

For those who live their Craft®

FOR THOSE WHO LIVE THEIR CRAFT®

Clauss® tools have been the choice of professionals since 1877. Discriminating home users have also treasured these classic tools, passing them along through generations. Our professional heritage means Clauss tools are engineered for the demands of continuous daily use.

Our cutlery and tools are made of superior-grade steel and are through-hardened to hold an edge, cut smoothly and withstand repeated sharpening. Clauss True Professional® products will withstand the toughest task and continue delivering over extended use.

Task-driven solutions, innovation and commitment to the Clauss heritage will delight existing and future generations of loyal users.

Terminology

Titanium Bonded™

Titanium Bonded is not painted or plated, but an application of a unique formulation of titanium and chromium nitride to the surface of cutting blades that actually penetrates and treats the metal to create a permanent bond. The Titanium Bonding process provides the following benefits; corrosion resistance, adhesive resistance and the process itself makes the stainless steel 3X harder than untreated stainless providing a blade that stays sharper longer.

Hot-Forged

Clauss® continues to hot-forged its tools to produce a superior product from high quality rods or strips of steel, heated in a furnace and then forged from a drop hammer into the desired shape. This is an expensive process, but it is recognized as the best method to produce quality tools.

Thru-Hardened

All Clauss hot-forged scissors and shears are thru-hardened, rather than case-hardened, which only hardens the surface. Having thru-hardened scissors and shears means that after re-sharpening, you still have a hard steel blade, and scissors and shears that will hold their edge and can be re-sharpened.

Heat-Inducted Blades

Heat Induction is a triple-heat process. The base steel is heated, then the steel supporting the blade edges and a final heat treatment on the blade edges providing up to a 62Rc. This triple-heat process is a precise heating technology to a specific area of the blades providing a stronger, longer lasting cutting edge.

Certified Double-Plated

Clauss has *always* double-plated its hot-forged tools using nickel for luster and chrome for durability, ensuring you a product that is rust and stain resistant. The Clauss process is costly, but ensures you a product with maximum service life and is your guarantee that they are the very best available.

*Clauss retail Clamshell and Blister packages are made of post-consumer recycled content and PETE recycled plastics.

High Carbon Cutlery Grade Steel

Quality tools start with quality steel. The more carbon in the steel, the longer the life of the tool. Cutlery grade steel usually means high uniformity and strict control over trace elements in the steel. Clauss uses high carbon cutlery steel to ensure the best quality tools possible.

Molybdenum Steel

Clauss also makes shears with high grade molybdenum alloy steel for those who need tools for extra heavy cutting. When hardened, molybdenum steel forms a very durable, tough, and uniform grain structure. This gives our "Moly" shears' blades excellent holding characteristics, which prolongs useful life even when used for heavy duty cutting.

Knife Edge

"Knife edge" shears have a more acute angle on the cutting edge than "regular edged" shears. They make cutting thick, dense materials such as carpet easier and put less stress and fatigue on the user.

Heavy Duty

Wider, thicker blades help prevent spreading at the tips and give full cutting action even when cutting thick, dense materials. In addition, the over-sized and adjustable nut and bolt assembly reduces flex and adds rigidity, transferring the power to the cutting edges.

High Leverage / Clauss Backbone

Extra cutting power is developed by changing the normal power ratio of the tool. Clauss provides the ultimate in high-leverage cutting by increasing the back-bone width of the blade so you get high performance and still retain the full length of cut you need.

Serration

Some material and round objects (such as sheet metal, Kevlar® or wire) tend to slip ahead of the cutting blades. Serrated blades allow the jaws to grip and cut. The types of serration Clauss uses on its tools have proven to be adjusted specifically for the task at hand.

SureSet®

A premium adjustable fastener that provides a locking pivot. It reduces friction when opening and closing, and allows tension adjustment with only one hand.

Lifetime Warranty

At Clauss our legendary products are supported by an equally legendary promise. If your Clauss product fails to perform due to defects in materials or workmanship, we will replace it regardless of age. Normal wear, sharpening, industrial use or abuse, misuse or neglect is not covered. Defective products will be repaired, replaced or substituted with the same product or one of equal value. Send the product in its original box for proof of purchase along with an explanation of defect. Other consumer rights may vary from state to state. Replacement blades are excluded from the lifetime warranty.

SpeedPak™

Truly unique! SpeedPak is a cartridge based utility knife that allows for quick, easy and safe blade changes. Each cartridge holds 10 Titanium Bonded™, double-edged blades that are 3x harder than steel and stay sharper longer. Strong enough for industrial environments and simple enough for everyday use.

Item #18038 **Clamshell**

Winner of a 2007 Good Design Award.
As awarded by The Chicago Athenaeum:
Museum of Architecture and Design

Hot Forged Scissors & Shears

Heavy Duty Straight Shears

Extra Long and Extra Strong Hot Forged Shears used for large jobs such as wallpaper & blueprints. Two Sharp points.

Item #10300 10" Bulk

Item #10320 12" Bulk

Hot Forged of high quality cutlery steel, these are Extra High Leverage Shears with the cutting power to handle thick, dense materials. Wide, thick body blades prevent spreading at the tips.

8" Shears

- Flat Lower Tip
- Extra Large Lower Bow
- Great for Paramedics/bandages

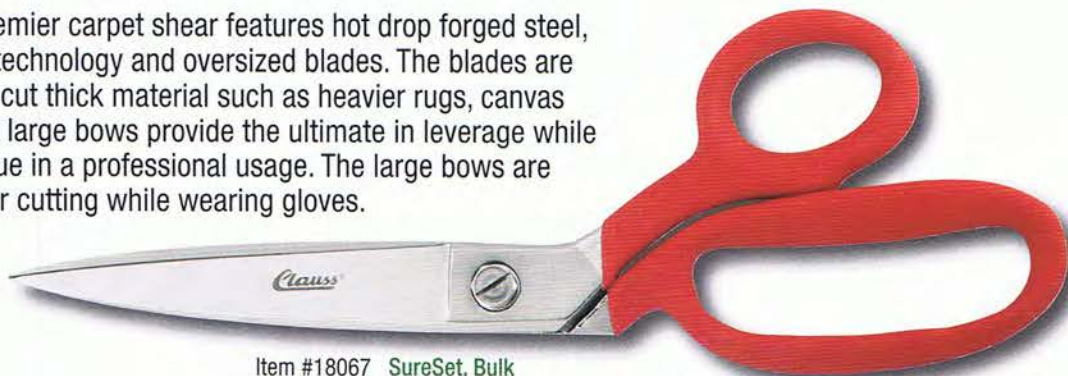

Item #11330 Straight, Bulk

Item #11339 Bent, Bulk

11.5" Big Bow Shear

The Clauss premier carpet shear features hot drop forged steel, our SureSet® technology and oversized blades. The blades are engineered to cut thick material such as heavier rugs, canvas and rubber. Its large bows provide the ultimate in leverage while reducing fatigue in a professional usage. The large bows are also perfect for cutting while wearing gloves.

Item #18067 SureSet, Bulk

Hot Forged Scissors & Shears

Offset Handle Shears

Hot Forged of high quality carbon steel, thru-hardened and double-plated with chrome over nickel for long-life. These Carpet/Rug Shears have offset handles for trimming pile and cutting in tough, hard-to-reach places. Sharp blades and points, high leverage. Will cut and trim carpeting and hooked rugs.

Item #11240

Molybdenum Steel, SureSet®, Bulk

Item #11270
7.75" Lightweight Model, Bulk

Scissors with Duckbill Blades

Nap Shears feature a duckbill blade that is flat to avoid gouging. Hot Forged carbon steel blades with offset handles for level cutting.

Item #12500C 6" Bulk

Item #12490
7" Vinyl Coated Handles, Bulk

Titanium Bonded™ Snips & Pruners

8" Titanium Bonded™ Snip & Pruner

These high quality snips & pruners have oversized Titanium Bonded blades that are 3x harder than steel and stay sharper, longer. Blades will resist corrosion & adhesives. Top blade is micro-serrated for true "grip & cut" performance. Glass filled nylon, ergonomic handles for comfort.

- Spring-assisted to reduce fatigue
- Internal spring won't break or need to be replaced
- Internal locking mechanism
- One-handed operation

Item #18040
Pruner, Clamshell

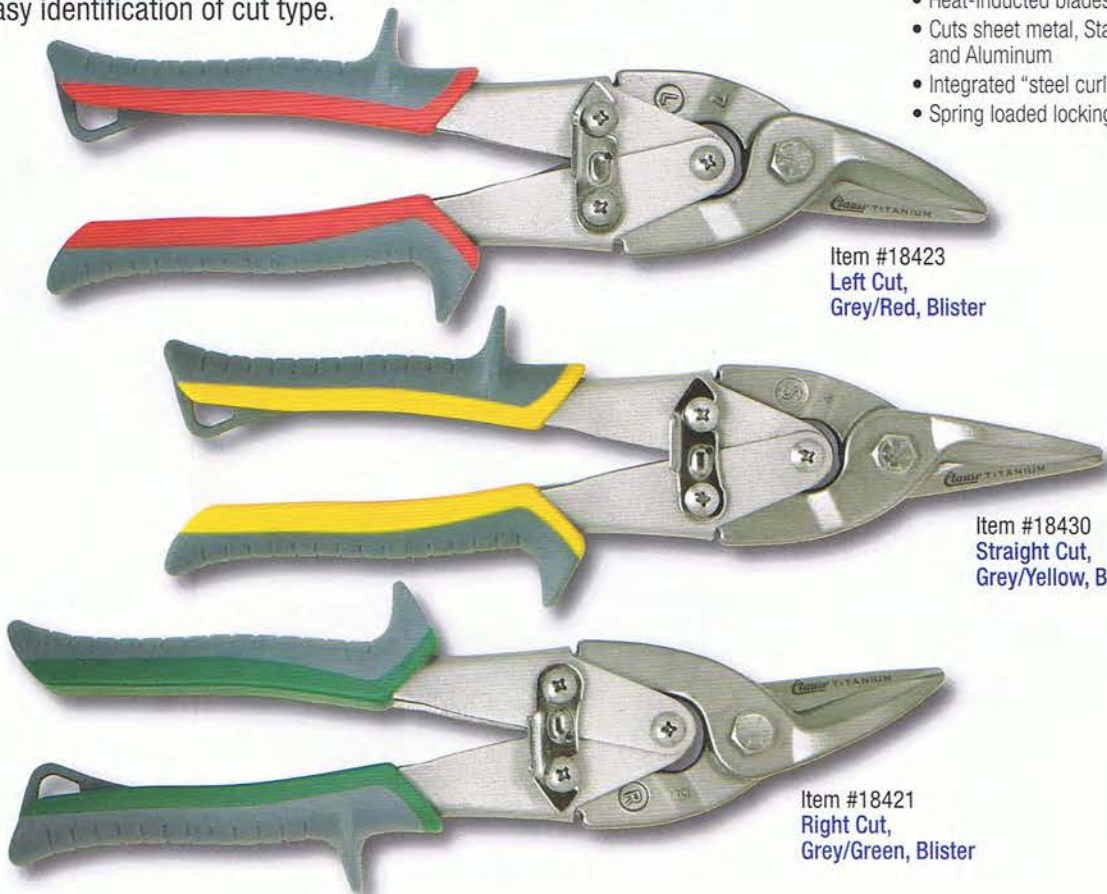

Item #18039
Snip, Integrated Wire Cutter, Clamshell

Titanium Bonded Aviation Snips

Titanium Bonded Aviation Snips will bite through sheet metal quickly and easily. The blades are 3x harder than steel alone and will stay sharper, longer. Resists corrosion and adhesives. Serrated blades prevent slip-out. Sturdy handles and pivot points. Color-coded for easy identification of cut type.

- Heat-induced blades
- Cuts sheet metal, Stainless and Aluminum
- Integrated "steel curl design"
- Spring loaded locking mechanism

Steel Snips & Pruners

8" Snips with Wire Cutting Notch

Industrial Stainless Steel Snips designed to cut plastic, wire, rope, rubber, cardboard and more. Precision ground blades with serration for grip & cut performance. Handles and tension are adjustable. Non-slip, spring assisted grips. Perfect for electrical use as well as cutting Kevlar® materials. Includes notch for cutting wire.

Item #18085 Straight, Clamshell

Item #18086 Bent, Clamshell

Designed for floral applications, these are also quality all-around tools. Brushed Stainless Steel Blades and comfortable hand grips. Spring-assisted to provide precise cutting and control. Locking mechanism. Micro-serrated blades for grip & cut performance.

Straight Blade Snip

- Made for precision cuts.

Item #18047 8" Long Blades, Clamshell

- For cutting light wire, wire ribbons, stems, dried materials.

Item #18048 7.5" Short Blades, Clamshell

- For short cuts in tight areas

7" Pruner

- For cutting thick stems, flowers, rope, glue sticks and more.
- Cuts wet or dry materials.

Item #18049 Clamshell

SNIPS & PRUNERS
