Link to the hole on the Presser Bar with the Thumbscrew. Replace the front cover of the Sewing Head. Adjust the Jump Foot for desired height using the Thumbscrew. (refer to "Adjusting the Presser Foot", Pg. 65)

PRINTER RECOMMENDATIONS

The following printers have been tested by Meistergram and are known to work. Other models from the same manufacturer will probably work, but we cannot guarantee this. One feature to look for when selecting a particular printer model is "buffer" size. Much like humans, printers can receive (listen to) information from the computer/M800 much faster than they can print (type). A buffer holds the information temporarily and allows the computer to proceed with other commands while the printer is still printing.

EPSON: LX-800

This low cost printer should have its DIP switches configured as follows:

1-1	off	(normal characters)	1-7	on	(select USA character set)
1-2	off	*(unslashed zero)	1-8	on	(select USA character set)
1-3	off	(italics characters)	2-1	off	(11 inch page)
1-4	off	(do detect paper out)	2-2	off	(no cut sheet feeder)
1-5	off	*(draft print quality)	2-3	off	(no perforation skip)
1-6	on	(select USA char. set)	2-4	off	(no AUTO carriage return)

* means optional

HEWLETT PACKARD: LASER JET II

This laser printer is expensive, but gives very high quality printouts. The printouts, however, will be smaller than the other printers. Make sure the printer is set for PARALLEL operation and IBM character set is selected. THIS PRINTER HAS A DIFFERENT ASPECT RATIO and ANY PRINTOUTS in a screen scale OTHER than "4PRINTER" WILL BE DISTORTED! No correction for this will be made in software.

M800 SERIES

USER MANUAL

APPENDIX B: HAT CLAMP

CAP FRAME

The cap frame accessory kit provides the parts you need to produce high quality monogrammed caps quickly and efficiently. Use the following instructions to get the best results:

PAGE	TOPIC
B-2	Introduction
B-3	Cap Frame Parts
B-4	Remove Table Insert
B-4	Install Raised Throat Plate
B-5	Install Cap Frame Drive onto XLC
B-6	Set Sewing Field (on Adjustable Frame)
B-7	Load Cap onto Frame
B-8	Load Frame onto Drive
B-9	Adjust Jump Foot Height
B-10	Final Steps

Use the following CheckList as a reminder of the steps needed to setup your machine to sew hats:

CAP FRAME CHECKLIST

- ☐ Remove Table Top Insert
- ☐ Install Raised Throat Plate
- ☐ Install Cap Frame Drive Unit
- ☐ Set Sewing Field (on Adjustable Frame)
- ☐ Load Cap onto Frame
- ☐ Load Frame onto Drive Unit
- ☐ Re-Adjust Jump/Presser Foot Height
- ☐ Use "H" Hat Mode command, or program Upside/Down/Backwards
- ☐ Program Monogram
- ☐ Preview
- ☐ Perimeter Trace (watch out for lower case letters!)

MEISTERGRAM CAP FRAME KIT PARTS

The Cap Frame kit is an accessory for your XLC machine and is included in your supply kit (shipped separately from the machine). The Cap Frame Kit is also available as Meistergram Part Number B95400000.

Locate and identify the following parts- which are illustrated below.

QTY	ITEM NUMBER	DESCRIPTION
1	B9540028	DRIVE UNIT
2	B95200010	ADJUSTABLE FRAME
1	B95200100	FRAMING DEVICE
2	B95400109	C-CLAMP

Cap Frame Kit Parts - Fig. 1

MACHINE SETUP FOR CAP FRAME:

1. REMOVE TABLE INSERT

Grasp the removeable portion of the table top firmly with both hands. Pull straight out and away from the sewing head. This reveals the cylinder arm, as well as additional space needed for installation of the cap frame.

2. INSTALL RAISED THROAT PLATE

Two types of throat plates are provided with the 800XLC machine- a flat throat plate and a raised throat plate (see fig #2.) The **Flat Throat Plate** is used with all hooped and clamped garments when monogramming with the standard table top. The **Raised Throat Plate** must be used when monogramming baseball caps with the cap frame and open table top.

TO CHANGE THROAT PLATE

Step 1:

(See fig. #3) Remove the two screws securing the flat throat plate to the cylinder arm. Remove flat throat plate and put in a safe place.

Step 2:

Line up the raised throat plate over the end of the cylinder arm, insert the two screws and tighten.

Throat Plate Types - fig 2

FLAT

RAISED

Installing Throat Plate - fig 3

3. INSTALL CAP FRAME DRIVE UNIT ONTO THE XLC

Step 1:

Attach cap frame bar (black bar) to pantograph bar with two screws provided. The screws should be left loose so the cap frame bar can be correctly lined up.

Step 2:

Slide drive unit over cylinder arm, the pivot bar should slide easily into the center shaft of drive unit (see fig. # 4)

Step 3:

If binding starts to occur remove the drive unit, line up with pivot shaft a second time and try again.

Step 4:

Once the drive unit is in position the cap frame bar must be aligned perfectly parallel with the drive unit. Use the edge of the table top as a guide (see fig. #5.)

Step 5:

When the desired position is found, tighten the two screws on the cap frame bar snugly.

Step 6:

Once parallel, tighten two black thumbscrews to secure drive unit to cap frame bar.

Align Cap Frame Bar - fig 5

Slide Drive Unit onto machine -
fig 4

Note:

- cap frame bar and drive unit must be parallel or binding may occur during the sewing process, causing distortion to the embroidery. Double check after extensive use of the cap frame. Realign if necessary.

4. SET THE ADJUSTABLE FRAME'S SEWING FIELD

The adjustable frame is normally shipped in its closed position- which is its smallest sewing field. To adjust the frame for your caps, follow these steps:

Step 1.

Loosen the two straight screws on either side of the adjustable frame (see fig. #6.) The slotted portion will slide open when the screws have been loosened. The maximum sewing field size is 2-1/4"x 6" when the cap frame is adjusted fully open. This allows 1/4" clearance for the presser foot.

Step 2.

Once the desired position is found tighten the 4 set screws snugly.

Adjusting the Sewing Field - fig 6

5. LOAD CAP ONTO FRAME

STEP 1.

The framing device should be securely fastened to a table by using the C-Clamps supplied in your kit.

STEP 2.

Located on the right hand side of the framing device is a metal lever which should be in the down position.

STEP 3.

Holding onto the red handle, secure the frame onto the framing device, by pushing firmly to lock the ball bearings into the pre-cut holes on the frame. Remember to push the metal lever up (closed) to lock in the frame.

STEP 4.

Push up and out on the red handle, to open cap frame. Hold the inner sweatband on the underside of the cap and fold outward, holding the sweatband out, slide the cap over the adjustable frame so the front of the cap is located in the center of the sewing field area. Insert the sweatband seam into the slot of the capframe. (For a center guide, align the top seam of the cap with the metal notch at the top of the handle.)

STEP 5.

Push up on the red handle and lock the bar into place.

STEP 6.

Secure the bill of the cap under the elastic strap to eliminate possible shifting.

STEP 7.

The plastic adjustable strap on the back of the cap should be secured under the silver hook located on the bottom of the adjustable frame.

STEP 8.

Pull down on the sides of the cap for a tight smooth fit. Like all monogrammed items, caps must be framed tightly.

STEP 9.

Release metal clip (down position) on the right hand side of the framing device, then pull the cap frame off the framing device by pulling on the red handle.

6. LOAD THE ADJUSTABLE FRAME ONTO DRIVE UNIT

STEP 1.

Be sure the metal lever on the drive unit is in the down position (open). Holding onto the red handle, secure the frame into the drive unit by pushing firmly to lock the ball bearings into the pre-cut holes on the frame. You should hear it lock into place.

STEP 2.

Push metal lever up into its closed and locked position. You are now ready to monogram your cap. Remember your maximum sewing field is 2 1/4" x 6". It is advisable to perimeter trace for each new program to insure a safe sewing path.

Loading Frame Onto Drive Unit - fig 7

NOTE:

- Be careful not to add too much pressure when attaching the frame, this could result in misalignment of the black frame bar. Check for needed adjustments.

CAUTION:

- Make sure drive unit clip is in the closed and locked position (up) when machine is sewing or repositioning cap frame. Otherwise the silver clip will catch on machine frame.
- Drive unit should be disconnected from cap frame bar (black bar) when centering pantograph to avoid damage to drive unit.

7. ADJUST JUMP FOOT HEIGHT

Whenever you change fabrics, you should adjust the Jump Foot Height; installing the Raised Throat Plate makes this adjustment especially important.

Step 1

Turn the motor safety switch OFF.

Step 2

Attach the material to be monogrammed.

Step 3

Make sure the jump (presser) foot lift lever is in the down position.

Step 4

Rotate the handwheel until the presser foot reaches its lowest point of travel.

Step 5

Loosen the jump foot thumbscrew, then manually slide the jump foot up or down as required until the jump foot is lightly pressing on the fabric.

FINAL STEPS

"H" HAT MODE COMMAND

The "H" command (Hat Mode- described on page 196-A) will program the machine to sew Upside/Down/Backwards ("U") (since the caps are inserted upside/down into the machine), will set the pantograph position to the approximate center of the sewing field, and display a checklist of these hat clamp installation procedures.

PROGRAM MONOGRAM

Program your monogram as normal, but keep in mind that the sewing area is 2-1/4" by 6". Remember that Arching will add to the height of your monogram.

PREVIEW

Preview your monogram: the outline shown on the preview is for the cap frame adjusted to its largest sewing field!

PERIMETER TRACE

Make sure your monogram will fit in the cap frame sewing field: Perimeter Trace each new monogram program. If your monogram has letters that sew below the baseline (lower case j, g, p etc.) you may want to trace the sewing path too.

CAUTION:

- Remember that the small foot gives more sewing area. If you use the large foot, leave more clearance.
- Due to mechanical differences between hat clamp frames, and the adjustments, **PREVIEW** and **PERIMETER TRACE EACH HAT** to avoid damage to your Hat Frame and Sewing head.
